### Preface

The requirements for the assessment of real property for the purposes of property taxation are found in Nebraska law. The Constitution of Nebraska requires that "taxes shall be levied by valuation uniformly and proportionately upon all real property and franchises as defined by the Legislature except as otherwise provided in or permitted by this Constitution." Neb. Const. art. VIII, sec. 1 (1) (1998). The uniform standard for the assessed value of real property for tax purposes is actual value, which is defined by law as "the market value of real property in the ordinary course of trade." Neb. Rev. Stat. §77-112 (R.R.S., 2003). The assessment level for all real property, except agricultural land and horticultural land, is one hundred percent of actual value. The assessment level for agricultural land and horticultural land, hereinafter referred to as agricultural land, is seventy-five percent of actual value. Neb. Rev. Stat. §77-201(1) and (2)(R.S. Supp., 2007). More importantly, for purposes of equalization, similar properties must be assessed at the same proportion of actual value when compared to each other. Achieving the constitutional requirement of proportionality ultimately ensures the balance equity in the imposition of the property tax by local units of government on each parcel of real property.

The assessment process, implemented under the authority of the county assessor, seeks to value similarly classed properties at the same proportion to actual value. This is not a precise mathematical process, but instead depends on the judgment of the county assessor, based on his or her analysis of relevant factors that affect the actual value of real property. Nebraska law provides ranges of acceptable levels of value that must be met to achieve the uniform and proportionate valuation of classes and subclasses of real property in each county. Neb. Rev. Stat. §77-5023 (R.S. Supp., 2007) requires that all classes of real property, except agricultural land, be assessed within the range of ninety-two and one hundred percent of actual value; the class of agricultural land receiving special valuation be assessed within the range sixty-nine to seventy-five percent of its special value; and, when the land is disqualified for special value the recapture value be assessed at actual value.

To ensure that the classes of real property are assessed at these required levels of actual value, the Department of Revenue Property Assessment Division, hereinafter referred to as the Division, is annually responsible for analyzing and measuring the assessment performance of each county. This responsibility includes requiring the Property Tax Administrator to prepare statistical and narrative reports for the Tax Equalization and Review Commission, hereinafter referred to as the Commission, and the county assessors. Pursuant to Neb. Rev. Stat. §77-5027 (R.S. Supp., 2005):

(2) ... the Property Tax Administrator shall prepare and deliver to the commission and to each county assessor his or her annual reports and opinions.

(3) The annual reports and opinions of the Property Tax Administrator shall contain statistical and narrative reports informing the commission of the level of value and the quality of assessment of the classes and subclasses of real property within the county and a certification of the opinion of the Property Tax

Administrator regarding the level of value and quality of assessment of the classes and subclasses of real property in the county.

(4) In addition to an opinion of level of value and quality of assessment in the county, the Property Tax Administrator may make nonbinding recommendations for consideration by the commission.

The narrative and statistical reports contained in the Reports and Opinions of the Property Tax Administrator, hereinafter referred to as the R&O, provide a thorough, concise analysis of the assessment process implemented by each county assessor to reach the levels of value and quality of assessment required by Nebraska law. The Property Tax Administrator's opinion of level of value and quality of assessment achieved by each county assessor is a conclusion based upon all the data provided by the county assessor and gathered by the Division regarding the assessment activities during the preceding year. This is done in recognition of the fact that the measurement of assessment compliance, in terms of the concepts of actual value and uniformity and proportionality mandated by Nebraska law, requires both statistical and narrative analysis.

The Division is required by Neb. Rev. Stat. §77-1327 (R. S. Supp., 2007) to develop and maintain a state-wide sales file of all arm's length transactions. From this sales file the Division prepares an assessment sales ratio study in compliance with acceptable mass appraisal standards. The assessment sales ratio study is the primary mass appraisal performance evaluation tool. From the sales file, the Division prepares statistical analysis from a non-randomly selected set of observations, known as sales, from which inferences about the population, known as a class or subclass of real property, may be drawn. The statistical reports contained in the R&O are developed in compliance with standards developed by the International Association of Assessing Officers, hereinafter referred to as the IAAO.

However, just as the valuation of property is sometimes more art than science, a narrative analysis of assessment practices in each county is necessary to give proper context to the statistical inferences from the assessment sales ratio study. There may be instances when the analysis of assessment practices outweighs or limits the reliability of the statistical inferences of central tendency or quality measures. This may require an opinion of the level of value that is not identical to the result of the statistical calculation. The Property Tax Administrator's goal is to provide statistical and narrative analysis of the assessment level and practices to the Commission, providing the Commission with the most complete picture possible of the true level of value and quality of assessment in each county.

The Property Tax Administrator's opinions of level of value and quality of assessment are stated as a single numeric representation for level of value and a simple judgment regarding the quality of assessment practices. Based on the information collected in developing this report the Property Tax Administrator may feel further recommendations must be stated for a county to assist the Commission in determining the level of value and quality of assessment within a county. These opinions are made only after considering all narrative and statistical analysis provided by the county assessor and gathered by the Division. An evaluation of these opinions must only be made after considering all other information provided in the R&O. Finally, after reviewing all of the information available to the Property Tax Administrator regarding the level and quality of assessment for classes and subclasses of real property in each county, the Property Tax Administrator, pursuant to Neb. Rev. Stat. §77-5027(4) (R.S. Supp., 2005), may make recommendations for adjustments to value for classes and subclasses of property. All of the factors relating to the Property Tax Administrator's determination of level of value and quality of assessment shall be taken into account in the making of such recommendations. Such recommendations are not binding on the Commission.

Opinions

### 2008 Opinions of the Property Tax Administrator for Harlan County

My opinions and recommendations are stated as a conclusion based on all of the factors known to me about the assessment practices and statistical analysis for this county. See, Neb. Rev. Stat. §77-5027 (R. S. Supp., 2005). While I rely primarily on the median assessment sales ratio from the Qualified Statistical Reports for each class of real property, my opinion of level of value for a class of real property may be determined from other evidence contained in the RO. Although my primary resource regarding quality of assessment are the performance standards issued by the IAAO, my opinion of quality of assessment for a class of real property may be influenced by the assessment practices of the county assessor.

### **Residential Real Property**

It is my opinion that the level of value of the class of residential real property in Harlan County is 97% of actual value. It is my opinion that the quality of assessment for the class of residential real property in Harlan County is in compliance with generally accepted mass appraisal practices.

### **Commercial Real Property**

It is my opinion that the level of value of the class of commercial real property in Harlan County is 100% of actual value. It is my opinion that the quality of assessment for the class of commercial real property in Harlan County is in compliance with generally accepted mass appraisal practices.

### **Agricultural Land**

It is my opinion that the level of value of the class of agricultural land in Harlan County is 73% of actual value. It is my opinion that the quality of assessment for the class of agricultural land in Harlan County is in compliance with generally accepted mass appraisal practices.

Dated this 7th day of April, 2008.

Kuth a. Sorense

# Harlan County 2008 Assessment Actions taken to address the following property classes/subclasses:

### Residential

Within the residential property class for assessment year 2008 a five percent increase was applied to the acreages, and a four percent increase for the recreational properties.

Within Republican City the homes received a two percent increase and all mobile homes with land and lake influence received an eleven percent increase.

