Preface

The requirements for the assessment of real property for the purposes of property taxation are found in Nebraska law. The Constitution of Nebraska requires that "taxes shall be levied by valuation uniformly and proportionately upon all real property and franchises as defined by the Legislature except as otherwise provided in or permitted by this Constitution." Neb. Const. art. VIII, sec. 1 (1) (1998). The uniform standard for the assessed value of real property for tax purposes is actual value, which is defined by law as "the market value of real property in the ordinary course of trade." Neb. Rev. Stat. §77-112 (R.R.S., 2003). The assessment level for all real property, except agricultural land and horticultural land, is one hundred percent of actual value. The assessment level for agricultural land and horticultural land, hereinafter referred to as agricultural land, is seventy-five percent of actual value. Neb. Rev. Stat. §77-201(1) and (2)(R.S. Supp., 2007). More importantly, for purposes of equalization, similar properties must be assessed at the same proportion of actual value when compared to each other. Achieving the constitutional requirement of proportionality ultimately ensures the balance equity in the imposition of the property tax by local units of government on each parcel of real property.

The assessment process, implemented under the authority of the county assessor, seeks to value similarly classed properties at the same proportion to actual value. This is not a precise mathematical process, but instead depends on the judgment of the county assessor, based on his or her analysis of relevant factors that affect the actual value of real property. Nebraska law provides ranges of acceptable levels of value that must be met to achieve the uniform and proportionate valuation of classes and subclasses of real property in each county. Neb. Rev. Stat. §77-5023 (R.S. Supp., 2007) requires that all classes of real property, except agricultural land, be assessed within the range of ninety-two and one hundred percent of actual value; the class of agricultural land receiving special valuation be assessed within the range sixty-nine to seventy-five percent of its special value; and, when the land is disqualified for special value the recapture value be assessed at actual value.

To ensure that the classes of real property are assessed at these required levels of actual value, the Department of Revenue Property Assessment Division, hereinafter referred to as the Division, is annually responsible for analyzing and measuring the assessment performance of each county. This responsibility includes requiring the Property Tax Administrator to prepare statistical and narrative reports for the Tax Equalization and Review Commission, hereinafter referred to as the Commission, and the county assessors. Pursuant to Neb. Rev. Stat. §77-5027 (R.S. Supp., 2005):

(2) ... the Property Tax Administrator shall prepare and deliver to the commission and to each county assessor his or her annual reports and opinions.

(3) The annual reports and opinions of the Property Tax Administrator shall contain statistical and narrative reports informing the commission of the level of value and the quality of assessment of the classes and subclasses of real property within the county and a certification of the opinion of the Property Tax

Administrator regarding the level of value and quality of assessment of the classes and subclasses of real property in the county.

(4) In addition to an opinion of level of value and quality of assessment in the county, the Property Tax Administrator may make nonbinding recommendations for consideration by the commission.

The narrative and statistical reports contained in the Reports and Opinions of the Property Tax Administrator, hereinafter referred to as the R&O, provide a thorough, concise analysis of the assessment process implemented by each county assessor to reach the levels of value and quality of assessment required by Nebraska law. The Property Tax Administrator's opinion of level of value and quality of assessment achieved by each county assessor is a conclusion based upon all the data provided by the county assessor and gathered by the Division regarding the assessment activities during the preceding year. This is done in recognition of the fact that the measurement of assessment compliance, in terms of the concepts of actual value and uniformity and proportionality mandated by Nebraska law, requires both statistical and narrative analysis.

The Division is required by Neb. Rev. Stat. §77-1327 (R. S. Supp., 2007) to develop and maintain a state-wide sales file of all arm's length transactions. From this sales file the Division prepares an assessment sales ratio study in compliance with acceptable mass appraisal standards. The assessment sales ratio study is the primary mass appraisal performance evaluation tool. From the sales file, the Division prepares statistical analysis from a non-randomly selected set of observations, known as sales, from which inferences about the population, known as a class or subclass of real property, may be drawn. The statistical reports contained in the R&O are developed in compliance with standards developed by the International Association of Assessing Officers, hereinafter referred to as the IAAO.

However, just as the valuation of property is sometimes more art than science, a narrative analysis of assessment practices in each county is necessary to give proper context to the statistical inferences from the assessment sales ratio study. There may be instances when the analysis of assessment practices outweighs or limits the reliability of the statistical inferences of central tendency or quality measures. This may require an opinion of the level of value that is not identical to the result of the statistical calculation. The Property Tax Administrator's goal is to provide statistical and narrative analysis of the assessment level and practices to the Commission, providing the Commission with the most complete picture possible of the true level of value and quality of assessment in each county.

The Property Tax Administrator's opinions of level of value and quality of assessment are stated as a single numeric representation for level of value and a simple judgment regarding the quality of assessment practices. Based on the information collected in developing this report the Property Tax Administrator may feel further recommendations must be stated for a county to assist the Commission in determining the level of value and quality of assessment within a county. These opinions are made only after considering all narrative and statistical analysis provided by the county assessor and gathered by the Division. An evaluation of these opinions must only be made after considering all other information provided in the R&O. Finally, after reviewing all of the information available to the Property Tax Administrator regarding the level and quality of assessment for classes and subclasses of real property in each county, the Property Tax Administrator, pursuant to Neb. Rev. Stat. §77-5027(4) (R.S. Supp., 2005), may make recommendations for adjustments to value for classes and subclasses of property. All of the factors relating to the Property Tax Administrator's determination of level of value and quality of assessment shall be taken into account in the making of such recommendations. Such recommendations are not binding on the Commission.

Opinions

2008 Opinions of the Property Tax Administrator for Stanton County

My opinions and recommendations are stated as a conclusion based on all of the factors known to me about the assessment practices and statistical analysis for this county. See, Neb. Rev. Stat. §77-5027 (R. S. Supp., 2005). While I rely primarily on the median assessment sales ratio from the Qualified Statistical Reports for each class of real property, my opinion of level of value for a class of real property may be determined from other evidence contained in the RO. Although my primary resource regarding quality of assessment are the performance standards issued by the IAAO, my opinion of quality of assessment for a class of real property may be influenced by the assessment practices of the county assessor.

Residential Real Property

It is my opinion that the level of value of the class of residential real property in Stanton County is 94% of actual value. It is my opinion that the quality of assessment for the class of residential real property in Stanton County is in compliance with generally accepted mass appraisal practices.

Commercial Real Property

It is my opinion that the level of value of the class of commercial real property in Stanton County is 83% of actual value. It is my opinion that the quality of assessment for the class of commercial real property in Stanton County is not in compliance with generally accepted mass appraisal practices.

Agricultural Land

It is my opinion that the level of value of the class of agricultural land in Stanton County is 69% of actual value. It is my opinion that the quality of assessment for the class of agricultural land in Stanton County is in compliance with generally accepted mass appraisal practices.

Dated this 7th day of April, 2008.

Kuth a. Sorense

Ruth A. Sorensen Property Tax Administrator

Stanton County 2008 Assessment Actions taken to address the following property classes/subclasses:

Residential

Current market study has been completed on all residential properties by location.

For 2008, we updated with new pricing and established a new depreciation/quality/condition table for the suburban area by Norfolk known as Woodland Park. There are 603 parcels in this area. The lots were re-valued using the square foot method rather than the front footage method that had been used in the past.

Our office has reviewed and updated the residential properties that reported change because of building permits and information sheets.

