

Preface

The requirements for the assessment of real property for the purposes of property taxation are found in Nebraska law. The Constitution of Nebraska requires that “taxes shall be levied by valuation uniformly and proportionately upon all real property and franchises as defined by the Legislature except as otherwise provided in or permitted by this Constitution.” Neb. Const. art. VIII, sec. 1 (1) (1998). The uniform standard for the assessed value of real property for tax purposes is actual value, which is defined by law as “the market value of real property in the ordinary course of trade.” Neb. Rev. Stat. §77-112 (R.R.S., 2003). The assessment level for all real property, except agricultural land and horticultural land, is one hundred percent of actual value. The assessment level for agricultural land and horticultural land, hereinafter referred to as agricultural land, is seventy-five percent of actual value. Neb. Rev. Stat. §77-201(1) and (2)(R.S. Supp., 2007). More importantly, for purposes of equalization, similar properties must be assessed at the same proportion of actual value when compared to each other. Achieving the constitutional requirement of proportionality ultimately ensures the balance equity in the imposition of the property tax by local units of government on each parcel of real property.

The assessment process, implemented under the authority of the county assessor, seeks to value similarly classed properties at the same proportion to actual value. This is not a precise mathematical process, but instead depends on the judgment of the county assessor, based on his or her analysis of relevant factors that affect the actual value of real property. Nebraska law provides ranges of acceptable levels of value that must be met to achieve the uniform and proportionate valuation of classes and subclasses of real property in each county. Neb. Rev. Stat. §77-5023 (R.S. Supp., 2007) requires that all classes of real property, except agricultural land, be assessed within the range of ninety-two and one hundred percent of actual value; the class of agricultural land be assessed within the range of sixty-nine to seventy-five percent of actual value; the class of agricultural land receiving special valuation be assessed within the range sixty-nine to seventy-five percent of its special value; and, when the land is disqualified for special value the recapture value be assessed at actual value.

To ensure that the classes of real property are assessed at these required levels of actual value, the Department of Revenue Property Assessment Division, hereinafter referred to as the Division, is annually responsible for analyzing and measuring the assessment performance of each county. This responsibility includes requiring the Property Tax Administrator to prepare statistical and narrative reports for the Tax Equalization and Review Commission, hereinafter referred to as the Commission, and the county assessors. Pursuant to Neb. Rev. Stat. §77-5027 (R.S. Supp., 2005):

(2) ... the Property Tax Administrator shall prepare and deliver to the commission and to each county assessor his or her annual reports and opinions.

(3) The annual reports and opinions of the Property Tax Administrator shall contain statistical and narrative reports informing the commission of the level of value and the quality of assessment of the classes and subclasses of real property within the county and a certification of the opinion of the Property Tax

Administrator regarding the level of value and quality of assessment of the classes and subclasses of real property in the county.

- (4) In addition to an opinion of level of value and quality of assessment in the county, the Property Tax Administrator may make nonbinding recommendations for consideration by the commission.

The narrative and statistical reports contained in the Reports and Opinions of the Property Tax Administrator, hereinafter referred to as the R&O, provide a thorough, concise analysis of the assessment process implemented by each county assessor to reach the levels of value and quality of assessment required by Nebraska law. The Property Tax Administrator's opinion of level of value and quality of assessment achieved by each county assessor is a conclusion based upon all the data provided by the county assessor and gathered by the Division regarding the assessment activities during the preceding year. This is done in recognition of the fact that the measurement of assessment compliance, in terms of the concepts of actual value and uniformity and proportionality mandated by Nebraska law, requires both statistical and narrative analysis.

The Division is required by Neb. Rev. Stat. §77-1327 (R. S. Supp., 2007) to develop and maintain a state-wide sales file of all arm's length transactions. From this sales file the Division prepares an assessment sales ratio study in compliance with acceptable mass appraisal standards. The assessment sales ratio study is the primary mass appraisal performance evaluation tool. From the sales file, the Division prepares statistical analysis from a non-randomly selected set of observations, known as sales, from which inferences about the population, known as a class or subclass of real property, may be drawn. The statistical reports contained in the R&O are developed in compliance with standards developed by the International Association of Assessing Officers, hereinafter referred to as the IAAO.

However, just as the valuation of property is sometimes more art than science, a narrative analysis of assessment practices in each county is necessary to give proper context to the statistical inferences from the assessment sales ratio study. There may be instances when the analysis of assessment practices outweighs or limits the reliability of the statistical inferences of central tendency or quality measures. This may require an opinion of the level of value that is not identical to the result of the statistical calculation. The Property Tax Administrator's goal is to provide statistical and narrative analysis of the assessment level and practices to the Commission, providing the Commission with the most complete picture possible of the true level of value and quality of assessment in each county.

The Property Tax Administrator's opinions of level of value and quality of assessment are stated as a single numeric representation for level of value and a simple judgment regarding the quality of assessment practices. Based on the information collected in developing this report the Property Tax Administrator may feel further recommendations must be stated for a county to assist the Commission in determining the level of value and quality of assessment within a county. These opinions are made only after considering all narrative and statistical analysis provided by the county assessor and gathered by the Division. An evaluation of these opinions must only be made after considering all other information provided in the R&O.

Finally, after reviewing all of the information available to the Property Tax Administrator regarding the level and quality of assessment for classes and subclasses of real property in each county, the Property Tax Administrator, pursuant to Neb. Rev. Stat. §77-5027(4) (R.S. Supp., 2005), may make recommendations for adjustments to value for classes and subclasses of property. All of the factors relating to the Property Tax Administrator's determination of level of value and quality of assessment shall be taken into account in the making of such recommendations. Such recommendations are not binding on the Commission.

Opinions

2008 Opinions of the Property Tax Administrator for Buffalo County

My opinions and recommendations are stated as a conclusion based on all of the factors known to me about the assessment practices and statistical analysis for this county. See, Neb. Rev. Stat. §77-5027 (R. S. Supp., 2005). While I rely primarily on the median assessment sales ratio from the Qualified Statistical Reports for each class of real property, my opinion of level of value for a class of real property may be determined from other evidence contained in the RO. Although my primary resource regarding quality of assessment are the performance standards issued by the IAAO, my opinion of quality of assessment for a class of real property may be influenced by the assessment practices of the county assessor.