### 2008 Assessment Survey for Harlan County

### **Residential Appraisal Information**

(Includes Urban, Suburban and Rural Residential)

1.	Data collection done by:
	Appraisal staff and assessment staff as needed.
2.	Valuation done by:
	Appraisal staff and assessment staff.
3.	Pickup work done by whom:
	Appraisal staff and assessment staff as needed.
4.	What is the date of the Replacement Cost New data (Marshall-Swift) that are used to value this property class?
	June of 2002
5.	What was the last year the depreciation schedule for this property class was developed using market-derived information?
	2006
6.	What was the last year that the Market or Sales Comparison Approach was used to estimate the market value of the properties in this class?
	Currently multiple regression is not used in Harlan County; however sales derived from the market are utilized to create depreciation schedules.
7	Number of market areas/neighborhoods for this preparty class:
7.	Eleven; which basically follow the "Assessor Location" on the Statistical Report.
8.	How are these defined?
	They are defined by market driven information and locations with similar characteristics.
9.	Is "Assessor Location" a usable valuation identity?
	It can be, but there may be instances when economic conditions would prove it not to be. For example; older homes may be experiencing a decline in value and depreciation tables would have to be re-calibrated to account for this market change in only the older homes. If a blanket adjustment is made to an assessor location the median may be acceptable but the quality of assessment would not be. Therefore uniform and proportionate treatment becomes an issue for all.

10.	Does the assessor location "suburban" mean something other than rural
	<b>residential?</b> (that is, does the "suburban" location have its own market?)
	No

11.	What is the market significance of the suburban location as defined in Reg. 10- 001.07B? (Suburban shall mean a parcel of real property located outside of the limits of an incorporated city or village, but within the legal jurisdiction of an incorporated city or village.)
	The assessor location "suburban" is not used.
12.	Are the county's ag residential and rural residential improvements classified and valued in the same manner?
	Yes

### **Residential Permit Numbers:**

Permits	<b>Information Statements</b>	Other	Total

**Residential Correlation** 

### **Residential Real Property**

### I. Correlation

RESIDENTIAL: The qualified residential statistics support the actions taken by Harlan County. All three measures of central tendency are within the prescribed parameters for an acceptable level of value. The qualitative measures are indicative of uniform and proportionate assessment of the residential property class. The adopted three-year plan, preliminary statistics, the 2008 Reports and Opinions statistics, and the 2008 Assessment Survey all support that Harlan County has achieved an acceptable level of value.

There will be no recommended adjustments to the residential class of property.

### II. Analysis of Percentage of Sales Used

This section documents the utilization of total sales compared to qualified sales in the sales file. Neb. Rev. Stat. §77-1327(2) (R. S. Supp., 2007) provides that all sales are deemed to be arm's length transactions unless determined to be otherwise under professionally accepted mass appraisal techniques. The county assessor is responsible for the qualification of the sales included in the residential sales file. The Division periodically reviews the procedures utilized by the county assessor to qualify/disqualify sales.

The Standard on Ratio Studies, International Association of Assessing Officials, (2007), indicates that low levels of sale utilization may indicate excessive trimming by the county assessor. Excessive trimming, the arbitrary exclusion or adjustment of arm's length transactions, may indicate an attempt to inappropriately exclude arm's length transactions to create the appearance of a higher level of value and quality of assessment. The sales file, in a case of excess trimming, will fail to properly represent the level of value and quality of assessment of the population of residential real property.

	<b>Total Sales</b>	Qualified Sales	Percent Used
2008	226	145	64.16
2007	212	127	59.91
2006	209	123	58.85
2005	201	148	73.63
2004	210	160	76.19
2003	218	167	76.61
2002	264	206	78.03
2001	291	235	80.76

RESIDENTIAL: Historically Harlan County has used a high proportion of the total sales in the measurement of the residential properties; the percent of use for 2008 has increased from 2007. It is believed that Harlan County has used a reasonable number of qualified sales in the measurement of the residential class of property.

### III. Analysis of the Preliminary, Trended Preliminary and R&O Median Ratio

The trended preliminary ratio is an alternative method to calculate a point estimate as an indicator of the level of value. This table compares the preliminary median ratio, trended preliminary median ratio, and R&O median ratio, presenting four years of data to reveal any trends in assessment practices. The analysis that follows compares the changes in these ratios to the assessment actions taken by the county assessor. If the county assessor's assessment practices treat all properties in the sales file and properties in the population in a similar manner, the trended preliminary ratio will correlate closely with the R&O median ratio. The following is the justification for the trended preliminary ratio:

### Adjusting for Selective Reappraisal

The reliability of sales ratio statistics depends on unsold parcels being appraised in the same manner as sold parcels. Selective reappraisal of sold parcels distorts sales ratio results, possibly rendering them useless. Equally important, selective reappraisal of sold parcels ("sales chasing") is a serious violation of basic appraisal uniformity and is highly unprofessional. Oversight agencies must be vigilant to detect the practice if it occurs and take necessary corrective action.

[To monitor sales chasing] A preferred approach is to use only sales that occur after appraised values are determined. However, as long as values from the most recent appraisal year are used in ratio studies, this is likely to be impractical. A second approach is to use values from the previous assessment year, so that most (or all) sales in the study follow the date values were set. In this approach, measures of central tendency must be adjusted to reflect changes in value between the previous and current year. For example, assume that the measure of central tendency is 0.924 and, after excluding parcels with changes in use or physical characteristics, that the overall change in value between the previous and current assessment years is 6.3 percent. The adjusted measure of central tendency is  $0.924 \times 1.063 = 0.982$ . This approach can be effective in determining the level of appraisal, but measures of uniformity will be unreliable if there has been any meaningful reappraisal activity for the current year.

Gloudemans, Robert J., Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), p. 315.

	Preliminary Median	% Change in Assessed Value (excl. growth)	Trended Preliminary Ratio	R&O Median
2008	96.14	2.26	98.31	97.05
2007	96.31	4.35	100.5	97.73
2006	94.83	2.36	97.06	96.60
2005	95.43	1	96.38	96.49
2004	95.43	3.48	98.75	96.82
2003	93	3.5	96.26	98
2002	95	1.64	96.56	95
2001	90	4.03	93.63	97

### III. Analysis of the Preliminary, Trended Preliminary and R&O Median Ratio Continued

RESIDENTIAL: There is a 1.26 point difference between the Trended Preliminary Ratio and the R&O Ratio giving indication the two measures are similar and tend to support each other and an acceptable level of value. The action within the assessed base is consistent with the reported assessment action.

## IV. Analysis of Percentage Change in Total Assessed Value in the Sales File to Percentage Change in Assessed Value

This section analyzes the percentage change of the assessed values in the sales file, between the 2008 Preliminary Statistical Reports and the 2008 R&O Statistical Reports, to the percentage change in the assessed value of all real property base, by class, reported in the 2008 County Abstract of Assessment for Real Property, Form 45, excluding growth valuation, compared to the 2007 Certificate of Taxes Levied (CTL) Report. For purposes of calculating the percentage change in the sales file, only the sales in the most recent year of the study period are used. If assessment practices treat sold and unsold properties consistently, the percentage change in the sales file and assessed base will be similar. The analysis of this data assists in determining if the statistical representations calculated from the sales file are an accurate measure of the population. The following is justification for such an analysis:

### Comparison of Average Value Changes

If sold and unsold properties are similarly appraised, they should experience similar changes in value over time. Accordingly, it is possible to compute the average change in value over a selected period for sold and unsold parcels and, if necessary, test to determine whether observed differences are significant. If, for example, values for vacant sold parcels in an area have increased by 45 percent since the previous reappraisal, but values for vacant unsold parcels have increased only 10 percent, sold and unsold parcels appear to have not been equally appraised. This apparent disparity between the treatment of sold and unsold properties provides an initial indication of poor assessment practices and should trigger further inquiry into the reasons for the disparity.

Gloudemans, Robert J., Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), p. 311.