2008 Assessment Survey for Stanton County

Residential Appraisal Information (Includes Urban, Suburban and Rural Residential)

1.	Data collection done by:
	Staff
2.	Valuation done by:
	Staff
3.	Pickup work done by whom:
	Listers, Staff
4	
4.	What is the date of the Replacement Cost New data (Marshall-Swift) that are
	used to value this property class? 2004
	2004 2008 Woodland Park
5.	What was the last year the depreciation schedule for this property class was
5.	developed using market-derived information?
	2006
	2008 Woodland Park
6.	What was the last year that the Market or Sales Comparison Approach was
0.	used to estimate the market value of the properties in this class?
	2008
7.	Number of market areas/neighborhoods for this property class:
	14
8.	How are these defined?
	Assessor location by towns, rural, suburban areas
9.	Is "Assessor Location" a usable valuation identity?
	Yes
10	
10.	Does the assessor location "suburban" mean something other than rural
	residential? (that is, does the "suburban" location have its own market?)
	Yes

11.	What is the market significance of the suburban location as defined in Reg. 10-001.07B? (Suburban shall mean a parcel of real property located outside of the limits of an incorporated city or village, but within the legal jurisdiction of an incorporated city or village.)
	The suburban is located outside the city limits of Norfolk in a subdivision named Woodland Park.
12.	Are the county's ag residential and rural residential improvements classified and valued in the same manner?
	Yes

Residential Permit Numbers:

Residential Correlation

Residential Real Property

I. Correlation

RESIDENTIAL: The county reported that a market study was completed on all residential property by location. Woodland Park, a suburban subclass, the lot values were updated. The improvements were updated with new pricing, quality and condition review and a depreciation update. This included 603 parcels. Pick up work was also completed.

The county has utilized a reasonable percentage of available sales and did not excessively trim sales. The Trended Preliminary Median Ratio and the R&O Median Ratio are relatively close. The difference between the Percent Change to the Sales File and the Percent Change to the Assessed Value is a little over one percentage point and supports the assessment actions as well.

The coefficient of dispersion and the price related differential are slightly outside the acceptable parameters.

Analysis of all six tables indicates that the county has achieved an acceptable level of value for the 2008 assessment year. Based on the information available and the assessment practices of the county the best indicator of the level of value is the median level for the 2008 assessment year.

II. Analysis of Percentage of Sales Used

This section documents the utilization of total sales compared to qualified sales in the sales file. Neb. Rev. Stat. §77-1327(2) (R. S. Supp., 2007) provides that all sales are deemed to be arm's length transactions unless determined to be otherwise under professionally accepted mass appraisal techniques. The county assessor is responsible for the qualification of the sales included in the residential sales file. The Division periodically reviews the procedures utilized by the county assessor to qualify/disqualify sales.

The Standard on Ratio Studies, International Association of Assessing Officials, (2007), indicates that low levels of sale utilization may indicate excessive trimming by the county assessor. Excessive trimming, the arbitrary exclusion or adjustment of arm's length transactions, may indicate an attempt to inappropriately exclude arm's length transactions to create the appearance of a higher level of value and quality of assessment. The sales file, in a case of excess trimming, will fail to properly represent the level of value and quality of assessment of the population of residential real property.

	Total Sales	Qualified Sales	Percent Used
2008	229	138	60.26
2007	221	162	73.3
2006	242	181	74.79
2005	245	180	73.47
2004	240	171	71.25
2003	218	164	75.23
2002	233	189	81.12
2001	252	195	77.38

RESIDENTIAL: The analysis of sales grid indicates that a reasonable percentage of all available sales for the sales study were considered and indicates that the county has not excessively trimmed the residential sales. The lower number of qualified sales is a reflection of several parcels being substantially changed since the date of sale.

III. Analysis of the Preliminary, Trended Preliminary and R&O Median Ratio

The trended preliminary ratio is an alternative method to calculate a point estimate as an indicator of the level of value. This table compares the preliminary median ratio, trended preliminary median ratio, and R&O median ratio, presenting four years of data to reveal any trends in assessment practices. The analysis that follows compares the changes in these ratios to the assessment actions taken by the county assessor. If the county assessor's assessment practices treat all properties in the sales file and properties in the population in a similar manner, the trended preliminary ratio will correlate closely with the R&O median ratio. The following is the justification for the trended preliminary ratio:

Adjusting for Selective Reappraisal

The reliability of sales ratio statistics depends on unsold parcels being appraised in the same manner as sold parcels. Selective reappraisal of sold parcels distorts sales ratio results, possibly rendering them useless. Equally important, selective reappraisal of sold parcels ("sales chasing") is a serious violation of basic appraisal uniformity and is highly unprofessional. Oversight agencies must be vigilant to detect the practice if it occurs and take necessary corrective action.

[To monitor sales chasing] A preferred approach is to use only sales that occur after appraised values are determined. However, as long as values from the most recent appraisal year are used in ratio studies, this is likely to be impractical. A second approach is to use values from the previous assessment year, so that most (or all) sales in the study follow the date values were set. In this approach, measures of central tendency must be adjusted to reflect changes in value between the previous and current year. For example, assume that the measure of central tendency is 0.924 and, after excluding parcels with changes in use or physical characteristics, that the overall change in value between the previous and current assessment years is 6.3 percent. The adjusted measure of central tendency is $0.924 \times 1.063 = 0.982$. This approach can be effective in determining the level of appraisal, but measures of uniformity will be unreliable if there has been any meaningful reappraisal activity for the current year.

Gloudemans, Robert J., Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), p. 315.

	Preliminary Median	% Change in Assessed Value (excl. growth)	Trended Preliminary Ratio	R&O Median
2008	93.59	3.56	96.92	93.92
2007	93.33	0.9	94.17	94.27
2006	91.86	5.16	96.6	94.35
2005	89.21	3.74	92.55	93.00
2004	90.46	3.65	93.76	93.90
2003	90	4.28	93.85	93
2002	92	2.61	94.4	93
2001	90	0.87	90.78	90

III. Analysis of the Preliminary, Trended Preliminary and R&O Median Ratio Continued

RESIDENTIAL: The Trended Preliminary Median ratio and the R& O median ratio is three points apart. There is no information available to suggest that the median ratio is not the best representation of the level of value for the residential class.

IV. Analysis of Percentage Change in Total Assessed Value in the Sales File to Percentage Change in Assessed Value

This section analyzes the percentage change of the assessed values in the sales file, between the 2008 Preliminary Statistical Reports and the 2008 R&O Statistical Reports, to the percentage change in the assessed value of all real property base, by class, reported in the 2008 County Abstract of Assessment for Real Property, Form 45, excluding growth valuation, compared to the 2007 Certificate of Taxes Levied (CTL) Report. For purposes of calculating the percentage change in the sales file, only the sales in the most recent year of the study period are used. If assessment practices treat sold and unsold properties consistently, the percentage change in the sales file and assessed base will be similar. The analysis of this data assists in determining if the statistical representations calculated from the sales file are an accurate measure of the population. The following is justification for such an analysis:

Comparison of Average Value Changes

If sold and unsold properties are similarly appraised, they should experience similar changes in value over time. Accordingly, it is possible to compute the average change in value over a selected period for sold and unsold parcels and, if necessary, test to determine whether observed differences are significant. If, for example, values for vacant sold parcels in an area have increased by 45 percent since the previous reappraisal, but values for vacant unsold parcels have increased only 10 percent, sold and unsold parcels appear to have not been equally appraised. This apparent disparity between the treatment of sold and unsold properties provides an initial indication of poor assessment practices and should trigger further inquiry into the reasons for the disparity.

Gloudemans, Robert J., Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), p. 311.

IV. Analysis of Percentage Change in Total Assessed Value in the Sales File to Percentage
Change in Assessed Value Continued

% Change in Total Assessed Value in the Sale	s	% Change in Assessed Value (excl. growth)
2.54	2008	3.56
1.63	2007	0.9
4.59	2006	5.16
8.02	2005	3.74
5.7	2004	3.65
2	2003	4
3.41	2002	2.61
0.21	2001	0.87

RESIDENTIAL: The difference between the percent change to the sales file and the percent change to the assessed value base is a little over one percentage point and supports the assessment practices of the unsold and sold properties.

V. Analysis of the R&O Median, Wgt. Mean, and Mean Ratios

There are three measures of central tendency calculated by the Division: median ratio, weighted mean ratio, and mean ratio. Since each measure of central tendency has strengths and weaknesses, the use of any statistic for equalization should be reconciled with the other two, as in an appraisal, based on the appropriateness in the use of the statistic for a defined purpose, the quantity of the information from which it was drawn, and the reliability of the data that was used in its calculation. An examination of the three measures can serve to illustrate important trends in the data if the measures do not closely correlate to each other.