Residential Real Property

It is my opinion that the level of value of the class of residential real property in Buffalo County is 97% of actual value. It is my opinion that the quality of assessment for the class of residential real property in Buffalo County is in compliance with generally accepted mass appraisal practices.

Commercial Real Property

It is my opinion that the level of value of the class of commercial real property in Buffalo County is 97% of actual value. It is my opinion that the quality of assessment for the class of commercial real property in Buffalo County is in compliance with generally accepted mass appraisal practices.

Dated this 7th day of April, 2008.

Ruth A. Sorensen
Property Tax Administrator

Buffalo County 2008 Assessment Actions taken to address the following property classes/subclasses:

Residential

The Buffalo County Appraisal Five Year Plan was utilized for review purposes. Starting in March 2007, on-site review work was begun. By the end of 2007, field appraisers were ahead of the parcels in the plan and actually reviewing some of the 2008 planned review.

For the first time, a new technique was also used that involved techniques learned at the IAAO annual conference in Milwaukee. Selected market areas were entered into a spreadsheet showing the property characteristics, sales, assessment values, etc. and mailed to all property owners in that market area. In this manner, each owner had an easy way to check their assessment file and to compare valuation with other property.

From a sampling (sales reviews in that area) a determination of percent of basement finish was determined. Each property owner was asked to contact us for an internal review if their property **did not** have this percentage of basement finish. For 2008, the percentage of basement finish was updated to this percentage or the results of the internal review, if requested.

Sales reviews were completed for new sales. This review was used to *revise* future review plans and for statistical reviews as described in the previous paragraph. Protest reviews were completed for each protest. This always involves on-site review with new digital pictures and an interior review is requested. A notebook is prepared for each County Supervisor for protest hearings with a copy of the protest, property record card and finding from the review with color pictures. The protest review may also result in revisions to the Three Year Review Plan, including the current year.

All new construction is picked up prior to the end of the year. Zoning permits are received from various towns and from the County Zoning Department.

2008 Assessment Survey for Buffalo County

Residential Appraisal Information

(Includes Urban, Suburban and Rural Residential)

1.	Data collection done by:
	Appraisal Staff
2.	Valuation done by:
	The Assessor is responsible for the final determination of value, Joe Woodward.
3.	Pickup work done by whom:
	The appraisal staff
4.	What is the date of the Replacement Cost New data (Marshall-Swift) that are used to value this property class?
	June 2007
5.	What was the last year the depreciation schedule for this property class was developed using market-derived information?
	All were reviewed and updated if necessary for 2008
6.	What was the last year that the Market or Sales Comparison Approach was used to estimate the market value of the properties in this class?
	2007
7.	Number of market areas/neighborhoods for this property class:
	There are many urban market areas (and numerous subclasses within each market area, the majority of these are located within the City of Kearney. There are 7 suburban areas and 13 rural market areas for the residential class of property.
8.	How are these defined?
	The market areas are primarily defined geographically and by property characteristics.
9.	Is “Assessor Location” a usable valuation identity?
	No
10.	Does the assessor location “suburban” mean something other than rural residential? (that is, does the “suburban” location have its own market?)
	2 Mile radius around the City of Kearney

11.	What is the market significance of the suburban location as defined in Reg. 10-001.07B? (Suburban shall mean a parcel of real property located outside of the limits of an incorporated city or village, but within the legal jurisdiction of an incorporated city or village.)
	Due to the zoning regulations, the quality of the houses is different between the urban, suburban and rural locations resulting in market influences.
12.	Are the county's ag residential and rural residential improvements classified and valued in the same manner?
	Yes, within each defined market area

Residential Correlation

2008 Correlation Section for Buffalo County

Residential Real Property

I. Correlation

RESIDENTIAL: The following tables offer support of the calculated median as the official level of value for residential property in Buffalo County. The assessment actions reflect valuation changes that occurred in the county.

Discussion throughout the past year between the Buffalo County Assessor and his state liaison have revealed that even though there is an appraisal staff separate from the assessment staff; the Assessor is knowledgeable with all types of property in his county and the valuation trends, problem areas, statistical reviews and economic outlook in his county as well as in the State of Nebraska.

Progress was made this year in electronic communication with the Assessor at times able to access his email and the AVU and abstract were submitted electronically. It would be beneficial to the county to implement procedures to transfer the sales data electronically as well as increase accuracy within the state sales file. It also would be beneficial to the taxpayers in Buffalo County to have a website accessible for parcel information.

Buffalo County is a county experiencing growth throughout its diverse community. The large city of Kearney with the many market neighborhoods poses valuation challenges as do the smaller communities in the county. The Buffalo County Assessor and his staff have done a good job being proactive to the market. There are no areas to suggest a recommendation should be made by the state as to the residential valuations for Buffalo County and statistical evidence follows that lends its support to a level of value for residential property at 97% of the market.

2008 Correlation Section for Buffalo County

II. Analysis of Percentage of Sales Used

This section documents the utilization of total sales compared to qualified sales in the sales file. Neb. Rev. Stat. §77-1327(2) (R. S. Supp., 2007) provides that all sales are deemed to be arm's length transactions unless determined to be otherwise under professionally accepted mass appraisal techniques. The county assessor is responsible for the qualification of the sales included in the residential sales file. The Division periodically reviews the procedures utilized by the county assessor to qualify/disqualify sales.

The Standard on Ratio Studies, International Association of Assessing Officials, (2007), indicates that low levels of sale utilization may indicate excessive trimming by the county assessor. Excessive trimming, the arbitrary exclusion or adjustment of arm's length transactions, may indicate an attempt to inappropriately exclude arm's length transactions to create the appearance of a higher level of value and quality of assessment. The sales file, in a case of excess trimming, will fail to properly represent the level of value and quality of assessment of the population of residential real property.