% Change in Total Assessed Value in the Sal	es	% Change in Assessed Value (excl. growth)
5.63	2008	2.26
5.23	2007	4.35
6.52	2006	2.36
1.77	2005	1
4.23	2004	3.48
7.95	2003	3.5
5.56	2002	1.64
1.03	2001	4.03

IV. Analysis of Percentage Change in Total Assessed Value in the Sales File to Percentage Change in Assessed Value Continued

RESIDENTIAL: The table is indicating a 3.37 point difference between the percent change in the sales file compared to the percent of change in the base. The sales file is not only reflecting the assessment actions but also the sales verification and review process in place in Harlan County. The appraisal staff is very thorough in reviewing the sales for the accuracy of data against the property record cards and making all necessary corrections. There are possibly some sales in the sales file that should have been considered substantially improved and removed.

### V. Analysis of the R&O Median, Wgt. Mean, and Mean Ratios

There are three measures of central tendency calculated by the Division: median ratio, weighted mean ratio, and mean ratio. Since each measure of central tendency has strengths and weaknesses, the use of any statistic for equalization should be reconciled with the other two, as in an appraisal, based on the appropriateness in the use of the statistic for a defined purpose, the quantity of the information from which it was drawn, and the reliability of the data that was used in its calculation. An examination of the three measures can serve to illustrate important trends in the data if the measures do not closely correlate to each other.

The IAAO considers the median ratio the most appropriate statistical measure for use in determining level of value for "direct" equalization; the process of adjusting the values of classes or subclasses of property in response to the determination of level of value at a point above or below a particular range. Since the median ratio is considered neutral in relationship to either assessed value or selling price, its use in adjusting the class or subclass of properties will not change the relationships between assessed value and level of value already present within the class or subclass of properties, thus rendering an adjustment neutral in its impact on the relative tax burden to an individual property. Additionally, the median ratio is less influenced by the presence of extreme ratios, commonly called outliers. One outlier in a small sample size of sales can have controlling influence over the other measures of central tendency. The median ratio limits the distortion potential of an outlier.

The weighted mean ratio is viewed by the IAAO as the most appropriate statistical measure for "indirect" equalization; to ensure proper funding distribution of aid to political subdivisions, particularly when the distribution in part is based on the assessable value in that political subdivision, Standard on Ratio Studies, International Association of Assessing Officers, (2007). The weighted mean, because it is a value weighted ratio, best reflects a comparison of the assessed and market value of property in the political subdivision. If the distribution of aid to political subdivision, the measurement of central tendency used to analyze level of value should reflect the dollars of value available to be assessed. The weighted mean ratio does that more than either of the other measures of central tendency.

If the weighted mean ratio, because of its dollar-weighting feature, is significantly different from the median ratio, it may be an indication of other problems with assessment proportionality. When this occurs, an evaluation of the county's assessment practices and procedures is appropriate to discover remedies to the situation.

The mean ratio is used as a basis for other statistical calculations, such as the price related differential and coefficient of variation. However, the mean ratio has limited application in the analysis of level of value because it assumes a normal distribution of the data set around the mean ratio with each ratio having the same impact on the calculation regardless of the assessed value or the selling price.

### V. Analysis of the R&O Median, Wgt. Mean, and Mean Ratios Continued

	Median	Wgt. Mean	Mean
<b>R&amp;O</b> Statistics	97.05	96.11	99.70

RESIDENTIAL: All three measures of central tendency are within the required parameters and are supportive of one another. For direct equalization purposes the median measure of central tendency will be used to describe the level of value for the residential class of property.

### VI. Analysis of R&O COD and PRD

In analyzing the statistical data of assessment quality, there are two measures primarily relied upon by assessment officials. The Coefficient of Dispersion, COD, is produced to measure assessment uniformity. A low COD tends to indicate good assessment uniformity as there is a smaller "spread" or dispersion of the ratios in the sales file. A COD of less than 15 suggests that there is good assessment uniformity. Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), pp. 235-237. The IAAO has issued performance standards for major property groups:

Single-family residences: a COD of 15 percent or less.

For newer and fairly homogeneous areas: a COD of 10 or less. Income-producing property: a COD of 20 or less, or in larger urban jurisdictions, 15 or less. Vacant land and other unimproved property, such as agricultural land: a COD of 20 or less. Rural residential and seasonal properties: a COD of 20 or less.

Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), p. 246.

The Price Related Differential, PRD, is produced to measure assessment vertical uniformity (progressivity or regressivity). For example, assessments are considered regressive if high value properties are under-assessed relative to low value properties. A PRD of greater than 100 suggests that high value properties are relatively under-assessed. Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), pp. 239-240. A PRD of less than 100 indicates that high value properties are relatively over-assessed. As a general rule, except for small samples, a PRD should range between 98 and 103. This range is centered slightly above 100 to allow for a slightly upward measurement bias inherent in the PRD. Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), p. 247.

The analysis in this section indicates whether the COD and PRD meet the performance standards described above.

	COD	PRD
<b>R&amp;O Statistics</b>	13.51	103.73
Difference	0	0.73

RESIDENTIAL: Of the measures of dispersion only the price related differential is slightly above the acceptable range by less than one point. Knowing the assessment practices of Harlan County this is not a concern and it is believed that the residential properties are being treated in a uniform and proportionate manner.

### VII. Analysis of Change in Statistics Due to Assessor Actions

This section compares the statistical indicators from the Preliminary Statistical Reports to the same statistical indicators from the R&O Statistical Reports. The analysis that follows explains the changes in the statistical indicators in consideration of the assessment actions taken by the county assessor.

	<b>Preliminary Statistics</b>	<b>R&amp;O</b> Statistics	Change
Number of Sales	145	145	0
Median	96.14	97.05	0.91
Wgt. Mean	92.19	96.11	3.92
Mean	97.53	99.70	2.17
COD	15.98	13.51	-2.47
PRD	105.80	103.73	-2.07
Min Sales Ratio	42.00	42.00	0
Max Sales Ratio	175.83	179.33	3.5

RESIDENTIAL: The change in the Preliminary Statistics to the R&O Statistics is a reflection of the assessment actions for 2008 in that a five percent increase was applied to the acreages, and a four percent increase for the recreational properties. Homes within Republican City received a two percent increase and all mobile homes with land and lake influence received an eleven percent increase.

# Harlan County 2008 Assessment Actions taken to address the following property classes/subclasses:

#### Commercial

Other than routine maintenance there were no major valuation changes within the commercial class/subclasses for assessment year 2008.

# 2008 Assessment Survey for Harlan County

### **Commercial/Industrial Appraisal Information**

1.	Data collection done by:
	Appraisal staff and assessment staff as needed.
2.	Valuation done by:
	Appraisal staff and assessment staff.
3.	Pickup work done by whom:
	Appraisal staff and assessment staff as needed.
4.	What is the date of the Replacement Cost New data (Marshall-Swift) that are used to value this property class?
	June of 2002.
5.	What was the last year the depreciation schedule for this property class was developed using market-derived information?
	2005
6.	When was the last time that the Income Approach was used to estimate or establish the market value of the properties in this class?
	2005; it is used when income/expense and rent information is available and applicable.
7.	When was the last year that the Market or Sales Comparison Approach was used to estimate the market value of the properties in this class?
	Harlan County has few commercial properties, this approach may be used to assist in valuing some properties if market data can be found, but generally it is not applicable.
8.	Number of market areas/neighborhoods for this property class?
	Eleven; which follow the "Assessor Location" on the Statistical Report.
9.	How are these defined?
	These are defined by location and market driven information.
10.	Is "Assessor Location" a usable valuation identity?
	No – there are too few sales.
11.	Does the assessor location "suburban" mean something other than rural
	commercial? (that is, does the "suburban" location have its own market?)
	No

12.	What is the market significance of the suburban location as defined in Reg. 10-
	<b>001.07B?</b> (Suburban shall mean a parcel of real property located outside of the
	limits of an incorporated city or village, but within the legal jurisdiction of an
	incorporated city or village.)
	The assessor location "suburban" is not used.