The IAAO considers the median ratio the most appropriate statistical measure for use in determining level of value for "direct" equalization; the process of adjusting the values of classes or subclasses of property in response to the determination of level of value at a point above or below a particular range. Since the median ratio is considered neutral in relationship to either assessed value or selling price, its use in adjusting the class or subclass of properties will not change the relationships between assessed value and level of value already present within the class or subclass of properties, thus rendering an adjustment neutral in its impact on the relative tax burden to an individual property. Additionally, the median ratio is less influenced by the presence of extreme ratios, commonly called outliers. One outlier in a small sample size of sales can have controlling influence over the other measures of central tendency. The median ratio limits the distortion potential of an outlier.

The weighted mean ratio is viewed by the IAAO as the most appropriate statistical measure for "indirect" equalization; to ensure proper funding distribution of aid to political subdivisions, particularly when the distribution in part is based on the assessable value in that political subdivision, Standard on Ratio Studies, International Association of Assessing Officers, (2007). The weighted mean, because it is a value weighted ratio, best reflects a comparison of the assessed and market value of property in the political subdivision. If the distribution of aid to political subdivision, the measurement of central tendency used to analyze level of value should reflect the dollars of value available to be assessed. The weighted mean ratio does that more than either of the other measures of central tendency.

If the weighted mean ratio, because of its dollar-weighting feature, is significantly different from the median ratio, it may be an indication of other problems with assessment proportionality. When this occurs, an evaluation of the county's assessment practices and procedures is appropriate to discover remedies to the situation.

The mean ratio is used as a basis for other statistical calculations, such as the price related differential and coefficient of variation. However, the mean ratio has limited application in the analysis of level of value because it assumes a normal distribution of the data set around the mean ratio with each ratio having the same impact on the calculation regardless of the assessed value or the selling price.

V. Analysis of the R&O Median, Wgt. Mean, and Mean Ratios Continued

	Median	Wgt. Mean	Mean
R&O Statistics	93.92	89.98	93.15

RESIDENTIAL: When reviewing the three measures of central tendency they are similar and supportive of the assessment actions in Stanton County. The median and mean are within the acceptable range and the weighted mean is slightly below.

VI. Analysis of R&O COD and PRD

In analyzing the statistical data of assessment quality, there are two measures primarily relied upon by assessment officials. The Coefficient of Dispersion, COD, is produced to measure assessment uniformity. A low COD tends to indicate good assessment uniformity as there is a smaller "spread" or dispersion of the ratios in the sales file. A COD of less than 15 suggests that there is good assessment uniformity. Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), pp. 235-237. The IAAO has issued performance standards for major property groups:

Single-family residences: a COD of 15 percent or less.

For newer and fairly homogeneous areas: a COD of 10 or less. Income-producing property: a COD of 20 or less, or in larger urban jurisdictions, 15 or less. Vacant land and other unimproved property, such as agricultural land: a COD of 20 or less. Rural residential and seasonal properties: a COD of 20 or less.

Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), p. 246.

The Price Related Differential, PRD, is produced to measure assessment vertical uniformity (progressivity or regressivity). For example, assessments are considered regressive if high value properties are under-assessed relative to low value properties. A PRD of greater than 100 suggests that high value properties are relatively under-assessed. Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), pp. 239-240. A PRD of less than 100 indicates that high value properties are relatively over-assessed. As a general rule, except for small samples, a PRD should range between 98 and 103. This range is centered slightly above 100 to allow for a slightly upward measurement bias inherent in the PRD. Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), p. 247.

The analysis in this section indicates whether the COD and PRD meet the performance standards described above.

	COD	PRD
R&O Statistics	16.95	103.52
Difference	1.95	0.52

RESIDENTIAL: The coefficient of dispersion are only slightly outside the acceptable parameters, but not unrealistic. They support the assessment actions of the county.

VII. Analysis of Change in Statistics Due to Assessor Actions

This section compares the statistical indicators from the Preliminary Statistical Reports to the same statistical indicators from the R&O Statistical Reports. The analysis that follows explains the changes in the statistical indicators in consideration of the assessment actions taken by the county assessor.

	Preliminary Statistics	R&O Statistics	Change
Number of Sales	142	138	-4
Median	93.59	93.92	0.33
Wgt. Mean	88.43	89.98	1.55
Mean	92.68	93.15	0.47
COD	17.73	16.95	-0.78
PRD	104.81	103.52	-1.29
Min Sales Ratio	4.19	4.64	0.45
Max Sales Ratio	270.62	270.62	0

RESIDENTIAL: The number of sales between the preliminary statistics and the R&O statistics decreased by four sales. The county concentrated on the Woodland Park/Suburban subclass for the 2008 assessment year.

Stanton County 2008 Assessment Actions taken to address the following property classes/subclasses:

Commercial

Stanton County is currently contracted with Bill Kaiser for a complete reappraisal of all commercial properties. Bill started review and gathering information October, 2007 and is contracted for completion by April 1, 2008. We will finalize the information and add the value in 2009.

For the current year our office has added any new construction or changes reported by building permits and/or information sheets.

2008 Assessment Survey for Stanton County

Commercial/Industrial Appraisal Information

1.	Data collection done by:
	Kaiser Appraisal – general
	Wayne Kubert for Nucor
2.	Valuation done by:
<i>∠</i> .	Appraisers
	Appraisers
3.	Pickup work done by whom:
	Appraisers
4.	What is the date of the Replacement Cost New data (Marshall-Swift) that are used to value this property class?
	1988
5.	What was the last year the depreciation schedule for this property class was developed using market-derived information?
	1998
6.	When was the last time that the Income Approach was used to estimate or establish the market value of the properties in this class?
	N/A
7.	When was the last year that the Market or Sales Comparison Approach was used to estimate the market value of the properties in this class?
	Sales comparison done yearly. In the process of updated pricing to be completed and put on in 2009.
8.	Number of market areas/neighborhoods for this property class?
	3
9.	How are these defined?
	Stanton, Pilger and Rural
10.	Is "Assessor Location" a usable valuation identity?
	yes
11.	Does the assessor location "suburban" mean something other than rural
	commercial? (that is, does the "suburban" location have its own market?)
	No

12.	What is the market significance of the suburban location as defined in Reg. 10-
	001.07B? (Suburban shall mean a parcel of real property located outside of the
	limits of an incorporated city or village, but within the legal jurisdiction of an
	incorporated city or village.)

Commercial Correlations

Commerical Real Property

I. Correlation

COMMERCIAL: The county is aware that the commercial class of property has been an issue for several years. The county has contracted with Bill Kaiser to complete a reappraisal of the commercial class of property. The project was started in October, 2007. The information is not complete to implement for the 2008 assessment year so the county plans to utilize the reappraisal in 2009.

The county did complete the pickup work for the commercial class for 2008.

Analysis of the tables indicated that a reasonable percentage of available sales were utilized. The relationship of the remaining tables is somewhat distorted due to the fact that of the 14 sales 10 of them are located in the village of Stanton. A more realistic reflection of the analysis would be to consider the assessor location of Stanton when determining the level of value for the county.

There are only 14 sales in the commercial class. At this time, I do not feel it will benefit the county to make any changes to the class as a whole to achieve a level of value within the acceptable range. Ten of those sales are located in the village of Stanton and indicate a median level of assessment at 93.97%. Since the majority of the sales are located in the village of Stanton it is my opinion that the median level for the commercial class would be 94%.

II. Analysis of Percentage of Sales Used

This section documents the utilization of total sales compared to qualified sales in the sales file. Neb. Rev. Stat. §77-1327(2) (R. S. Supp., 2007) provides that all sales are deemed to be arm's length transactions unless determined to be otherwise under professionally accepted mass appraisal techniques. The county assessor is responsible for the qualification of the sales included in the residential sales file. The Division periodically reviews the procedures utilized by the county assessor to qualify/disqualify sales.