	Total Sales	Qualified Sales	Percent Used
2008	2228	2084	93.54
2007	2391	2232	93.35
2006	2415	2227	92.22
2005	2427	2262	93.2
2004	2311	2180	94.33
2003	2104	1990	94.58
2002	2072	1954	94.31
2001	2024	1921	94.91

RESIDENTIAL: When looking at all past years, the fluctuation in the percentage of sales used in Buffalo County is minimal. The range of 92.22% to 94.91% reflects that Buffalo County has established set procedures for sales verification and set parameters for disqualification of a sale from the state sales file. Buffalo County chooses to not disqualify many sales that would be deemed influenced by other counties. But because of the historical use of these sales and the adherence to their policies, the influence is diminished by standardized inclusion of these sales. They do not pick and choose sales to disqualify but rather follow the set procedure in the county. A review of the total residential sales in Buffalo County shows no sales were coded out for having substantially changed. This would appear to be a misuse of the coding rather than an actual representation that of 2,228 none were substantially changed since the time of the sale.

2008 Correlation Section for Buffalo County

III. Analysis of the Preliminary, Trended Preliminary and R&O Median Ratio

The trended preliminary ratio is an alternative method to calculate a point estimate as an indicator of the level of value. This table compares the preliminary median ratio, trended preliminary median ratio, and R&O median ratio, presenting four years of data to reveal any trends in assessment practices. The analysis that follows compares the changes in these ratios to the assessment actions taken by the county assessor. If the county assessor's assessment practices treat all properties in the sales file and properties in the population in a similar manner, the trended preliminary ratio will correlate closely with the R&O median ratio. The following is the justification for the trended preliminary ratio:

Adjusting for Selective Reappraisal

The reliability of sales ratio statistics depends on unsold parcels being appraised in the same manner as sold parcels. Selective reappraisal of sold parcels distorts sales ratio results, possibly rendering them useless. Equally important, selective reappraisal of sold parcels ("sales chasing") is a serious violation of basic appraisal uniformity and is highly unprofessional. Oversight agencies must be vigilant to detect the practice if it occurs and take necessary corrective action.

[To monitor sales chasing] A preferred approach is to use only sales that occur after appraised values are determined. However, as long as values from the most recent appraisal year are used in ratio studies, this is likely to be impractical. A second approach is to use values from the previous assessment year, so that most (or all) sales in the study follow the date values were set. In this approach, measures of central tendency must be adjusted to reflect changes in value between the previous and current year. For example, assume that the measure of central tendency is 0.924 and, after excluding parcels with changes in use or physical characteristics, that the overall change in value between the previous and current assessment years is 6.3 percent. The adjusted measure of central tendency is $0.924 \times 1.063 = 0.982$. This approach can be effective in determining the level of appraisal, but measures of uniformity will be unreliable if there has been any meaningful reappraisal activity for the current year.

Gloudemans, Robert J., Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), p. 315.

for Buffalo County**

III. Analysis of the Preliminary, Trended Preliminary and R&O Median Ratio Continued

	Preliminary Median	% Change in Assessed Value (excl. growth)	Trended Preliminary Ratio	R&O Median
2008	95.63	3.45	98.93	97.47
2007	95.60	6.91	102.21	97.78
2006	95.52	8.35	103.5	97.44
2005	95.78	7.01	102.5	98.34
2004	97.15	6.39	103.36	98.57
2003	96	5.23	101.02	98
2002	96	3.07	98.95	98
2001	95	4.16	98.95	98

RESIDENTIAL: Table 3 illustrates that the residential values when trended from the previous year arrive at a ratio very similar to the R & O Ratio. The conclusion may be drawn that the residential population and the residential sales were treated uniformly. The trended ratio offers strong support for the calculated level of value at 97.47% of market and either the calculated ratio or the trended ratio could be used to call a level of value for residential property in Buffalo County.

2008 Correlation Section for Buffalo County

IV. Analysis of Percentage Change in Total Assessed Value in the Sales File to Percentage Change in Assessed Value

This section analyzes the percentage change of the assessed values in the sales file, between the 2008 Preliminary Statistical Reports and the 2008 R&O Statistical Reports, to the percentage change in the assessed value of all real property base, by class, reported in the 2008 County Abstract of Assessment for Real Property, Form 45, excluding growth valuation, compared to the 2007 Certificate of Taxes Levied (CTL) Report. For purposes of calculating the percentage change in the sales file, only the sales in the most recent year of the study period are used. If assessment practices treat sold and unsold properties consistently, the percentage change in the sales file and assessed base will be similar. The analysis of this data assists in determining if the statistical representations calculated from the sales file are an accurate measure of the population. The following is justification for such an analysis:

Comparison of Average Value Changes

If sold and unsold properties are similarly appraised, they should experience similar changes in value over time. Accordingly, it is possible to compute the average change in value over a selected period for sold and unsold parcels and, if necessary, test to determine whether observed differences are significant. If, for example, values for vacant sold parcels in an area have increased by 45 percent since the previous reappraisal, but values for vacant unsold parcels have increased only 10 percent, sold and unsold parcels appear to have not been equally appraised. This apparent disparity between the treatment of sold and unsold properties provides an initial indication of poor assessment practices and should trigger further inquiry into the reasons for the disparity.

Gloudemans, Robert J., Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), p. 311.

**2008 Correlation Section
for Buffalo County**

IV. Analysis of Percentage Change in Total Assessed Value in the Sales File to Percentage Change in Assessed Value Continued

% Change in Total Assessed Value in the Sales		% Change in Assessed Value (excl. growth)
4.05	2008	3.45
3.39	2007	6.91
3.87	2006	8.35
7.34	2005	7.01
1.01	2004	6.39
3.26	2003	5.23
4.19	2002	3.07
3.38	2001	4.16

RESIDENTIAL: Table 4 illustrates similar movement between the sales file and the base value. This offers support that either the calculated median or the trended median for residential property is an accurate reflection of the level of value in Buffalo County. It also indicates that the class of property has been valued uniformly.