#### **Commercial Permit Numbers:**

**Commercial Correlations** 

#### **Commerical Real Property**

#### I. Correlation

COMMERCIAL: Of the three measures of central tendency only the weighted mean is below the acceptable range. There does not appear to be a particular outlier(s), low dollar sales, or high dollar sales affecting the sample. Considering the small number of sales, the dispersion among assessor locations, and the diversity of the commercial properties this would not be an uncommon occurrence.

For direct equalization purposes the median measure of central tendency will be used to describe the level of value for the commercial class of property. There will be no recommended adjustment for this class.

#### II. Analysis of Percentage of Sales Used

This section documents the utilization of total sales compared to qualified sales in the sales file. Neb. Rev. Stat. §77-1327(2) (R. S. Supp., 2007) provides that all sales are deemed to be arm's length transactions unless determined to be otherwise under professionally accepted mass appraisal techniques. The county assessor is responsible for the qualification of the sales included in the residential sales file. The Division periodically reviews the procedures utilized by the county assessor to qualify/disqualify sales.

The Standard on Ratio Studies, International Association of Assessing Officials, (2007), indicates that low levels of sale utilization may indicate excessive trimming by the county assessor. Excessive trimming, the arbitrary exclusion or adjustment of arm's length transactions, may indicate an attempt to inappropriately exclude arm's length transactions to create the appearance of a higher level of value and quality of assessment. The sales file, in a case of excess trimming, will fail to properly represent the level of value and quality of assessment of the population of residential real property.

	<b>Total Sales</b>	Qualified Sales	Percent Used
2008	52	27	51.92
2007	48	28	58.33
2006	42	22	52.38
2005	33	23	69.7
2004	37	30	81.08
2003	47	39	82.98
2002	51	41	80.39
2001	55	40	72.73

COMMERCIAL: Of the 52 commercial sales the review process has determined 27 of them to be qualified sales. Of the 25 not used, 9 were substantially changed, 4 were family sales, and the remainder was a mixture of correction to title, partial interests, undetermined amount of personal property involved in the sale, exempt entity, and a satisfaction of contract. Harlan County has attempted to use as many sales as possible in the measurement of the commercial class of property.

#### III. Analysis of the Preliminary, Trended Preliminary and R&O Median Ratio

The trended preliminary ratio is an alternative method to calculate a point estimate as an indicator of the level of value. This table compares the preliminary median ratio, trended preliminary median ratio, and R&O median ratio, presenting four years of data to reveal any trends in assessment practices. The analysis that follows compares the changes in these ratios to the assessment actions taken by the county assessor. If the county assessor's assessment practices treat all properties in the sales file and properties in the population in a similar manner, the trended preliminary ratio will correlate closely with the R&O median ratio. The following is the justification for the trended preliminary ratio:

#### Adjusting for Selective Reappraisal

The reliability of sales ratio statistics depends on unsold parcels being appraised in the same manner as sold parcels. Selective reappraisal of sold parcels distorts sales ratio results, possibly rendering them useless. Equally important, selective reappraisal of sold parcels ("sales chasing") is a serious violation of basic appraisal uniformity and is highly unprofessional. Oversight agencies must be vigilant to detect the practice if it occurs and take necessary corrective action.

[To monitor sales chasing] A preferred approach is to use only sales that occur after appraised values are determined. However, as long as values from the most recent appraisal year are used in ratio studies, this is likely to be impractical. A second approach is to use values from the previous assessment year, so that most (or all) sales in the study follow the date values were set. In this approach, measures of central tendency must be adjusted to reflect changes in value between the previous and current year. For example, assume that the measure of central tendency is 0.924 and, after excluding parcels with changes in use or physical characteristics, that the overall change in value between the previous and current assessment years is 6.3 percent. The adjusted measure of central tendency is  $0.924 \times 1.063 = 0.982$ . This approach can be effective in determining the level of appraisal, but measures of uniformity will be unreliable if there has been any meaningful reappraisal activity for the current year.

Gloudemans, Robert J., Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), p. 315.

	Preliminary Median	% Change in Assessed Value (excl. growth)	Trended Preliminary Ratio	R&O Median
2008	100.31	0.2	100.51	100.31
2007	99.72	0.68	100.4	99.75
2006	99.66	-0.73	98.93	<b>99.7</b> 1
2005	97.09	4.31	101.27	98.56
2004	97.18	-3.33	93.95	96.78
2003	95	6.2	100.89	97
2002	95	8.21	102.8	95
2001	94	0.34	94.32	97

#### III. Analysis of the Preliminary, Trended Preliminary and R&O Median Ratio Continued

COMMERCIAL: The Trended Preliminary Ratio and the R&O Ratio are essentially identical and support a level of value within the acceptable range. The action within the assessed base is consistent with the reported assessment action.

# IV. Analysis of Percentage Change in Total Assessed Value in the Sales File to Percentage Change in Assessed Value

This section analyzes the percentage change of the assessed values in the sales file, between the 2008 Preliminary Statistical Reports and the 2008 R&O Statistical Reports, to the percentage change in the assessed value of all real property base, by class, reported in the 2008 County Abstract of Assessment for Real Property, Form 45, excluding growth valuation, compared to the 2007 Certificate of Taxes Levied (CTL) Report. For purposes of calculating the percentage change in the sales file, only the sales in the most recent year of the study period are used. If assessment practices treat sold and unsold properties consistently, the percentage change in the sales file and assessed base will be similar. The analysis of this data assists in determining if the statistical representations calculated from the sales file are an accurate measure of the population. The following is justification for such an analysis:

#### Comparison of Average Value Changes

If sold and unsold properties are similarly appraised, they should experience similar changes in value over time. Accordingly, it is possible to compute the average change in value over a selected period for sold and unsold parcels and, if necessary, test to determine whether observed differences are significant. If, for example, values for vacant sold parcels in an area have increased by 45 percent since the previous reappraisal, but values for vacant unsold parcels have increased only 10 percent, sold and unsold parcels appear to have not been equally appraised. This apparent disparity between the treatment of sold and unsold properties provides an initial indication of poor assessment practices and should trigger further inquiry into the reasons for the disparity.

Gloudemans, Robert J., Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), p. 311.

IV.	Analysis of Percentage Change in Total Assessed Value in the Sales File to Percentage
Cha	ge in Assessed Value Continued

% Change in Total Assessed Value in the Sales	8	% Change in Assessed Value (excl. growth)
0.51	2008	0.2
5.23	2007	0.68
0.36	2006	-0.73
0.68	2005	4.31
-1.37	2004	-3.33
0.98	2003	6.2
-2.88	2002	8.21
-1.96	2001	0.34

COMMERCIAL: There is only a minimal difference between the percent of change in the sales file compared to the percent of change in the base. For assessment year 2008 there was only routine maintenance within the commercial class of property. One sale within the sales file experienced a slight increase in the improvement value.

#### V. Analysis of the R&O Median, Wgt. Mean, and Mean Ratios

There are three measures of central tendency calculated by the Division: median ratio, weighted mean ratio, and mean ratio. Since each measure of central tendency has strengths and weaknesses, the use of any statistic for equalization should be reconciled with the other two, as in an appraisal, based on the appropriateness in the use of the statistic for a defined purpose, the quantity of the information from which it was drawn, and the reliability of the data that was used in its calculation. An examination of the three measures can serve to illustrate important trends in the data if the measures do not closely correlate to each other.