The Standard on Ratio Studies, International Association of Assessing Officials, (2007), indicates that low levels of sale utilization may indicate excessive trimming by the county assessor. Excessive trimming, the arbitrary exclusion or adjustment of arm's length transactions, may indicate an attempt to inappropriately exclude arm's length transactions to create the appearance of a higher level of value and quality of assessment. The sales file, in a case of excess trimming, will fail to properly represent the level of value and quality of assessment of the population of residential real property.

	Total Sales	Qualified Sales	Percent Used
2008	26	14	53.85
2007	25	11	44
2006	18	9	50
2005	15	6	40
2004	19	10	52.63
2003	27	15	55.56
2002	25	12	48
2001	32	17	53.12

COMMERCIAL: The analysis of the sales grid indicates that a reasonable percentage of the available sales for the commercial class were considered when determining the valuation process for the 2008 assessment year. Of the 14 qualified sales 10 of them are in one assessor location and would have a direct influence of the level of value.

III. Analysis of the Preliminary, Trended Preliminary and R&O Median Ratio

The trended preliminary ratio is an alternative method to calculate a point estimate as an indicator of the level of value. This table compares the preliminary median ratio, trended preliminary median ratio, and R&O median ratio, presenting four years of data to reveal any trends in assessment practices. The analysis that follows compares the changes in these ratios to the assessment actions taken by the county assessor. If the county assessor's assessment practices treat all properties in the sales file and properties in the population in a similar manner, the trended preliminary ratio will correlate closely with the R&O median ratio. The following is the justification for the trended preliminary ratio:

Adjusting for Selective Reappraisal

The reliability of sales ratio statistics depends on unsold parcels being appraised in the same manner as sold parcels. Selective reappraisal of sold parcels distorts sales ratio results, possibly rendering them useless. Equally important, selective reappraisal of sold parcels ("sales chasing") is a serious violation of basic appraisal uniformity and is highly unprofessional. Oversight agencies must be vigilant to detect the practice if it occurs and take necessary corrective action.

[To monitor sales chasing] A preferred approach is to use only sales that occur after appraised values are determined. However, as long as values from the most recent appraisal year are used in ratio studies, this is likely to be impractical. A second approach is to use values from the previous assessment year, so that most (or all) sales in the study follow the date values were set. In this approach, measures of central tendency must be adjusted to reflect changes in value between the previous and current year. For example, assume that the measure of central tendency is 0.924 and, after excluding parcels with changes in use or physical characteristics, that the overall change in value between the previous and current assessment years is 6.3 percent. The adjusted measure of central tendency is $0.924 \times 1.063 = 0.982$. This approach can be effective in determining the level of appraisal, but measures of uniformity will be unreliable if there has been any meaningful reappraisal activity for the current year.

Gloudemans, Robert J., Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), p. 315.

	Preliminary Median	% Change in Assessed Value (excl. growth)	Trended Preliminary Ratio	R&O Median
2008	83.29	-8.43	76.27	83.29
2007	65.53	0.34	65.76	65.53
2006	65.78	-0.67	65.34	60.46
2005	62.25	-0.08	62.2	62.25
2004	71.50	0.22	71.65	82.69
2003	95	0.02	95.02	95
2002	98	-0.21	97.79	98
2001	95	0.56	95.53	95

III. Analysis of the Preliminary, Trended Preliminary and R&O Median Ratio Continued

COMMERCIAL: The Trended Preliminary Median Ratio and the R&O Median Ratio are not a true representation of the level of value for the commercial class. The village of Stanton represents 71% of the sales file base and the median level for that is 93.97% which would be a more realistic level of value.

IV. Analysis of Percentage Change in Total Assessed Value in the Sales File to Percentage Change in Assessed Value

This section analyzes the percentage change of the assessed values in the sales file, between the 2008 Preliminary Statistical Reports and the 2008 R&O Statistical Reports, to the percentage change in the assessed value of all real property base, by class, reported in the 2008 County Abstract of Assessment for Real Property, Form 45, excluding growth valuation, compared to the 2007 Certificate of Taxes Levied (CTL) Report. For purposes of calculating the percentage change in the sales file, only the sales in the most recent year of the study period are used. If assessment practices treat sold and unsold properties consistently, the percentage change in the sales file and assessed base will be similar. The analysis of this data assists in determining if the statistical representations calculated from the sales file are an accurate measure of the population. The following is justification for such an analysis:

Comparison of Average Value Changes

If sold and unsold properties are similarly appraised, they should experience similar changes in value over time. Accordingly, it is possible to compute the average change in value over a selected period for sold and unsold parcels and, if necessary, test to determine whether observed differences are significant. If, for example, values for vacant sold parcels in an area have increased by 45 percent since the previous reappraisal, but values for vacant unsold parcels have increased only 10 percent, sold and unsold parcels appear to have not been equally appraised. This apparent disparity between the treatment of sold and unsold properties provides an initial indication of poor assessment practices and should trigger further inquiry into the reasons for the disparity.

Gloudemans, Robert J., Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), p. 311.

IV. Analysis of Percentage Change in Total Assessed Value in the Sales File to Percentage
Change in Assessed Value Continued

% Change in Total Assessed Value in the Sale	es	% Change in Assessed Value (excl. growth)
0	2008	-8.43
10.4	2007	0.34
2.92	2006	-0.67
0	2005	-0.08
0	2004	0.22
0	2003	0
0	2002	-0.21
4.4	2001	0.56

COMMERCIAL: The relationship between the change in total assessed value to the sales file and the change in assessed value supports the assessment actions in the county.

V. Analysis of the R&O Median, Wgt. Mean, and Mean Ratios

There are three measures of central tendency calculated by the Division: median ratio, weighted mean ratio, and mean ratio. Since each measure of central tendency has strengths and weaknesses, the use of any statistic for equalization should be reconciled with the other two, as in an appraisal, based on the appropriateness in the use of the statistic for a defined purpose, the quantity of the information from which it was drawn, and the reliability of the data that was used in its calculation. An examination of the three measures can serve to illustrate important trends in the data if the measures do not closely correlate to each other.

The IAAO considers the median ratio the most appropriate statistical measure for use in determining level of value for "direct" equalization; the process of adjusting the values of classes or subclasses of property in response to the determination of level of value at a point above or below a particular range. Since the median ratio is considered neutral in relationship to either assessed value or selling price, its use in adjusting the class or subclass of properties will not change the relationships between assessed value and level of value already present within the class or subclass of properties, thus rendering an adjustment neutral in its impact on the relative tax burden to an individual property. Additionally, the median ratio is less influenced by the presence of extreme ratios, commonly called outliers. One outlier in a small sample size of sales can have controlling influence over the other measures of central tendency. The median ratio limits the distortion potential of an outlier.

The weighted mean ratio is viewed by the IAAO as the most appropriate statistical measure for "indirect" equalization; to ensure proper funding distribution of aid to political subdivisions, particularly when the distribution in part is based on the assessable value in that political subdivision, Standard on Ratio Studies, International Association of Assessing Officers, (2007). The weighted mean, because it is a value weighted ratio, best reflects a comparison of the assessed and market value of property in the political subdivision. If the distribution of aid to political subdivision, the measurement of central tendency used to analyze level of value should reflect the dollars of value available to be assessed. The weighted mean ratio does that more than either of the other measures of central tendency.

If the weighted mean ratio, because of its dollar-weighting feature, is significantly different from the median ratio, it may be an indication of other problems with assessment proportionality. When this occurs, an evaluation of the county's assessment practices and procedures is appropriate to discover remedies to the situation.

The mean ratio is used as a basis for other statistical calculations, such as the price related differential and coefficient of variation. However, the mean ratio has limited application in the analysis of level of value because it assumes a normal distribution of the data set around the mean ratio with each ratio having the same impact on the calculation regardless of the assessed value or the selling price.