2008 Correlation Section for Buffalo County

V. Analysis of the R&O Median, Wgt. Mean, and Mean Ratios

There are three measures of central tendency calculated by the Division: median ratio, weighted mean ratio, and mean ratio. Since each measure of central tendency has strengths and weaknesses, the use of any statistic for equalization should be reconciled with the other two, as in an appraisal, based on the appropriateness in the use of the statistic for a defined purpose, the quantity of the information from which it was drawn, and the reliability of the data that was used in its calculation. An examination of the three measures can serve to illustrate important trends in the data if the measures do not closely correlate to each other.

The IAAO considers the median ratio the most appropriate statistical measure for use in determining level of value for “direct” equalization; the process of adjusting the values of classes or subclasses of property in response to the determination of level of value at a point above or below a particular range. Since the median ratio is considered neutral in relationship to either assessed value or selling price, its use in adjusting the class or subclass of properties will not change the relationships between assessed value and level of value already present within the class or subclass of properties, thus rendering an adjustment neutral in its impact on the relative tax burden to an individual property. Additionally, the median ratio is less influenced by the presence of extreme ratios, commonly called outliers. One outlier in a small sample size of sales can have controlling influence over the other measures of central tendency. The median ratio limits the distortion potential of an outlier.

The weighted mean ratio is viewed by the IAAO as the most appropriate statistical measure for “indirect” equalization; to ensure proper funding distribution of aid to political subdivisions, particularly when the distribution in part is based on the assessable value in that political subdivision, Standard on Ratio Studies, International Association of Assessing Officers, (2007). The weighted mean, because it is a value weighted ratio, best reflects a comparison of the assessed and market value of property in the political subdivision. If the distribution of aid to political subdivisions must relate to the market value available for assessment in the political subdivision, the measurement of central tendency used to analyze level of value should reflect the dollars of value available to be assessed. The weighted mean ratio does that more than either of the other measures of central tendency.

If the weighted mean ratio, because of its dollar-weighting feature, is significantly different from the median ratio, it may be an indication of other problems with assessment proportionality. When this occurs, an evaluation of the county’s assessment practices and procedures is appropriate to discover remedies to the situation.

The mean ratio is used as a basis for other statistical calculations, such as the price related differential and coefficient of variation. However, the mean ratio has limited application in the analysis of level of value because it assumes a normal distribution of the data set around the mean ratio with each ratio having the same impact on the calculation regardless of the assessed value or the selling price.

for Buffalo County**

V. Analysis of the R&O Median, Wgt. Mean, and Mean Ratios Continued

	Median	Wgt. Mean	Mean
R&O Statistics	97.47	96.35	99.14

RESIDENTIAL: A review of Table 5 indicates the median coming in at 97.47% with the wgt mean just slightly lower at 96.35% and the mean being more susceptible to outliers at 99.14%. All three measures of central tendency are within the acceptable range giving credibility to the statistical level of value.

2008 Correlation Section for Buffalo County

VI. Analysis of R&O COD and PRD

In analyzing the statistical data of assessment quality, there are two measures primarily relied upon by assessment officials. The Coefficient of Dispersion, COD, is produced to measure assessment uniformity. A low COD tends to indicate good assessment uniformity as there is a smaller “spread” or dispersion of the ratios in the sales file. A COD of less than 15 suggests that there is good assessment uniformity. Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), pp. 235-237. The IAAO has issued performance standards for major property groups:

Single-family residences: a COD of 15 percent or less.

For newer and fairly homogeneous areas: a COD of 10 or less.

Income-producing property: a COD of 20 or less, or in larger urban jurisdictions, 15 or less.

Vacant land and other unimproved property, such as agricultural land: a COD of 20 or less.

Rural residential and seasonal properties: a COD of 20 or less.

Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), p. 246.

The Price Related Differential, PRD, is produced to measure assessment vertical uniformity (progressivity or regressivity). For example, assessments are considered regressive if high value properties are under-assessed relative to low value properties. A PRD of greater than 100 suggests that high value properties are relatively under-assessed. Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), pp. 239-240. A PRD of less than 100 indicates that high value properties are relatively over-assessed. As a general rule, except for small samples, a PRD should range between 98 and 103. This range is centered slightly above 100 to allow for a slightly upward measurement bias inherent in the PRD. Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), p. 247.

The analysis in this section indicates whether the COD and PRD meet the performance standards described above.

	COD	PRD
R&O Statistics	6.58	102.90
Difference	0	0

RESIDENTIAL: Both qualitative measures reflect good assessment uniformity and they meet performance standards as outlined in the IAAO standards. The COD and PRD are within the prescribed parameters for the 2008 assessment year and reflect the solid assessment practices utilized by the Buffalo County Assessor to equalize the residential properties within the county.

VII. Analysis of Change in Statistics Due to Assessor Actions

This section compares the statistical indicators from the Preliminary Statistical Reports to the same statistical indicators from the R&O Statistical Reports. The analysis that follows explains the changes in the statistical indicators in consideration of the assessment actions taken by the county assessor.

	Preliminary Statistics	R&O Statistics	Change
Number of Sales	2086	2084	-2
Median	95.63	97.47	1.84
Wgt. Mean	93.53	96.35	2.82
Mean	97.04	99.14	2.1
COD	11.07	6.58	-4.49
PRD	103.75	102.90	-0.85
Min Sales Ratio	0.00	31.47	31.47
Max Sales Ratio	639.38	542.46	-96.92

RESIDENTIAL: A review of Table VII shows 2 sales were removed between the preliminary and final statistical analyses. Both of these sales after sales verification were determined to be agricultural parcels and moved into the agricultural sales file. The changes to the measures of central tendency and the changes in the qualitative statistics all are accurate reflections of the assessment actions taken in Buffalo County.

Buffalo County 2008 Assessment Actions taken to address the following property classes/subclasses:

Commercial

Commercial review is the same as residential except that statistical reviews have not been used in the same manner. However, with the lodging tax information, an income approach is used in addition to the cost approach for motels each year. Sales review involves calls to the buyer and seller to gather additional information.