The IAAO considers the median ratio the most appropriate statistical measure for use in determining level of value for "direct" equalization; the process of adjusting the values of classes or subclasses of property in response to the determination of level of value at a point above or below a particular range. Since the median ratio is considered neutral in relationship to either assessed value or selling price, its use in adjusting the class or subclass of properties will not change the relationships between assessed value and level of value already present within the class or subclass of properties, thus rendering an adjustment neutral in its impact on the relative tax burden to an individual property. Additionally, the median ratio is less influenced by the presence of extreme ratios, commonly called outliers. One outlier in a small sample size of sales can have controlling influence over the other measures of central tendency. The median ratio limits the distortion potential of an outlier.

The weighted mean ratio is viewed by the IAAO as the most appropriate statistical measure for "indirect" equalization; to ensure proper funding distribution of aid to political subdivisions, particularly when the distribution in part is based on the assessable value in that political subdivision, Standard on Ratio Studies, International Association of Assessing Officers, (2007). The weighted mean, because it is a value weighted ratio, best reflects a comparison of the assessed and market value of property in the political subdivision. If the distribution of aid to political subdivision, the measurement of central tendency used to analyze level of value should reflect the dollars of value available to be assessed. The weighted mean ratio does that more than either of the other measures of central tendency.

If the weighted mean ratio, because of its dollar-weighting feature, is significantly different from the median ratio, it may be an indication of other problems with assessment proportionality. When this occurs, an evaluation of the county's assessment practices and procedures is appropriate to discover remedies to the situation.

The mean ratio is used as a basis for other statistical calculations, such as the price related differential and coefficient of variation. However, the mean ratio has limited application in the analysis of level of value because it assumes a normal distribution of the data set around the mean ratio with each ratio having the same impact on the calculation regardless of the assessed value or the selling price.

#### V. Analysis of the R&O Median, Wgt. Mean, and Mean Ratios Continued

	Median	Wgt. Mean	Mean
<b>R&amp;O</b> Statistics	100.31	84.05	98.75

COMMERCIAL: Of the three measures of central tendency only the weighted mean is below the acceptable range. There does not appear to be a particular outlier(s), low dollar sales, or high dollar sales affecting the sample. Considering the small number of sales, the dispersion among assessor locations, and the diversity of the commercial properties this would not be an uncommon occurrence. For direct equalization purposes the median measure of central tendency will be used to describe the level of value for the commercial class of property.

#### VI. Analysis of R&O COD and PRD

In analyzing the statistical data of assessment quality, there are two measures primarily relied upon by assessment officials. The Coefficient of Dispersion, COD, is produced to measure assessment uniformity. A low COD tends to indicate good assessment uniformity as there is a smaller "spread" or dispersion of the ratios in the sales file. A COD of less than 15 suggests that there is good assessment uniformity. Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), pp. 235-237. The IAAO has issued performance standards for major property groups:

Single-family residences: a COD of 15 percent or less.

For newer and fairly homogeneous areas: a COD of 10 or less. Income-producing property: a COD of 20 or less, or in larger urban jurisdictions, 15 or less. Vacant land and other unimproved property, such as agricultural land: a COD of 20 or less. Rural residential and seasonal properties: a COD of 20 or less.

Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), p. 246.

The Price Related Differential, PRD, is produced to measure assessment vertical uniformity (progressivity or regressivity). For example, assessments are considered regressive if high value properties are under-assessed relative to low value properties. A PRD of greater than 100 suggests that high value properties are relatively under-assessed. Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), pp. 239-240. A PRD of less than 100 indicates that high value properties are relatively over-assessed. As a general rule, except for small samples, a PRD should range between 98 and 103. This range is centered slightly above 100 to allow for a slightly upward measurement bias inherent in the PRD. Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), p. 247.

The analysis in this section indicates whether the COD and PRD meet the performance standards described above.

	COD	PRD
<b>R&amp;O Statistics</b>	18.99	117.49
Difference	0	14.49

COMMERCIAL: Of the measures of dispersion only the coefficient of dispersion has met the acceptable standard. The price-related differential is indicating regressivity. But again there does not appear to be a particular outlier(s), low dollar sales, or high dollar sales affecting the sample. It is believed the small number of sales, the dispersion among assessor locations, and the diversity of the commercial properties are causing this affect. Knowing the assessment practices of Harlan County it is believed that the commercial properties are being treated in a uniform and proportionate manner.

#### VII. Analysis of Change in Statistics Due to Assessor Actions

This section compares the statistical indicators from the Preliminary Statistical Reports to the same statistical indicators from the R&O Statistical Reports. The analysis that follows explains the changes in the statistical indicators in consideration of the assessment actions taken by the county assessor.

	<b>Preliminary Statistics</b>	<b>R&amp;O</b> Statistics	Change
Number of Sales	27	27	0
Median	100.31	100.31	0
Wgt. Mean	83.89	84.05	0.16
Mean	98.12	<b>98.75</b>	0.63
COD	19.61	18.99	-0.62
PRD	116.96	117.49	0.53
Min Sales Ratio	45.42	45.42	0
Max Sales Ratio	209.80	209.80	0

COMMERCIAL: The slight change from the Preliminary Statistics to the R&O statistics is due to a change in the lot value of sale book 61 page 127 sale date 01/22/07 which had previously carried a residential value before being moved into the commercial file. Otherwise there were no major valuation changes within the commercial class/subclasses for assessment year 2008.

# Harlan County 2008 Assessment Actions taken to address the following property classes/subclasses:

#### Agricultural

An analysis of each market area was done, as part of this study the purer irrigated, dry, and grass sales will be given the most weight. However, in Harlan County pure irrigated, dry, and grass sales are rare, most sales are a mixture of two or more of the land classifications.

As a result of the changing market conditions the values change by market area as follows:

Market Area 1 – a nine percent increase Market Area 2 – a two percent increase Market Area 3 – a one percent increase

Overall the agricultural land value increased by three percent.

The county has been working with the NRD maps to make sure the certified irrigated acres are correct on the property record cards.

New soil conversions were sent to all assessors in February of 2008, Harlan County has purchased a program called AgriData that allows them access to maps of the county and the ability to identify irrigated, dry, or grass parcels, and provides acre counts by numeric soil type. This computerized data source is a tremendous asset to the county and will be utilized until such time a GIS system can by implemented.

# 2008 Assessment Survey for Harlan County

### Agricultural Appraisal Information

1.	Data collection done by:
	Appraisal staff and assessment staff as needed.
2.	Valuation done by:
	Appraisal staff and assessment staff.
3.	Pickup work done by whom:
	Appraisal staff and assessment staff as needed.
4.	Does the county have a written policy or written standards to specifically
	define agricultural land versus rural residential acreages?
	Directive 07-01 dated March 9, 2007.
a.	How is agricultural land defined in this county?
	By primary use.
5.	When was the last date that the Income Approach was used to estimate or establish the market value of the properties in this class?
	Non-applicable.
6.	What is the date of the soil survey currently used?
	1970
7.	What date was the last countywide land use study completed?
	The office procedure is to handle this on a continual basis every year.
a.	By what method? (Physical inspection, FSA maps, etc.)
	Primarily NRD maps, if available, and the new AgriData system and on-site inspections.
<u>b.</u>	By whom?
	Office staff.
<u> </u>	What proportion is complete / implemented at this time?
	Again, this is an ongoing process in Harlan County the occupational tax imposed by
	the Republican River Basin NRD board has caused even more intense work to
	check the irrigated acres that are the basis for the tax.
8.	Number of market areas/neighborhoods in the agricultural property class:

9.	How are market areas/neighborhoods defined in this property class?
	Geographical boundary lines and market driven information.
10.	Has the county implemented (or is in the process of implementing) special
	valuation for agricultural land within the county?
	No

#### Agricultural Permit Numbers:

**Agricultural Correlation**
#### **Agricultural Land**

#### I. Correlation

AGRICULTURAL UNIMPROVED: The agricultural unimproved statistics support the assessment actions taken by Harlan County. The R&O Median will be used in determining the level of value and is supported by the trended preliminary ratio. The qualitative measures are indicating uniform and proportionate treatment within the agricultural unimproved class of property. The adopted three-year plan, preliminary statistics, the 2008 Reports & Opinions statistics, and the 2008 Assessment Survey all support that Harlan County has achieved an acceptable level of value.