V. Analysis of the R&O Median, Wgt. Mean, and Mean Ratios Continued

	Median	Wgt. Mean	Mean
R&O Statistics	83.29	94.77	82.82

COMMERCIAL: The median and the mean ratios are all statistically outside the acceptable parameters. The only measure of central tendency within is the weighted mean. Based on the fact that ten of the fourteen sales are located in the assessor location of Stanton, the measures are not reliable and the level of value of Stanton with a median of 93.97, weighted mean of 109.37 and a mean of 84.4. Considering this fact, the measure to establish the level of value is best represented in the assessor location of Stanton and would be 94%.

VI. Analysis of R&O COD and PRD

In analyzing the statistical data of assessment quality, there are two measures primarily relied upon by assessment officials. The Coefficient of Dispersion, COD, is produced to measure assessment uniformity. A low COD tends to indicate good assessment uniformity as there is a smaller "spread" or dispersion of the ratios in the sales file. A COD of less than 15 suggests that there is good assessment uniformity. Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), pp. 235-237. The IAAO has issued performance standards for major property groups:

Single-family residences: a COD of 15 percent or less.

For newer and fairly homogeneous areas: a COD of 10 or less. Income-producing property: a COD of 20 or less, or in larger urban jurisdictions, 15 or less. Vacant land and other unimproved property, such as agricultural land: a COD of 20 or less. Rural residential and seasonal properties: a COD of 20 or less.

Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), p. 246.

The Price Related Differential, PRD, is produced to measure assessment vertical uniformity (progressivity or regressivity). For example, assessments are considered regressive if high value properties are under-assessed relative to low value properties. A PRD of greater than 100 suggests that high value properties are relatively under-assessed. Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), pp. 239-240. A PRD of less than 100 indicates that high value properties are relatively over-assessed. As a general rule, except for small samples, a PRD should range between 98 and 103. This range is centered slightly above 100 to allow for a slightly upward measurement bias inherent in the PRD. Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), p. 247.

The analysis in this section indicates whether the COD and PRD meet the performance standards described above.

	COD	PRD
R&O Statistics	35.67	87.39
Difference	15.67	-10.61

COMMERCIAL: The coefficient of dispersion and price related differential are well outside the acceptable level.

VII. Analysis of Change in Statistics Due to Assessor Actions

This section compares the statistical indicators from the Preliminary Statistical Reports to the same statistical indicators from the R&O Statistical Reports. The analysis that follows explains the changes in the statistical indicators in consideration of the assessment actions taken by the county assessor.

	Preliminary Statistics	R&O Statistics	Change
Number of Sales	14	14	0
Median	83.29	83.29	0
Wgt. Mean	94.77	94.77	0
Mean	82.82	82.82	0
COD	35.67	35.67	0
PRD	87.39	87.39	0
Min Sales Ratio	33.33	33.33	0
Max Sales Ratio	142.31	142.31	0

COMMERCIAL: Table VII indicates that one sale was removed from the sales file following the preliminary statistics. That one sale was considered substantially changed. The county has reported minimal changes for the 2008 assessment year with plans to have a completed reappraisal of the commercial class in place in 2009.

Stanton County 2008 Assessment Actions taken to address the following property classes/subclasses:

Agricultural

Throughout the year this office has plans of beginning its whole county inspection/update by the process that includes viewing all properties one precinct at a time until all twelve precincts are completed. We would like to (as time, man-power and good weather allows) review three precincts a year in our agricultural areas and then continue this routine for future years.

This office will continue updating values in each market area following the market study on sales for the current study period.

We will update all ag properties each year as determined by building permits, information sheets and personal reporting to this office. We work closely with our Zoning Administrator in obtaining all information on construction within the county.

2008 Assessment Survey for Stanton County

Agricultural Appraisal Information

1.	Data collection done by:
	Staff
2.	Valuation done by:
	Staff
3.	Pickup work done by whom:
	The listers gather information and office does the pricing
4.	Does the county have a written policy or written standards to specifically define agricultural land versus rural residential acreages?
	No
a.	How is agricultural land defined in this county?
	As the main source of income derived from the property
5.	When was the last date that the Income Approach was used to estimate or establish the market value of the properties in this class?
	N/A
6.	What is the date of the soil survey currently used?
	1981, Conversion 8/23/95
7.	What date was the last countywide land use study completed?
	1981
a.	By what method? (Physical inspection, FSA maps, etc.)
	FSA Maps
<u>b.</u>	By whom?
	Office Staff
<u> </u>	What proportion is complete / implemented at this time?
	100%
8.	Number of market areas/neighborhoods in the agricultural property class:
	3

9.	How are market areas/neighborhoods defined in this property class?
	Location, market
10.	Has the county implemented (or is in the process of implementing) special
	valuation for agricultural land within the county?
	No

Agricultural Correlation

Agricultural Land

I. Correlation

AGRICULTURAL UNIMPROVED: The county found that the individual market areas were in need of some review. The county completed an analysis and concluded that each market area needed some adjustments. Therefore, the result is that the median level is within the acceptable level of value as well as the quality of assessment practices.

The tables indicate that the county utilized a reasonable percentage of sales. The Trended Preliminary Ratio is relatively close to the calculated overall median. The percentage point difference between the % Change to the Sales File and the % Change to the Assessed value base is reasonable. The median is on the lower edge of the acceptable range, the mean when rounded would also be on the lower edge of the acceptable range and the weighted mean is slightly below the range. The coefficient of dispersion and the price related differential are both well within the acceptable range. The analysis of the changes in statistics due to assessor action reflects the assessment actions implemented in the county for the 2008 assessment year.

Analysis of all six tables indicates that the county has achieved an acceptable level of value for the 2008 assessment year. Based on the assessment practices of Stanton County it is believed that the median level of value is the most reliable indicator of the level of value for the agricultural class.

II. Analysis of Percentage of Sales Used

This section documents the utilization of total sales compared to qualified sales in the sales file. Neb. Rev. Stat. §77-1327(2) (R. S. Supp., 2007) provides that all sales are deemed to be arm's length transactions unless determined to be otherwise under professionally accepted mass appraisal techniques. The county assessor is responsible for the qualification of the sales included in the residential sales file. The Division periodically reviews the procedures utilized by the county assessor to qualify/disqualify sales.

The Standard on Ratio Studies, International Association of Assessing Officials, (2007), indicates that low levels of sale utilization may indicate excessive trimming by the county assessor. Excessive trimming, the arbitrary exclusion or adjustment of arm's length transactions, may indicate an attempt to inappropriately exclude arm's length transactions to create the appearance of a higher level of value and quality of assessment. The sales file, in a case of excess trimming, will fail to properly represent the level of value and quality of assessment of the population of residential real property.

	Total Sales	Qualified Sales	Percent Used
2008	187	93	49.73
2007	146	67	45.89
2006	153	74	48.37
2005	143	63	44.06
2004	151	68	45.03
2003	146	80	54.79
2002	183	110	60.11
2001	171	105	61.4

AGRICULTURAL UNIMPROVED: The percentage of sales used gives a historical background that there have been sufficient sales utilized to establish a reliable background for the sales file.

III. Analysis of the Preliminary, Trended Preliminary and R&O Median Ratio

The trended preliminary ratio is an alternative method to calculate a point estimate as an indicator of the level of value. This table compares the preliminary median ratio, trended preliminary median ratio, and R&O median ratio, presenting four years of data to reveal any trends in assessment practices. The analysis that follows compares the changes in these ratios to the assessment actions taken by the county assessor. If the county assessor's assessment practices treat all properties in the sales file and properties in the population in a similar manner, the trended preliminary ratio will correlate closely with the R&O median ratio. The following is the justification for the trended preliminary ratio:

Adjusting for Selective Reappraisal

The reliability of sales ratio statistics depends on unsold parcels being appraised in the same manner as sold parcels. Selective reappraisal of sold parcels distorts sales ratio results, possibly rendering them useless. Equally important, selective reappraisal of sold parcels ("sales chasing") is a serious violation of basic appraisal uniformity and is highly unprofessional. Oversight agencies must be vigilant to detect the practice if it occurs and take necessary corrective action.