2008 Assessment Survey for Buffalo County

Commercial/Industrial Appraisal Information

1.	Data collection done by:
	Jason, chief appraiser
2.	Valuation done by:
	Jason and Joe
3.	Pickup work done by whom:
	The appraisal staff
4.	What is the date of the Replacement Cost New data (Marshall-Swift) that are used to value this property class?
	June 2006
5.	What was the last year the depreciation schedule for this property class was developed using market-derived information?
	All depreciation schedules were reviewed and updated if necessary for 2008
6.	When was the last time that the Income Approach was used to estimate or establish the market value of the properties in this class?
	The income approach is utilized for all properties where rents and income and expense data can be obtained. This year the focus was on apartments, motels and subsidized housing
7.	When was the last year that the Market or Sales Comparison Approach was used to estimate the market value of the properties in this class?
	The sales comparison approach is used for properties of the same occupancy code if enough sales are available. With commercial properties, the availability of sales for all occupancy codes does not happen. As well, many commercial property sales entail mixed occupancy codes, in which case finding comparables is difficult.
8.	Number of market areas/neighborhoods for this property class?
	There are 21 commercial and 5 industrial market areas.
9.	How are these defined?
	Historically the commercial market areas have been defined by property characteristics and geographic location, currently other influencing factors are used such as income.
10.	Is "Assessor Location" a usable valuation identity?
	No

11.	Does the assessor location “suburban” mean something other than rural commercial? (that is, does the “suburban” location have its own market?)
	Yes, it is a 1 mile radius around the City of Kearney
12.	What is the market significance of the suburban location as defined in Reg. 10-001.07B? (Suburban shall mean a parcel of real property located outside of the limits of an incorporated city or village, but within the legal jurisdiction of an incorporated city or village.)

2008 Correlation Section for Buffalo County

Commerical Real Property

I. Correlation

COMMERCIAL: The following tables offer support of the calculated median as the official level of value for commercial property in Buffalo County. The assessment actions reflect valuation changes that occurred in the county.

Discussion throughout the past year between the Buffalo County Assessor and his state liaison have revealed that even though there is an appraisal staff separate from the assessment staff; the Assessor is knowledgeable with all types of property in his county and the valuation trends, problem areas, statistical reviews and economic outlook in his county as well as in the State of Nebraska.

Progress was made this year in electronic communication with the Assessor at times able to access his email and the AVU and abstract were submitted electronically. It would be beneficial to the county to implement procedures to transfer the sales data electronically as well as increase accuracy within the state sales file. It also would be beneficial to the taxpayers in Buffalo County to have a website accessible for parcel information.

Buffalo County is a county experiencing growth throughout it's diverse community. The large city of Kearney with the many market neighborhoods poses valuation challenges as do the smaller communities in the county. The Buffalo County Assessor and his staff have done a good job being proactive to the market. There are no areas to suggest a recommendation should be made by the state as to the commercial valuations for Buffalo County and statistical evidence follows that lends its support to a level of value for commercial property at 97% of the market.

2008 Correlation Section for Buffalo County

II. Analysis of Percentage of Sales Used

This section documents the utilization of total sales compared to qualified sales in the sales file. Neb. Rev. Stat. §77-1327(2) (R. S. Supp., 2007) provides that all sales are deemed to be arm's length transactions unless determined to be otherwise under professionally accepted mass appraisal techniques. The county assessor is responsible for the qualification of the sales included in the residential sales file. The Division periodically reviews the procedures utilized by the county assessor to qualify/disqualify sales.

The Standard on Ratio Studies, International Association of Assessing Officials, (2007), indicates that low levels of sale utilization may indicate excessive trimming by the county assessor. Excessive trimming, the arbitrary exclusion or adjustment of arm's length transactions, may indicate an attempt to inappropriately exclude arm's length transactions to create the appearance of a higher level of value and quality of assessment. The sales file, in a case of excess trimming, will fail to properly represent the level of value and quality of assessment of the population of residential real property.

	Total Sales	Qualified Sales	Percent Used
2008	313	246	78.59
2007	309	240	77.67
2006	312	236	75.64
2005	315	239	75.87
2004	300	222	74
2003	306	232	75.82
2002	298	240	80.54
2001	308	244	79.22

COMMERCIAL: Table two represents evidence that the sales verification in Buffalo County is established and part of their normal procedures. The past 6 years the fluctuation in the percentage of sales used is minimal. A review of the total commercial sales in Buffalo County shows only 5 sales that were coded out for having substantially changed since the date of the sale. This would appear to be a coding error and not an actual representation that only 5 sales out of 313 have substantially changed. It does not appear that Buffalo County has excessively trimmed their sales.

2008 Correlation Section for Buffalo County

III. Analysis of the Preliminary, Trended Preliminary and R&O Median Ratio

The trended preliminary ratio is an alternative method to calculate a point estimate as an indicator of the level of value. This table compares the preliminary median ratio, trended preliminary median ratio, and R&O median ratio, presenting four years of data to reveal any trends in assessment practices. The analysis that follows compares the changes in these ratios to the assessment actions taken by the county assessor. If the county assessor's assessment practices treat all properties in the sales file and properties in the population in a similar manner, the trended preliminary ratio will correlate closely with the R&O median ratio. The following is the justification for the trended preliminary ratio:

Adjusting for Selective Reappraisal

The reliability of sales ratio statistics depends on unsold parcels being appraised in the same manner as sold parcels. Selective reappraisal of sold parcels distorts sales ratio results, possibly rendering them useless. Equally important, selective reappraisal of sold parcels ("sales chasing") is a serious violation of basic appraisal uniformity and is highly unprofessional. Oversight agencies must be vigilant to detect the practice if it occurs and take necessary corrective action.

[To monitor sales chasing] A preferred approach is to use only sales that occur after appraised values are determined. However, as long as values from the most recent appraisal year are used in ratio studies, this is likely to be impractical. A second approach is to use values from the previous assessment year, so that most (or all) sales in the study follow the date values were set. In this approach, measures of central tendency must be adjusted to reflect changes in value between the previous and current year. For example, assume that the measure of central tendency is 0.924 and, after excluding parcels with changes in use or physical characteristics, that the overall change in value between the previous and current assessment years is 6.3 percent. The adjusted measure of central tendency is $0.924 \times 1.063 = 0.982$. This approach can be effective in determining the level of appraisal, but measures of uniformity will be unreliable if there has been any meaningful reappraisal activity for the current year.