There will be no recommended adjustments to the agricultural unimproved class of property.

#### II. Analysis of Percentage of Sales Used

This section documents the utilization of total sales compared to qualified sales in the sales file. Neb. Rev. Stat. §77-1327(2) (R. S. Supp., 2007) provides that all sales are deemed to be arm's length transactions unless determined to be otherwise under professionally accepted mass appraisal techniques. The county assessor is responsible for the qualification of the sales included in the residential sales file. The Division periodically reviews the procedures utilized by the county assessor to qualify/disqualify sales.

The Standard on Ratio Studies, International Association of Assessing Officials, (2007), indicates that low levels of sale utilization may indicate excessive trimming by the county assessor. Excessive trimming, the arbitrary exclusion or adjustment of arm's length transactions, may indicate an attempt to inappropriately exclude arm's length transactions to create the appearance of a higher level of value and quality of assessment. The sales file, in a case of excess trimming, will fail to properly represent the level of value and quality of assessment of the population of residential real property.

	<b>Total Sales</b>	Qualified Sales	Percent Used
2008	126	46	36.51
2007	117	38	32.48
2006	119	40	33.61
2005	100	54	54
2004	100	54	54
2003	91	51	56.04
2002	<b>98</b>	61	62.24
2001	98	61	62.24

AGRICULTURAL UNIMPROVED: Through the review process the county has always tried to utilize as many sales as possible in the measurement of the agricultural properties. For assessment year 2008 there has been an increase in the number of qualified sales, therefore the utilization grid is demonstrating an increase in the percentage of usage, and is indicating that the sample has not been excessively trimmed. Of the sales deemed not qualified 10% were substantially improved sales, of the remaining 53% coded do not use; 48% were family transactions, 22% were trust distributions, and the remainder was a mixture of such things as partial interests, land exchanges, centrally assessed, corrective deeds, splits, and land use changes.

#### III. Analysis of the Preliminary, Trended Preliminary and R&O Median Ratio

The trended preliminary ratio is an alternative method to calculate a point estimate as an indicator of the level of value. This table compares the preliminary median ratio, trended preliminary median ratio, and R&O median ratio, presenting four years of data to reveal any trends in assessment practices. The analysis that follows compares the changes in these ratios to the assessment actions taken by the county assessor. If the county assessor's assessment practices treat all properties in the sales file and properties in the population in a similar manner, the trended preliminary ratio will correlate closely with the R&O median ratio. The following is the justification for the trended preliminary ratio:

#### Adjusting for Selective Reappraisal

The reliability of sales ratio statistics depends on unsold parcels being appraised in the same manner as sold parcels. Selective reappraisal of sold parcels distorts sales ratio results, possibly rendering them useless. Equally important, selective reappraisal of sold parcels ("sales chasing") is a serious violation of basic appraisal uniformity and is highly unprofessional. Oversight agencies must be vigilant to detect the practice if it occurs and take necessary corrective action.

[To monitor sales chasing] A preferred approach is to use only sales that occur after appraised values are determined. However, as long as values from the most recent appraisal year are used in ratio studies, this is likely to be impractical. A second approach is to use values from the previous assessment year, so that most (or all) sales in the study follow the date values were set. In this approach, measures of central tendency must be adjusted to reflect changes in value between the previous and current year. For example, assume that the measure of central tendency is 0.924 and, after excluding parcels with changes in use or physical characteristics, that the overall change in value between the previous and current assessment years is 6.3 percent. The adjusted measure of central tendency is  $0.924 \times 1.063 = 0.982$ . This approach can be effective in determining the level of appraisal, but measures of uniformity will be unreliable if there has been any meaningful reappraisal activity for the current year.

Gloudemans, Robert J., Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), p. 315.

	Preliminary Median	% Change in Assessed Value (excl. growth)	Trended Preliminary Ratio	R&O Median
2008	72.13	3.15	74.4	72.97
2007	71.69	0.85	72.3	72.29
2006	77.50	1.96	79.02	78.32
2005	75.36	1.29	76.33	77.03
2004	76.21	5.4	80.32	76.52
2003	70	7.1	74.97	77
2002	78	0.05	78.04	77
2001	77	-0.35	76.73	76

#### III. Analysis of the Preliminary, Trended Preliminary and R&O Median Ratio Continued

AGRICULTURAL UNIMPROVED: There is a 1.43 point difference between the Trended Preliminary Ratio and the R&O Ratio giving indication the two measures are similar and tend to support each other and an acceptable level of value. The action within the assessed base is consistent with the reported assessment action.

## IV. Analysis of Percentage Change in Total Assessed Value in the Sales File to Percentage Change in Assessed Value

This section analyzes the percentage change of the assessed values in the sales file, between the 2008 Preliminary Statistical Reports and the 2008 R&O Statistical Reports, to the percentage change in the assessed value of all real property base, by class, reported in the 2008 County Abstract of Assessment for Real Property, Form 45, excluding growth valuation, compared to the 2007 Certificate of Taxes Levied (CTL) Report. For purposes of calculating the percentage change in the sales file, only the sales in the most recent year of the study period are used. If assessment practices treat sold and unsold properties consistently, the percentage change in the sales file and assessed base will be similar. The analysis of this data assists in determining if the statistical representations calculated from the sales file are an accurate measure of the population. The following is justification for such an analysis:

#### Comparison of Average Value Changes

If sold and unsold properties are similarly appraised, they should experience similar changes in value over time. Accordingly, it is possible to compute the average change in value over a selected period for sold and unsold parcels and, if necessary, test to determine whether observed differences are significant. If, for example, values for vacant sold parcels in an area have increased by 45 percent since the previous reappraisal, but values for vacant unsold parcels have increased only 10 percent, sold and unsold parcels appear to have not been equally appraised. This apparent disparity between the treatment of sold and unsold properties provides an initial indication of poor assessment practices and should trigger further inquiry into the reasons for the disparity.

Gloudemans, Robert J., Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), p. 311.

% Change in Total Assessed Value in the Sa	les	% Change in Assessed Value (excl. growth)
5.92	2008	3.15
2.31	2007	0.85
0.83	2006	1.96
1.74	2005	1.29
9.71	2004	5.4
5.63	2003	7.1
-1.46	2002	0.05
-3.37	2001	-0.35

IV. Analysis of Percentage Change in Total Assessed Value in the Sales File to Percentage Change in Assessed Value Continued

AGRICULTURAL UNIMPROVED: The 2.77 point difference between the percent change in the sale compared to the percent change in the base is indicating the assessment actions had a more pronounced affect on the sales file. The calculation for the percent change in the sales file is based on 14 sales in the last year of the study period, 07/01/06 to 06/30/07, 3 of the sales are in market area one, 7 sales in market area 2, and 4 are in market are 3. The assessment actions were done from an analysis of each market area and as a result of the changing market conditions the values changed per market area. The percent of change would not necessarily be an equal amount for each market area and would be dependent upon the amount of the various land classifications within each.