[To monitor sales chasing] A preferred approach is to use only sales that occur after appraised values are determined. However, as long as values from the most recent appraisal year are used in ratio studies, this is likely to be impractical. A second approach is to use values from the previous assessment year, so that most (or all) sales in the study follow the date values were set. In this approach, measures of central tendency must be adjusted to reflect changes in value between the previous and current year. For example, assume that the measure of central tendency is 0.924 and, after excluding parcels with changes in use or physical characteristics, that the overall change in value between the previous and current assessment years is 6.3 percent. The adjusted measure of central tendency is $0.924 \times 1.063 = 0.982$. This approach can be effective in determining the level of appraisal, but measures of uniformity will be unreliable if there has been any meaningful reappraisal activity for the current year.

Gloudemans, Robert J., Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), p. 315.

	Preliminary Median	% Change in Assessed Value (excl. growth)	Trended Preliminary Ratio	R&O Median
2008	65.34	4.55	68.31	69.21
2007	69.69	4.99	73.17	70.27
2006	66.06	12.21	74.13	74.72
2005	67.95	12.12	76.19	75.88
2004	61.52	24.74	76.74	76.24
2003	74	0.8	74.06	75
2002	71	4.74	74.37	77
2001	77	0.24	77.18	77

III. Analysis of the Preliminary, Trended Preliminary and R&O Median Ratio Continued

AGRICULTURAL UNIMPROVED: The Trended Preliminary Ratio is relatively close to the indicated R&O Median Ratio. There is not information available to suggest that the median ratio is not the best representation of the level of value.

IV. Analysis of Percentage Change in Total Assessed Value in the Sales File to Percentage Change in Assessed Value

This section analyzes the percentage change of the assessed values in the sales file, between the 2008 Preliminary Statistical Reports and the 2008 R&O Statistical Reports, to the percentage change in the assessed value of all real property base, by class, reported in the 2008 County Abstract of Assessment for Real Property, Form 45, excluding growth valuation, compared to the 2007 Certificate of Taxes Levied (CTL) Report. For purposes of calculating the percentage change in the sales file, only the sales in the most recent year of the study period are used. If assessment practices treat sold and unsold properties consistently, the percentage change in the sales file and assessed base will be similar. The analysis of this data assists in determining if the statistical representations calculated from the sales file are an accurate measure of the population. The following is justification for such an analysis:

Comparison of Average Value Changes

If sold and unsold properties are similarly appraised, they should experience similar changes in value over time. Accordingly, it is possible to compute the average change in value over a selected period for sold and unsold parcels and, if necessary, test to determine whether observed differences are significant. If, for example, values for vacant sold parcels in an area have increased by 45 percent since the previous reappraisal, but values for vacant unsold parcels have increased only 10 percent, sold and unsold parcels appear to have not been equally appraised. This apparent disparity between the treatment of sold and unsold properties provides an initial indication of poor assessment practices and should trigger further inquiry into the reasons for the disparity.

Gloudemans, Robert J., Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), p. 311.

IV. Analysis of Percentage Change in Total Assessed Value in the Sales File to Percentage
Change in Assessed Value Continued

% Change in Total Assessed Value in the Sale	s	% Change in Assessed Value (excl. growth)
6.16	2008	4.55
8.63	2007	4.99
14.18	2006	12.21
7.62	2005	12.12
28.16	2004	24.74
2	2003	1
7.84	2002	4.74
0	2001	0.24

AGRICULTURAL UNIMPROVED: The difference between the percent change to the sales file and the percent change to the assessed value base is relatively close and supports the assessment practices of the unsold and sold properties.

V. Analysis of the R&O Median, Wgt. Mean, and Mean Ratios

There are three measures of central tendency calculated by the Division: median ratio, weighted mean ratio, and mean ratio. Since each measure of central tendency has strengths and weaknesses, the use of any statistic for equalization should be reconciled with the other two, as in an appraisal, based on the appropriateness in the use of the statistic for a defined purpose, the quantity of the information from which it was drawn, and the reliability of the data that was used in its calculation. An examination of the three measures can serve to illustrate important trends in the data if the measures do not closely correlate to each other.

The IAAO considers the median ratio the most appropriate statistical measure for use in determining level of value for "direct" equalization; the process of adjusting the values of classes or subclasses of property in response to the determination of level of value at a point above or below a particular range. Since the median ratio is considered neutral in relationship to either assessed value or selling price, its use in adjusting the class or subclass of properties will not change the relationships between assessed value and level of value already present within the class or subclass of properties, thus rendering an adjustment neutral in its impact on the relative tax burden to an individual property. Additionally, the median ratio is less influenced by the presence of extreme ratios, commonly called outliers. One outlier in a small sample size of sales can have controlling influence over the other measures of central tendency. The median ratio limits the distortion potential of an outlier.

The weighted mean ratio is viewed by the IAAO as the most appropriate statistical measure for "indirect" equalization; to ensure proper funding distribution of aid to political subdivisions, particularly when the distribution in part is based on the assessable value in that political subdivision, Standard on Ratio Studies, International Association of Assessing Officers, (2007). The weighted mean, because it is a value weighted ratio, best reflects a comparison of the assessed and market value of property in the political subdivision. If the distribution of aid to political subdivision, the measurement of central tendency used to analyze level of value should reflect the dollars of value available to be assessed. The weighted mean ratio does that more than either of the other measures of central tendency.

If the weighted mean ratio, because of its dollar-weighting feature, is significantly different from the median ratio, it may be an indication of other problems with assessment proportionality. When this occurs, an evaluation of the county's assessment practices and procedures is appropriate to discover remedies to the situation.

The mean ratio is used as a basis for other statistical calculations, such as the price related differential and coefficient of variation. However, the mean ratio has limited application in the analysis of level of value because it assumes a normal distribution of the data set around the mean ratio with each ratio having the same impact on the calculation regardless of the assessed value or the selling price.

V. Analysis of the R&O Median, Wgt. Mean, and Mean Ratios Continued

	Median	Wgt. Mean	Mean
R&O Statistics	69.21	67.65	68.98

AGRICULTURAL UNIMPROVED: The median is the only measure of central tendency within the acceptable range. The mean when rounded would meet the range. However, the weighted mean is slightly below the acceptable range.

VI. Analysis of R&O COD and PRD

In analyzing the statistical data of assessment quality, there are two measures primarily relied upon by assessment officials. The Coefficient of Dispersion, COD, is produced to measure assessment uniformity. A low COD tends to indicate good assessment uniformity as there is a smaller "spread" or dispersion of the ratios in the sales file. A COD of less than 15 suggests that there is good assessment uniformity. Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), pp. 235-237. The IAAO has issued performance standards for major property groups:

Single-family residences: a COD of 15 percent or less.

For newer and fairly homogeneous areas: a COD of 10 or less. Income-producing property: a COD of 20 or less, or in larger urban jurisdictions, 15 or less. Vacant land and other unimproved property, such as agricultural land: a COD of 20 or less. Rural residential and seasonal properties: a COD of 20 or less.

Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), p. 246.

The Price Related Differential, PRD, is produced to measure assessment vertical uniformity (progressivity or regressivity). For example, assessments are considered regressive if high value properties are under-assessed relative to low value properties. A PRD of greater than 100 suggests that high value properties are relatively under-assessed. Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), pp. 239-240. A PRD of less than 100 indicates that high value properties are relatively over-assessed. As a general rule, except for small samples, a PRD should range between 98 and 103. This range is centered slightly above 100 to allow for a slightly upward measurement bias inherent in the PRD. Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), p. 247.

The analysis in this section indicates whether the COD and PRD meet the performance standards described above.

	COD	PRD
R&O Statistics	18.05	101.98
Difference	0	0

AGRICULTURAL UNIMPROVED: The coefficient of dispersion and the price related differential are both well within the acceptable range, giving support that the agricultural property class is valued uniformly and proportionate.

VII. Analysis of Change in Statistics Due to Assessor Actions

This section compares the statistical indicators from the Preliminary Statistical Reports to the same statistical indicators from the R&O Statistical Reports. The analysis that follows explains the changes in the statistical indicators in consideration of the assessment actions taken by the county assessor.