Gloudemans, Robert J., Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), p. 315.

for Buffalo County**

III. Analysis of the Preliminary, Trended Preliminary and R&O Median Ratio Continued

	Preliminary Median	% Change in Assessed Value (excl. growth)	Trended Preliminary Ratio	R&O Median
2008	96.44	5.97	102.19	97.07
2007	96.25	9.39	105.29	97.35
2006	97.31	1.29	98.56	97.32
2005	97.79	13.62	111.11	97.86
2004	98.62	10.86	109.33	98.38
2003	98	18.87	116.49	99
2002	98	0.42	98.41	99
2001	96	-1.24	94.81	98

COMMERCIAL: The trended preliminary ratio is somewhat higher than the calculated median for this class of property. While the relationship between the trended preliminary ratio and the R&O median ratio is not ideal; it is also not extremely out of line. It suggests the valuation process is applied to the sales file and population in a fairly similar manner. The county has established good cyclical physical inspection and works hard to stay on top of the strong commercial market in Buffalo County. This table suggests that the sales file contains an over-representation in the higher demand areas when compared to other areas in Buffalo County.

2008 Correlation Section for Buffalo County

IV. Analysis of Percentage Change in Total Assessed Value in the Sales File to Percentage Change in Assessed Value

This section analyzes the percentage change of the assessed values in the sales file, between the 2008 Preliminary Statistical Reports and the 2008 R&O Statistical Reports, to the percentage change in the assessed value of all real property base, by class, reported in the 2008 County Abstract of Assessment for Real Property, Form 45, excluding growth valuation, compared to the 2007 Certificate of Taxes Levied (CTL) Report. For purposes of calculating the percentage change in the sales file, only the sales in the most recent year of the study period are used. If assessment practices treat sold and unsold properties consistently, the percentage change in the sales file and assessed base will be similar. The analysis of this data assists in determining if the statistical representations calculated from the sales file are an accurate measure of the population. The following is justification for such an analysis:

Comparison of Average Value Changes

If sold and unsold properties are similarly appraised, they should experience similar changes in value over time. Accordingly, it is possible to compute the average change in value over a selected period for sold and unsold parcels and, if necessary, test to determine whether observed differences are significant. If, for example, values for vacant sold parcels in an area have increased by 45 percent since the previous reappraisal, but values for vacant unsold parcels have increased only 10 percent, sold and unsold parcels appear to have not been equally appraised. This apparent disparity between the treatment of sold and unsold properties provides an initial indication of poor assessment practices and should trigger further inquiry into the reasons for the disparity.

Gloudemans, Robert J., Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), p. 311.

**2008 Correlation Section
for Buffalo County**

IV. Analysis of Percentage Change in Total Assessed Value in the Sales File to Percentage Change in Assessed Value Continued

% Change in Total Assessed Value in the Sales		% Change in Assessed Value (excl. growth)
11.74	2008	5.97
1.68	2007	9.39
-0.57	2006	1.29
4.17	2005	13.62
0.76	2004	10.86
-10.28	2003	18.87
2.61	2002	0.42
7.52	2001	-1.24

COMMERCIAL: Table IV reveals what was discussed in Table III, the strong commercial market in Buffalo County coupled with the aggressive assessment by the Buffalo County Assessor shows a strong reaction to the market and a revaluation that occurs as soon as the market indicates. In addition to the regular cyclical review, the Buffalo County Assessor adjusts his plan to encompass any strong movement in the market to keep his assessment current with the market. A comparison of the preliminary statistics to the final statistics provides evidence of this. All three study years are within the acceptable range, but the most recent sales show the lowest median. Following the application of the 2008 assessed values, the three years of sales show increases in their medians but the greatest movement would be in the most recent year.

2008 Correlation Section for Buffalo County

V. Analysis of the R&O Median, Wgt. Mean, and Mean Ratios

There are three measures of central tendency calculated by the Division: median ratio, weighted mean ratio, and mean ratio. Since each measure of central tendency has strengths and weaknesses, the use of any statistic for equalization should be reconciled with the other two, as in an appraisal, based on the appropriateness in the use of the statistic for a defined purpose, the quantity of the information from which it was drawn, and the reliability of the data that was used in its calculation. An examination of the three measures can serve to illustrate important trends in the data if the measures do not closely correlate to each other.

The IAAO considers the median ratio the most appropriate statistical measure for use in determining level of value for “direct” equalization; the process of adjusting the values of classes or subclasses of property in response to the determination of level of value at a point above or below a particular range. Since the median ratio is considered neutral in relationship to either assessed value or selling price, its use in adjusting the class or subclass of properties will not change the relationships between assessed value and level of value already present within the class or subclass of properties, thus rendering an adjustment neutral in its impact on the relative tax burden to an individual property. Additionally, the median ratio is less influenced by the presence of extreme ratios, commonly called outliers. One outlier in a small sample size of sales can have controlling influence over the other measures of central tendency. The median ratio limits the distortion potential of an outlier.

The weighted mean ratio is viewed by the IAAO as the most appropriate statistical measure for “indirect” equalization; to ensure proper funding distribution of aid to political subdivisions, particularly when the distribution in part is based on the assessable value in that political subdivision, Standard on Ratio Studies, International Association of Assessing Officers, (2007). The weighted mean, because it is a value weighted ratio, best reflects a comparison of the assessed and market value of property in the political subdivision. If the distribution of aid to political subdivisions must relate to the market value available for assessment in the political subdivision, the measurement of central tendency used to analyze level of value should reflect the dollars of value available to be assessed. The weighted mean ratio does that more than either of the other measures of central tendency.

If the weighted mean ratio, because of its dollar-weighting feature, is significantly different from the median ratio, it may be an indication of other problems with assessment proportionality. When this occurs, an evaluation of the county’s assessment practices and procedures is appropriate to discover remedies to the situation.