#### V. Analysis of the R&O Median, Wgt. Mean, and Mean Ratios

There are three measures of central tendency calculated by the Division: median ratio, weighted mean ratio, and mean ratio. Since each measure of central tendency has strengths and weaknesses, the use of any statistic for equalization should be reconciled with the other two, as in an appraisal, based on the appropriateness in the use of the statistic for a defined purpose, the quantity of the information from which it was drawn, and the reliability of the data that was used in its calculation. An examination of the three measures can serve to illustrate important trends in the data if the measures do not closely correlate to each other.

The IAAO considers the median ratio the most appropriate statistical measure for use in determining level of value for "direct" equalization; the process of adjusting the values of classes or subclasses of property in response to the determination of level of value at a point above or below a particular range. Since the median ratio is considered neutral in relationship to either assessed value or selling price, its use in adjusting the class or subclass of properties will not change the relationships between assessed value and level of value already present within the class or subclass of properties, thus rendering an adjustment neutral in its impact on the relative tax burden to an individual property. Additionally, the median ratio is less influenced by the presence of extreme ratios, commonly called outliers. One outlier in a small sample size of sales can have controlling influence over the other measures of central tendency. The median ratio limits the distortion potential of an outlier.

The weighted mean ratio is viewed by the IAAO as the most appropriate statistical measure for "indirect" equalization; to ensure proper funding distribution of aid to political subdivisions, particularly when the distribution in part is based on the assessable value in that political subdivision, Standard on Ratio Studies, International Association of Assessing Officers, (2007). The weighted mean, because it is a value weighted ratio, best reflects a comparison of the assessed and market value of property in the political subdivision. If the distribution of aid to political subdivision, the measurement of central tendency used to analyze level of value should reflect the dollars of value available to be assessed. The weighted mean ratio does that more than either of the other measures of central tendency.

If the weighted mean ratio, because of its dollar-weighting feature, is significantly different from the median ratio, it may be an indication of other problems with assessment proportionality. When this occurs, an evaluation of the county's assessment practices and procedures is appropriate to discover remedies to the situation.

The mean ratio is used as a basis for other statistical calculations, such as the price related differential and coefficient of variation. However, the mean ratio has limited application in the analysis of level of value because it assumes a normal distribution of the data set around the mean ratio with each ratio having the same impact on the calculation regardless of the assessed value or the selling price.

### V. Analysis of the R&O Median, Wgt. Mean, and Mean Ratios Continued

	Median	Wgt. Mean	Mean
<b>R&amp;O</b> Statistics	72.97	74.27	73.43

AGRICULTURAL UNIMPROVED: All three measures of central tendency are within the required parameters and are supportive of one another. For direct equalization purposes the median measure of central tendency will be used to describe the level of value for the agricultural unimproved class of property.

#### VI. Analysis of R&O COD and PRD

In analyzing the statistical data of assessment quality, there are two measures primarily relied upon by assessment officials. The Coefficient of Dispersion, COD, is produced to measure assessment uniformity. A low COD tends to indicate good assessment uniformity as there is a smaller "spread" or dispersion of the ratios in the sales file. A COD of less than 15 suggests that there is good assessment uniformity. Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), pp. 235-237. The IAAO has issued performance standards for major property groups:

Single-family residences: a COD of 15 percent or less.

For newer and fairly homogeneous areas: a COD of 10 or less. Income-producing property: a COD of 20 or less, or in larger urban jurisdictions, 15 or less. Vacant land and other unimproved property, such as agricultural land: a COD of 20 or less. Rural residential and seasonal properties: a COD of 20 or less.

Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), p. 246.

The Price Related Differential, PRD, is produced to measure assessment vertical uniformity (progressivity or regressivity). For example, assessments are considered regressive if high value properties are under-assessed relative to low value properties. A PRD of greater than 100 suggests that high value properties are relatively under-assessed. Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), pp. 239-240. A PRD of less than 100 indicates that high value properties are relatively over-assessed. As a general rule, except for small samples, a PRD should range between 98 and 103. This range is centered slightly above 100 to allow for a slightly upward measurement bias inherent in the PRD. Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), p. 247.

The analysis in this section indicates whether the COD and PRD meet the performance standards described above.

	COD	PRD
<b>R&amp;O Statistics</b>	15.93	98.87
Difference	0	0

AGRICULTURAL UNIMPROVED: The coefficient of dispersion and the price-related differential are both within the acceptable ranges. Both statistics indicate that uniformity has been met for the agricultural unimproved class of property within Harlan County.

#### VII. Analysis of Change in Statistics Due to Assessor Actions

This section compares the statistical indicators from the Preliminary Statistical Reports to the same statistical indicators from the R&O Statistical Reports. The analysis that follows explains the changes in the statistical indicators in consideration of the assessment actions taken by the county assessor.

	<b>Preliminary Statistics</b>	<b>R&amp;O Statistics</b>	Change
Number of Sales	47	46	-1
Median	72.13	72.97	0.84
Wgt. Mean	70.29	74.27	3.98
Mean	71.57	73.43	1.86
COD	16.61	15.93	-0.68
PRD	101.83	<b>98.87</b>	-2.96
Min Sales Ratio	23.44	23.44	0
Max Sales Ratio	112.12	121.21	9.09

AGRICULTURAL UNIMPROVED: The change from the Preliminary Statistics to the R&O Statistics is a reflection of a market analysis of the agricultural unimproved sales by market area. The values within each of the land classification groups were changed as needed and reported by the assessor in the 2008 Assessment Survey. There is one less sale in the R&O statistics that was removed because it was substantially improved.

\*Growth is not typically identified separately within a parcel between ag-residential dwellings (line 3) and ag outbuildings (line 7), so for this display, all growth from ag-residential dwellings and ag outbuildings is shown in line 7.

## 2007 PLAN OF ASSESSMENT FOR HARLAN COUNTY

#### Introduction

Pursuant to Neb. Laws 2005, LB 263, Section 9, the Assessment Administrative Manager shall submit a Plan of Assessment to the County Board of Equalization on or before July 31, 2007 and to the Nebraska Department of Revenue Property Assessment Division on or before October 31, 2007, and every three years thereafter. The Assessment Administrative Manager shall update the Plan each year between the adoption of each three-year Plan.

#### **Purpose of the Plan of Assessment**

The Plan of Assessment and any update shall examine the level, quality, and uniformity of assessment in the county and may be derived from a Progress Report developed by the Property Assessment Division and presented to the Assessment Administrative Manager on or before July 31. The Plan shall propose actions to be taken for the following three years to assure uniform and proportionate assessments that are within the statutory and administrative guidelines for the level of value and quality of assessment. The Assessment Administrative Manager shall establish procedures and the course of action to be taken during the three-year Plan of Assessment.

#### **Responsibilities of Assessment**

Record Maintenance Mapping Ownership Report Generation Abstract Certification of Values School District Taxable Value Report CTL Tax List Corrections Administer Homestead Exemption Administer Personal Property Generate Tax Roll

#### **Responsibilities of Appraisal**

Value all Real Property

Develop Plan of Review Establish procedure for Pickup Work Review Sales Update all Values on an Annual Basis.

#### **Personnel Count**

#### Assessment

- 1- 1- Assessment Administrative Manager– required to pass test and maintain an Assessors Certificate issued by Nebraska Department of Revenue Property Assessment Division
- 2- 1- Assessment Clerk

#### Appraisal

- 1- 1- State Appraiser required to pass test and maintain an Appraisal license issued by State Appraisal Board. (Currently Certified Residential, passed State exam for Certified General & working on demonstration reports to be submitted to the State Appraisal Board)
- 2- 1- Assistant Appraiser-Vacant.