	Preliminary Statistics	R&O Statistics	Change
Number of Sales	94	93	-1
Median	65.34	69.21	3.87
Wgt. Mean	64.42	67.65	3.23
Mean	65.75	68.98	3.23
COD	18.66	18.05	-0.61
PRD	102.06	101.98	-0.08
Min Sales Ratio	25.27	25.54	0.27
Max Sales Ratio	103.82	110.03	6.21

AGRICULTURAL UNIMPROVED: Review of Table VII indicates that the county improved the quality of assessment. The county through the preliminary statistics found that the individual market areas needed to be reviewed. The county has improved the quality of statistics and the above table is reflective of the assessment actions for 2008.

2007 Plan of Assessment for Stanton County Assessment Years 2008, 2009 and 2010 June 15, 2007

Plan of Assessment Requirements:

Pursuant to Neb. Laws 2005, LB 263, section 9, on or before June 15 each year, the Assessor shall prepare a plan of assessment, (herein after referred to as the "plan"), which describes the assessment actions planned for the next assessment year and two years thereafter. The plan shall indicate the classes or subclasses of real property that the County Assessor plans to examine during the years contained in the plan of assessment. The plan shall describe all the assessment actions necessary to achieve the levels of value and quality of assessment practices required by law, and the resources necessary to complete those actions. On or before July 31 each year, the Assessor shall present the plan to the County Board of Equalization and the Assessor may amend the plan and any amendments thereto shall be mailed to the Department of Property Assessment and Taxation on or before October 31 each year.

Real Property Assessment Requirements:

All property in the State of Nebraska is subject to property tax unless expressly exempt by Nebraska Constitution, Article VIII, or is permitted by the constitution and enabling legislation adopted by the legislature. The uniform standard for the assessed value of real property for tax purposes is actual value, which is defined by law as "the market value of real property in the ordinary course of trade." Neb. Rev. Stat. 77-112 (Reissue 2003).

Assessment levels required for real property are as follows:

- 1) 100% of actual value for all classes of real property excluding agricultural and horticultural land
- 2) 75% of actual value for agricultural land and horticultural land: and
- 3) 75% of special value for agricultural and horticultural land which meets the qualifications for special valuation under 77-1344 and 75% of its recapture value as defined in 77-1343 when the land is disqualified for special valuation under 77-1347.

Reference: Neb. Rev. Stat. 77-201 (R. S. Supp 2006)

General Description of Real Property in Stanton County:

Per the 2007 County Abstract, Stanton County consists of the following real property types:

	Parcels	% of Total Parcels	% of Taxable Value Base
Residential	1,988	36.61 %	24.96 %
Commercial	175	3.22 %	1.29 %
Industrial	14	.257 %	3.15 %
Recreational	0	0.00 %	0.00 %
Agricultural	3,253	59.91 %	70.60 %
Special Value	0	0.00 %	0.00 %
***includes Game	and Parks		

Agricultural land consists of 259,840 taxable acres. 70% of Stanton County is agricultural and of that 60.2 % consists primarily of dryland, 11.81 % irrigated, 22.93 % grassland and 5.06 % wasteland.

New property: For assessment year 2007, an estimated 89 building permits and/or information statements were filed for new property construction/additions in the county.

For more information, see 2007 Reports & Opinions, Abstract and Assessor Survey.

Current Resources

A. Staff/Budget Training

- 1. The Assessors Office consists of three full time employees-County Assessor, Deputy Assessor and Office Clerk. The Assessor and Deputy have maintained Assessor Certificates since 1978.
- 2. The Assessors Office has a part time appraiser, Bill Kaiser, for commercial properties and a part time appraiser, Wayne Kubert, for industrial properties (Nucor Steel).
- 3. The Assessors Office has two part time employees for assistance with listing work each year. These employees assist with the measuring process and confirming the information needed to complete the pricing for Residential and Agricultural improvements.
- 4. The Assessor and Deputy continue with required educational classes each year to accumulate 60 credit hours each four year period in order to keep their certification updated and current.
- 5. The 2006/2007 budget for the Assessors Office was \$98,420. The appraisal portion of this budget was \$7,000. Due to limited full time staff and budget, the appraisal and reappraisal of property within Stanton County is a slow and ongoing process.

B. Cadastral Maps

The County Assessors office maintains a set of Cadastral maps pursuant to Reg. 10-004.03. The office staff keeps the maps updated by ownerships. The Cadastral maps are dated 1963. The County is in the process of implementing the AutoCad mapping computer program. At this time the City of Stanton, Village of Pilger and Woodland Park have been completed. It is the intention of the office to replace all Cadastral maps within the County. The mapping process is an extended and limited project due to funding and staff. The project is being completed within the office without any outside sources hired to do the updating.

C. Property Record Cards

The Assessors Office maintains Property Record Cards pursuant to Reg. 10-004. The property record cards contain all of the required information concerning ownership, legal description, classification codes, measurements, building inventory and valuation. The office staff maintains and updates the Property Record Cards.

D. Computer Software

Administrative software and Personal Property software used within the office is contracted with MIPS/County Solutions. The GIS software used is AutoCad. The Assessors Office is using CAMA computer pricing software for the re-evaluation of all improvements for Residential, Commercial and Agricultural properties. This is also an in-house project which will be completed over an extended period of time due to lack of staff and funding. At this time, the City of Stanton and Village of Pilger residential properties have been revalued with updated photos and computer drawings, and rural residential have been revalued, along with completion of computer sketches.

E. Stanton County does not have a Web based site for property record information access at this time.

Current Assessment Procedures for Real Property

A. Pick Up Work

Pursuant to Reg. 50-001.06, pick up work or new construction is an ongoing process within the County. New construction is located with permits and information sheets completed by property owners. Some improvements are found from drive by reviews. Pick up work on new construction or alterations/updates are started the mid-month of September with completed work deadlines set for March 1.

B. Sales Review

Pursuant to Reg. 12-003, the Real Estate Transfer Statements (521's) are completed and filed with the Department of Property Assessment and Taxation on a monthly basis. Upon receipt of the 521, the Deputy Assessor completes the supplemental information forms.

The Assessor and Deputy determine if the sale is an arm's length transaction and qualify it for use in the sales file. The county completes a review of the sales for the residential class only. The County had previously relied on the Dept. of Property Assessment and Taxation reviewer to complete the review on the commercial and agricultural classes of property. This process has been eliminated and this office must rely on different methods to review these properties. Since Stanton County is a small county and familiar to the Assessor and Deputy, some information is readily available for certain properties. Some assistance has been provided from the Commissioners and also the taxpayers. Due to limited staff and funds, to hire a reviewer is not feasible, and limited time due to other office duties, in house reviewers are not possible at this time. The Assessor would like to develop some type of review plan, but at this time one is not in place. The office has sales file books with the 521 copies and information attachments available for the public to view. We also have a sales file map of agricultural sales by precinct available. In regard to qualifying a sale, the county considers the 12 "no" reasons listed in Statute 77-1371, one of it's tools in deciding if a sale can be used. The county defines actual or market value for the Sale's Review process as the most probable price between willing buyer and seller on an open market. Documentation will be made concerning changing market influences in the County. Adjustments may be made to the sale if Personal Property is found to be part of the sale price.

C. Real Estate

The Assessors office purchased the CAMA computer pricing software and began the process of repricing all improvements for residential, commercial and agricultural properties. The CAMA program allows this office to update the sketches for all properties. The sketches are being implemented into the program along with the pricing. The process of updating photos and a visual review of each property was also started. Information questionnaires are mailed for completion to each property owner as the review process progresses throughout the County.

1. Residential

The Assessor did a visual inspection review of residential properties in the Village of Pilger and the City of Stanton. New photos of each property were taken and added to the property record card. Questionnaires mailed earlier to each owner were utilized for completion of more detailed/updated information. The lots were re-valued, changing to the square foot method. At this time, updated pricing with the new photos for the City of Stanton and the Village of Pilger are being used. The Rural Residentials have also had updated pricing and photos. Questionnaires were mailed to property owners of Woodland Park and the review process has started for this Suburban development in Stanton County.