The mean ratio is used as a basis for other statistical calculations, such as the price related differential and coefficient of variation. However, the mean ratio has limited application in the analysis of level of value because it assumes a normal distribution of the data set around the mean ratio with each ratio having the same impact on the calculation regardless of the assessed value or the selling price.

for Buffalo County**

V. Analysis of the R&O Median, Wgt. Mean, and Mean Ratios Continued

	Median	Wgt. Mean	Mean
R&O Statistics	97.07	93.80	96.54

COMMERCIAL: A review of Table 5 indicates the median coming in at 97.07% with the wgt mean lower at 93.80% and the mean at 96.54%. All three measures of central tendency are within the acceptable range giving credibility to the statistical level of value.

2008 Correlation Section for Buffalo County

VI. Analysis of R&O COD and PRD

In analyzing the statistical data of assessment quality, there are two measures primarily relied upon by assessment officials. The Coefficient of Dispersion, COD, is produced to measure assessment uniformity. A low COD tends to indicate good assessment uniformity as there is a smaller “spread” or dispersion of the ratios in the sales file. A COD of less than 15 suggests that there is good assessment uniformity. Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), pp. 235-237. The IAAO has issued performance standards for major property groups:

Single-family residences: a COD of 15 percent or less.

For newer and fairly homogeneous areas: a COD of 10 or less.

Income-producing property: a COD of 20 or less, or in larger urban jurisdictions, 15 or less.

Vacant land and other unimproved property, such as agricultural land: a COD of 20 or less.

Rural residential and seasonal properties: a COD of 20 or less.

Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), p. 246.

The Price Related Differential, PRD, is produced to measure assessment vertical uniformity (progressivity or regressivity). For example, assessments are considered regressive if high value properties are under-assessed relative to low value properties. A PRD of greater than 100 suggests that high value properties are relatively under-assessed. Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), pp. 239-240. A PRD of less than 100 indicates that high value properties are relatively over-assessed. As a general rule, except for small samples, a PRD should range between 98 and 103. This range is centered slightly above 100 to allow for a slightly upward measurement bias inherent in the PRD. Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), p. 247.

The analysis in this section indicates whether the COD and PRD meet the performance standards described above.

	COD	PRD
R&O Statistics	5.45	102.92
Difference	0	0

COMMERCIAL: Both qualitative measures reflect good assessment uniformity and they meet performance standards as outlined in the IAAO standards. The COD and PRD are within the prescribed parameters for the 2008 assessment year and reflect the solid assessment practices utilized by the Buffalo County Assessor to equalize the commercial properties within the county.

for Buffalo County**

VII. Analysis of Change in Statistics Due to Assessor Actions

This section compares the statistical indicators from the Preliminary Statistical Reports to the same statistical indicators from the R&O Statistical Reports. The analysis that follows explains the changes in the statistical indicators in consideration of the assessment actions taken by the county assessor.

	Preliminary Statistics	R&O Statistics	Change
Number of Sales	247	246	-1
Median	96.44	97.07	0.63
Wgt. Mean	87.74	93.80	6.06
Mean	97.36	96.54	-0.82
COD	10.42	5.45	-4.97
PRD	110.96	102.92	-8.04
Min Sales Ratio	32.63	50.17	17.54
Max Sales Ratio	528.33	150.47	-377.86

COMMERCIAL: A review of Table VII shows 1 sale was removed between the preliminary and final statistical analyses. The sale was removed following sales verification determined the property had been substantially changed. The changes to the measures of central tendency and the changes in the qualitative statistics all are accurate reflections of the assessment actions taken in Buffalo County.

Buffalo County 2008 Assessment Actions taken to address the following property classes/subclasses:

Agricultural

Buffalo County has one full-time rural field appraiser.

His duties involve review as outlined in the Three Year Plan, sales review, pick-up work and protest review. Review starts in March and continues through the first week of January for the 2008 year.

Sales were studied in each market area in Buffalo County. Changes were made in each market area as indicated by the market.

2008 Assessment Survey for Buffalo County

Agricultural Appraisal Information

1.	Data collection done by:
	Appraisal Staff
2.	Valuation done by:
	Joe and the appraisal staff
3.	Pickup work done by whom:
	Appraisal staff
4.	Does the county have a written policy or written standards to specifically define agricultural land versus rural residential acreages?
	Yes
a.	How is agricultural land defined in this county?
	By predominate use of the land
5.	When was the last date that the Income Approach was used to estimate or establish the market value of the properties in this class?
	The assessor is not aware of the last time an income approach was used to establish the market value of agricultural land.
6.	What is the date of the soil survey currently used?
	1965
7.	What date was the last countywide land use study completed?
	Town ships are included in the regular cyclical inspection annually. The usage is never completed but updated annually.
a.	By what method? (Physical inspection, FSA maps, etc.)
	Physical inspection, NRD maps and FSA maps
b.	By whom?
	The appraisal staff
c.	What proportion is complete / implemented at this time?
	100% is always complete as the land use inspection is part of the cyclical review.
8.	Number of market areas/neighborhoods in the agricultural property class:
	20 or 21

--	--

9.	How are market areas/neighborhoods defined in this property class?
	By location and property characteristics.
10.	Has the county implemented (or is in the process of implementing) special valuation for agricultural land within the county?
	Yes, in certain portions of the county

2008 Opinions of the Property Tax Administrator for Counties that have Implemented Special Value for Buffalo County

My opinions and recommendations are stated as a conclusion based on all of the factors known to me about the assessment practices and statistical analysis for this county. See, Neb. Rev. Stat. §77-5027 (R. S. Supp., 2005). While I rely primarily on the median assessment sales ratio from the Qualified Statistical Reports for each class of real property, my opinion of level of value for a class of real property may be determined from other evidence contained in the RO. Although my primary resource regarding quality of assessment are the performance standards issued by the IAAO, my opinion of quality of assessment for a class of real property may be influenced by the assessment practices of the county assessor.