#### History

Harlan County became a State assumed county in July 1998. We had in place the same CAMA package that is now used by the State assumed counties. At this time all data is entered in the ATR file and also the appraisal file. This data is from our re-appraisal of Harlan County in 1996 and also new improvements and review of the sales for each period. In 2004  $\frac{1}{2}$  of the county was reviewed on site. At this time we have all sketches completed. In 2006 the 2<sup>nd</sup> half of the county was reviewed.

#### **Parcel Count**

Harlan County has approx 5062 parcels. Of this total we have the following:

1733 Residential with a value of	\$62,013,205
296 Commercial with a value of	\$19,191,420
2234 Agricultural with a value of	\$200,387,835
238 Rural acreages with a value of	\$ 16,811,380
5 Mineral producing with a value of	\$654,490
372 Recreational with a value of	\$6,726,200
184 Exempt parcels	
627 Personal Property Schedules	\$21,382,879
16 Centrally Assessed Property	\$10,348,768

Exhibit 42 - Page 89

#### **Cadastral Maps**

The county purchased cadastral maps in 1982. The county was re-flown and city maps were made on scale of 1'' = 100' and rural maps were 4 sections to a page and a scale of 1'' = 660'. At the present time, they are in dire need of up-dating and much repair work as 20+ years of use has taken its toll. We are still anxiously awaiting the new GIS program and hope to have it in place for 2008 so that we might be in line with neighboring counties that already have a GIS program in house and working.

#### **Property Record Cards**

We utilize the property record cards available from the Terra Scan system by printing ATR property card and also appraisal print-out. We also have aerial photos of rural parcels from a 1984 flight. The information from our re-appraisal of 1995-6 is on the computer as reference. We add new information as we gather it in review and pick-up work to further enhance our records. These records are in good condition. The Terra Scan system implemented a working and historical appraisal file that at the present needs design changes. We are currently working on an RFP for bids on the CAMA system contract.

#### **Real Estate Transfers (521's)**

The 521's are handled by the assessment staff for change of ownership, splits or combinations that need to be made, sales file info is up-dated and supporting data is attached. After this process, they are given to the appraisal staff for verification such as new digital pictures and reviewed for accuracy of information. Sales verification forms are mailed to the buyer and seller to be completed and returned to the office on agricultural 521's.

#### **Current plan for Harlan County**

#### Assessment /Sale Ratio Statistics for Tax Year 2007

Class	Ratio	C.O.D.*	P.R.D.**	
Residential	.98	10.37	102.59	
Commercial	100	17.66	105.81	
Ag-Land	.72	14.87	100.89	

\* Coefficient of Dispersion

\*\* Price Related Differential

#### Tax year 2008

We will continue our review of the county and plan to do ¼ of the townships each year. Will review statistics from previous year to find any hot spots to be corrected. Review Exhibit 42 - Page 90 market areas and also any new TIF areas. Conduct a pivot review. With the passage of LB701 the assessment office and the Republican River Basin NRD will compare irrigated acres. Ag land study i.e. irrigated grass, irrigated and dry acres, FSA certified maps. Review towns starting with Oxford. Review all IOLL's. Ag land acre values. Do normal pick-up work and sales review. Continue to monitor any changes in depreciation tables or site improvement tables due to market changes, also monitor our market areas. Implement our new GIS program.

#### Tax year 2009

We will plan to review another <sup>1</sup>/<sub>4</sub> of the townships this year. Review statistics to determine if any major or minor adjustments need to be made. Review market areas and any new TIF projects that develop. Do regular pick-up work and sales review. Verify accuracy of depreciation tables and site improvements tables with information from the market data. Watch river front property for private hunting and the possibility of special valuation. Hopefully continue use of GIS program. Continue to do county review as set up by the Property Assessment Division.

#### Tax year 2010

We will review the balance of the county that did not get done in 2009. Review statistics to see if any new data has appeared that would change any of our tables that are taken from the market. Review market areas for accuracy from the sales that have occurred. Do regular pick-up work based on building permits and information from the zoning director. Continue use of GIS. Watch for special valuation. Continue to do county review as set up by the Property Assessment Division.

#### Conclusion

All work done by the assessment or appraisal staff will be done in accordance with the Nebraska Department of Revenue Property Assessment Division rules and regulations. All statutes and mandates that may be issued will be followed in completion of our work. We look to our State Office Staff and Field Liaisons for any assistance they may provide to us in carrying out our assignments.

Respectfully,

Pamela A. Meisenbach Assessment Administrative Manager for Harlan & Hitchcock Counties Jeffrey S. Wilhelm Appraiser for Harlan & Hitchcock Counties

## 2008 Assessment Survey for Harlan County

## I. General Information

## A. Staffing and Funding Information

1.	Deputy(ies) on staff
	0
2.	Appraiser(s) on staff
	One appraiser and one assistant appraiser.
3.	Other full-time employees
	The administrative assessment manager and an assessment clerk.
4.	Other part-time employees
	0
5.	Number of shared employees
	The full-time appraiser is shared between Harlan and Hitchcock counties and other
	assessment offices as needed.
6	Assessor's requested hudget for current fiscal year
0.	\$ 103 186 36 was the total 2006-07 expenditures for the assessment functions
	\$ 105,100.50 was the total 2000 07 experienties for the assessment functions.
7.	Part of the budget that is dedicated to the computer system
	\$ 6,610.14 for 06-07.
8.	Adopted budget, or granted budget if different from above
	Non-applicable.
9.	Amount of the total budget set aside for appraisal work
	Non-applicable.
10.	Amount of the total budget set aside for education/workshops
	Non-applicable.
11.	Appraisal/Reappraisal budget, if not part of the total budget
	\$ 93,180.58 was the total 2006-07 expenditures for the appraisal functions.
12.	Other miscellaneous funds
	None

13.	Total budget
	\$ 196,366.94 was the total 2006-07 county expenses.
a.	Was any of last year's budget not used:
	Non-applicable.

## **B.** Computer, Automation Information and GIS

1.	Administrative software
	TerraScan
2.	CAMA software
	TerraScan
3.	Cadastral maps: Are they currently being used?
	Yes, but they are in very poor condition due to constant use for many years.
4.	Who maintains the Cadastral Maps?
	Office staff.
5.	Does the county have GIS software?
	No, but such a system should be considered due to the condition of the cadastral maps, replacing them and continuing to use such a mapping system would not benefit the county in terms of cost or employee time, counting dots and using a planimeter is very archaic. It would be better to move forward with the technological advancements of today and replace them with a geographical information system (GIS). The benefits of such a system would far outweigh the cost.
6.	Who maintains the GIS software and maps?
	Non-applicable.
7.	Personal Property software:
	TerraScan

## **C. Zoning Information**

1.	Does the county have zoning?
	Yes

2.	If so, is the zoning countywide?
	Yes
3.	What municipalities in the county are zoned?
	Alma
4.	When was zoning implemented?
	2002

## **D.** Contracted Services

1.	Appraisal Services
	Pritchard & Abbott have been contracted to do the oil and gas mineral appraisals.
2.	Other services
	None

Certification

## Certification

This is to certify that the 2008 Reports and Opinions of the Property Tax Administrator have been sent to the following:

•Five copies to the Tax Equalization and Review Commission, by hand delivery.

•One copy to the Harlan County Assessor, by certified mail, return receipt requested, 7006 2760 0000 6387 5746.

Dated this 7th day of April, 2008.

Cyndy Thompson

Department of Revenue, Property Assessment Division