- 2. Agricultural
 - a. The County developed market areas in 2000 due to sales of agricultural land. Land use was verified in 1981. Land use had always been an ongoing analysis. The Assessor obtains land use maps from the FSA to review with the property record cards.
 - b. The last county wide physical reappraisal was conducted in 1981. A visual inspection, review of agricultural improvements and updated

computer pricing, along with new photos is planned. This lengthy process is planned within a six year mandated period of time.

c. The County developed a third market area in 2006 due to sales of agricultural land.

The revaluing with updated computer pricing and review process has been an ongoing project for Stanton County. This is an in house project with limited time, staff and budget. Each year market studies are performed for each type of property-residential, commercial and agricultural. With the help of our State Liaison we use the market and sales ratio studies to assist us in determining the market value of Stanton County properties. Once the market and sales ratio studies have been completed, the valuations of each type of property are set. After the values are set, the Abstract of Assessment certified, the Assessor then certifies the completion of the assessment roll to the County Clerk. The Assessor runs a Public Notice in the local newspaper of the certification. A Notice of Valuation Change is mailed to each property owner with an increase or decrease in value. The Assessor mails assessment/sales ratio statistics (as determined by TERC) to media and also will display the statistics in the Assessor's office.

Property Class	Median	COD**	PRD***
Residential	94	16.78	102.47
Commercial*	NA	NA	NA
Agricultural Land	70	16.21	101.03

Level of Value, Quality and Uniformity for Assessment Year 2007:

*Commercial sales are insufficient to provide reliable statistical studies. **COD means coefficient of dispersion and ***PRD means price related differential.

For more information regarding statistical measures, see 2007 Reports & Opinions.

Assessment Actions Planned for Assessment Year 2008:

Residential

Complete visual review of remaining Woodland Park properties, reprice remaining lots there by the square footage method and implement current computer pricing. Send out questionnaires to the remaining suburban properties for updating information and continue review process on those. Will review and update 158 mobile homes in the County and take pictures for our records. We will pick up new improvements/additions for the year and conduct our yearly market and sales ratio study of all residential properties.

Agricultural

Pick up new improvements or additions and conduct market and sales ratio study of all agricultural property.

Commercial

Begin review of 179 commercial properties, as this hasn't been done for quite some time. Pick up new improvements or additions and conduct market and sales ratio study of all commercial properties.

Assessment Actions Planned for Assessment Year 2009:

Residential

Complete any remaining residential property updates with the valuation done by CAMA software. Pick up new improvements and additions and conduct market and sales ratio study of the residential property.

Agricultural

Begin the review process of agricultural properties and price them with the CAMA program. Pick up new improvements and additions and conduct market and sales ratio study on all agricultural properties.

Commercial

Complete review and new value process for remaining commercial properties. Pick up new improvements and additions and conduct market and sales ratio study of all commercial property.

Assessment Actions Planned for Assessment Year 2010

Residential

Pick up new improvements or additions and conduct market and sales ratio study of all residential properties.

Agricultural

Continue the review process of agricultural properties and value with the CAMA program. Pick up new improvements and additions and conduct market and sales ratio study for all agricultural properties.

Commercial

Pick up new improvements and additions and conduct market and sales ratio study on all commercial properties.

Other functions performed by the Assessor's Office, but not limited to:

- 1. Record maintenance, mapping updates and ownership changes
- 2. Annually prepare and file Assessor Administrative Reports required by law/regulations:
 - a. Abstracts (Real Estate and Personal Property)
 - b. Assessor Survey
 - c. Sales information to P A & T rosters and annual Assessed value update w/abstract
 - d. Certification of Value to Political Subdivisions
 - e. School District Taxable value report
 - f. Homestead Exemption Tax Loss Report (in conjunction with Treasurer)
 - g. Certificate of Taxes Levied Report
 - h. Report of current values for properties owned by Board of Educational Lands and Funds
 - i. Report of all Exempt Property and Taxable Government owned property
 - j. Annual Plan of Assessment Report
- 3. Personal Property- administer annual filing of 811 schedules, prepare subsequent notices for incomplete filings or failure to file and penalties applied, as required.
- 4. Permissive Exemptions- administer annual filings of applications for new or continued exempt use, review and make recommendations to county board.
- 5. Taxable Government Owned Property-annual review of government owned property not used for public purpose, send notices of intent to tax and value.

- 6. Homestead Exemptions- administer 205 annual filings of applications, approval/denial process, taxpayer notifications, and taxpayer assistance.
- 7. Centrally Assessed-review of valuations as certified by P A & T for railroads and public service entities, establish assessment records and tax billing for tax list.
- 8. Tax districts and Tax Rates-management of school district and other tax entity boundary changes necessary for correct assessment and tax information: input/review of tax rates used for tax billing process.
- 9. Tax Lists- prepare and certify tax lists to County Treasurer for real property, personal property, and centrally assessed.
- 10. Tax List Corrections-prepare tax list correction documents for County Board of Equalization approval.
- 11. County Board of Equalization-attend County Board of Equalization meetings for meetings for valuation protests-assemble and provide information.
- 12. TERC Appeals-prepare information and attend taxpayer appeal hearings for TERC, to defend county valuation.
- 13. TERC Statewide Equalization-attend hearings if applicable to county, defend values and/or implement orders of the TERC.
- 14. Education- Assessor and/or Appraisal Education; attend meetings, workshops, and educational classes to obtain required hours of continuing education to maintain Assessor certification and/or appraiser license. Minimum of 60 credit hours per 4 years.

In order for the Assessor to do a complete and thorough job of locating and fairly and equitable valuing property for tax purposes, it takes time, staff and budget. The Stanton County Assessor has always had and continues to have a good working relationship with the Stanton County Board of Commissioners. They have always given support to this office. Due to ongoing tight budget restraints, it is hard for this office to hire additional employees to help with the updating and revaluing of real property in Stanton County. Although Stanton County is not a large county compared to some others, we have only three full time staff members and it is a large workload for three people to try and revalue the entire county and still complete regular full time duties within the office.

Respectfully submitted:

Stanton County Assessor

2008 Assessment Survey for Stanton County

I. General Information

A. Staffing and Funding Information

1.	Deputy(ies) on staff
	1
2.	Appraiser(s) on staff
	1 (Part time, commercial and industrial)
3.	Other full-time employees
	1
4.	Other part-time employees
	2
5.	Number of shared employees
	0
6.	Assessor's requested budget for current fiscal year
	\$101,720
7.	Part of the budget that is dedicated to the computer system
	\$650.00
8.	Adopted budget, or granted budget if different from above
9.	Amount of the total budget set aside for appraisal work
	\$7,000
10.	Amount of the total budget set aside for education/workshops
	\$1,000
11.	Appraisal/Reappraisal budget, if not part of the total budget
	\$0
12.	Other miscellaneous funds

13.	Total budget
	\$101,720
a.	Was any of last year's budget not used:
a.	Was any of last year's budget not used: \$5,302.81

B. Computer, Automation Information and GIS

1.	Administrative software
	MIPS
2.	CAMA software
	MIPS
3.	Cadastral maps: Are they currently being used?
	Yes
4.	Who maintains the Cadastral Maps?
	Office Staff
5.	Does the county have GIS software?
	No
6.	Who maintains the GIS software and maps?
	N/A
7.	Personal Property software:
	MIPS

C. Zoning Information

1.	Does the county have zoning?
	Yes
2.	If so, is the zoning countywide?
	Yes
3.	What municipalities in the county are zoned?
	Pilger and Stanton

4.	When was zoning implemented?
	1998

D. Contracted Services

1.	Appraisal Services
	Contracted for commercial with Bill Kaiser and Wayne Kubert
2.	Other services
	N/A

Certification

Certification

This is to certify that the 2008 Reports and Opinions of the Property Tax Administrator have been sent to the following:

•Five copies to the Tax Equalization and Review Commission, by hand delivery.

•One copy to the Stanton County Assessor, by certified mail, return receipt requested, 7006 2760 0000 6387 5135.

Dated this 7th day of April, 2008.

Cyndy Thompson