Agricultural Land

It is my opinion that the level of value of the class of agricultural land in Buffalo County is 72% of actual value. It is my opinion that the quality of assessment for the class of agricultural land in Buffalo County is in compliance with generally accepted mass appraisal practices.

Special Valuation of Agricultural Land

It is my opinion that the level of value of the special valuation of the class of agricultural land in Buffalo County is 72% of actual value. It is my opinion that the quality of assessment for the special valuation of the class of agricultural land in Buffalo County is in compliance with generally accepted mass appraisal practices.

Recapture Valuation of Agricultural Land

It is my opinion that the level of value of the recapture valuation of the class of agricultural land in Buffalo County is 74% of actual value. It is my opinion that the quality of assessment for the recapture valuation of the class of agricultural land in Buffalo County is in compliance with generally accepted mass appraisal practices.

Dated this 7th day of April, 2008.

Ruth A. Sorensen
Property Tax Administrator

SPECIAL VALUE SECTION CORRELATION for Buffalo County

I. Agricultural Land Value Correlation

In Buffalo County there are 37 qualified unimproved agricultural sales that are valued as having non-influenced value. The agricultural land is at an acceptable level of value with a median of 72.22. Both of the qualitative measures, coefficient of dispersion (9.03) and price-related differential (99.66) are suggesting that the assessment of the agricultural unimproved class has been done in a uniform and proportionate manner. A review of all available statistical data and administrative reports indicates that Buffalo County has achieved an acceptable level of value and that the quality of assessment has been met

There will be no adjustment recommended to the agricultural class of land in Buffalo County.

**SPECIAL VALUE SECTION
CORRELATION for
Buffalo County**

II. Special Value Correlation

Approximately two-thirds of Buffalo County is affected by special valuation. For assessment purposes, the special value has been developed using similar uninfluenced agricultural sales and valued the same as other agricultural property in the county.

SPECIAL VALUE SECTION CORRELATION for Buffalo County

III. Recapture Value Correlation

In Buffalo County there are 77 qualified unimproved agricultural sales that have a recapture value. The recapture land is at an acceptable level of value with a median of 73.74. Both of the qualitative measures, coefficient of dispersion (5.87) and price-related differential (103.09) are suggesting that the assessment of the recapture land has been done in a uniform and proportionate manner. A review of all available statistical data and administrative reports indicates that Buffalo County has achieved an acceptable level of value and that the quality of assessment has been met

BUFFALO COUNTY

Agricultural Land Valuation

Special Valuation & Agland Valuation

All agland in Buffalo County is valued using the market approach. Buffalo County adopted country zoning for the first time in 2002 to be effective January 1, 2003. The Assessor's Office initiated special valuation after discussion with the Buffalo County Supervisors. Letters of explanation and Special Valuation Application forms (Form 456) were mailed to the owners of record for all agland in this area.

The actual value is determined utilizing sales within the market area or nearby market areas that are deemed comparable. A file is available for public inspection with the comparable sales used in the sales comparison approach that were utilized to develop the actual value. The agland tables in the county Terra Scan software reflect both 75% of market (highest and best use value) and the uninfluenced agland value which reflects 75% of the value if the land were available only for agricultural purposes.

For 2008 there are 18 different areas that recognize a difference between value for agricultural purposes and a higher market value based upon other influences. There are still three market areas that do not indicate a difference.

Buffalo County has completed seven years of market studies for the highest and best use market values. This experience and the study of comparable sales were utilized to determine the feasibility of merging market areas. This year three areas were similar in value for agricultural purposes and combined with adjacent areas. Market comparisons have been tracked for 13 years. It is the opinion of the Assessor that small differences adjacent areas and feathered across the county are better than larger areas with significant differences across a market area line.

Each 2008 market area has differences in both the actual value and the uninfluenced agland values from one area to the next. A map of all agland market areas is available to the public in the Assessor's Office with a copy provided to the Nebraska Department of Property Assessment and Taxation.

2008 Assessment Survey for Buffalo County

I. General Information

A. Staffing and Funding Information

1.	Deputy(ies) on staff
	0, waiting on confirmation by the County Board to approve Joe Barber as deputy, he has passed the test for Assessor's exam
2.	Appraiser(s) on staff
	4
3.	Other full-time employees
	6
4.	Other part-time employees
	0
5.	Number of shared employees
	0
6.	Assessor's requested budget for current fiscal year
	\$471,415
7.	Part of the budget that is dedicated to the computer system
	0
8.	Adopted budget, or granted budget if different from above
	\$471,415
9.	Amount of the total budget set aside for appraisal work
	None of it is set aside, all appraisal in-house
10.	Amount of the total budget set aside for education/workshops
	\$2,600
11.	Appraisal/Reappraisal budget, if not part of the total budget
	No Separate Levy
12.	Other miscellaneous funds

13.	Total budget
	\$471,415
a.	Was any of last year's budget not used:
	Yes, \$12,000

B. Computer, Automation Information and GIS

1.	Administrative software
	Terra Scan
2.	CAMA software
	Terra Scan
3.	Cadastral maps: Are they currently being used?
	No
4.	Who maintains the Cadastral Maps?
	No one
5.	Does the county have GIS software?
	No
6.	Who maintains the GIS software and maps?
	N/A
7.	Personal Property software:
	Terra Scan

C. Zoning Information

1.	Does the county have zoning?
	Yes
2.	If so, is the zoning countywide?
	Yes, for any parcel 20 acres or less
3.	What municipalities in the county are zoned?
	Elm Creek, Gibbon, Kearney, Miller, Pleasanton, Ravenna, Riverdale, and Shelton

4.	When was zoning implemented?
	2003

D. Contracted Services

1.	Appraisal Services
	All “in-house” appraisal
2.	Other services
	None

Certification

Certification

This is to certify that the 2008 Reports and Opinions of the Property Tax Administrator have been sent to the following:

- Five copies to the Tax Equalization and Review Commission, by hand delivery.
- One copy to the Buffalo County Assessor, by certified mail, return receipt requested, 7006 2760 0000 6387 5425.

Dated this 7th day of April, 2008.

Cyndy Thompson

Department of Revenue, Property Assessment Division
