2009 Opinions of the Property Tax Administrator for Johnson County

My opinions and recommendations are stated as a conclusion based on all of the factors known to me regarding the assessment practices and statistical analysis for this county. See, Neb. Rev. Stat. §77-5027 (R. S. Supp., 2005). While the median assessment sales ratio from the Qualified Statistical Reports for each class of real property is considered, my opinion of the level of value for a class of real property may be determined from other evidence contained within this Reports and Opinions of the Property Tax Administrator. The resource used regarding the quality of assessment for each class of real property in this county are the performance standards issued by the International Association of Assessing Officers (IAAO). My opinion of quality of assessment for a class of real property may be influenced by the assessment practices of the county assessor.

Residential Real Property

It is my opinion that the level of value of the class of residential real property in Johnson County is 97.00% of actual value. It is my opinion that the quality of assessment for the class of residential real property in Johnson County is in compliance with generally accepted mass appraisal practices.

Commercial Real Property

It is my opinion that the level of value of the class of commercial real property in Johnson County is 95.00% of actual value. It is my opinion that the quality of assessment for the class of commercial real property in Johnson County is in compliance with generally accepted mass appraisal practices.

Agricultural Land or Special Valuation of Agricultural Land

It is my opinion that the level of value of the class of agricultural or special value land in Johnson County is 71.00% of actual value. It is my opinion that the quality of assessment for the class of agricultural land in Johnson County is in compliance with generally accepted mass appraisal practices.

Dated this 7th day of April, 2009.

Johnson County 2009 Assessment Actions taken to address the following property classes/subclasses:

Residential: Johnson County reviewed Area 1 urban and rural parcels which included the assessor locations of Sterling and Cook. The review consisted of updating cost tables for a new RCN, new depreciation, and new photos as well as reviewing the listing for the property. During the review the additions or deletions of improvements were noted on the property record card. The County also adjusted the Eastridge Addition neighborhood in Tecumseh where the county reduced the economic depreciation. The statistics were reviewed for possible adjustments to all residential parcels. The County also completed their permit and pick-up work for the year.

2009 Assessment Survey for Johnson County

Residential Appraisal Information
(Includes Urban, Suburban and Rural Residential)

| 1. | Data collection done by: | | | | | | |
|-----|---|--|--|--|--|--|--|
| | Lister/Appraiser/Assessor | | | | | | |
| 2. | Valuation done by: | | | | | | |
| | Assessor/Appraiser | | | | | | |
| 3. | Pickup work done by whom: | | | | | | |
| | Assessor/Appraiser | | | | | | |
| 4. | What is the date of the Replacement Cost New data (Marshall-Swift) that are | | | | | | |
| | used to value this property class? | | | | | | |
| | June 2008- Area 1 | | | | | | |
| | June 2004- Areas,2, and 3 | | | | | | |
| | June 2004- Tecumseh | | | | | | |
| 5. | What was the last year a depreciation schedule for this property class was | | | | | | |
| | developed using market-derived information? | | | | | | |
| | 2008- Area 1 | | | | | | |
| | 2004- Areas 2 and 3 | | | | | | |
| | 2007- Tecumseh | | | | | | |
| 6. | What approach to value is used in this class or subclasses to estimate the | | | | | | |
| | market value of properties? | | | | | | |
| | Replacement Cost new less Depreciation | | | | | | |
| 7. | Number of Market Areas/Neighborhoods/Assessor Locations? | | | | | | |
| | Urban- 4 | | | | | | |
| | Suburban- 3 | | | | | | |
| | Rural- 3 | | | | | | |
| | Res. Ag- 3 | | | | | | |
| 8. | How are these Market Areas/Neighborhoods/Assessor Locations defined? | | | | | | |
| | Areas/ neighborhoods are defined by the township: Area 1 is Township 6; Area 2 is | | | | | | |
| | Township 5; Area 3 is Township 4. The towns of Sterling, Cook, and Tecumseh are | | | | | | |
| | looked at as three different market areas. The towns of Elk Creek and Crab Orchard | | | | | | |
| | are individually analyzed due to lack of recent sales activity, but the sales that do | | | | | | |
| 0 | occur are considered as comparables for both towns | | | | | | |
| 9. | Is "Market Area/Neighborhoods/Assessor Locations" a unique usable valuation grouping? If not, what is a unique usable valuation grouping? | | | | | | |
| | | | | | | | |
| 10 | Yes Is there unique more to configure of the suburban leastion as defined in Page | | | | | | |
| 10. | Is there unique market significance of the suburban location as defined in Reg. | | | | | | |
| | 10-001.07B? (Suburban shall mean a parcel of real estate property located outside | | | | | | |
| | of the limits of an incorporated city or village, but within the legal jurisdiction of an incorporated city or village.) | | | | | | |
| | incorporated city or vittage.) | | | | | | |

| | Suburban as defined by Reg. is just for classification purposes. | | | | | | |
|-----|--|--|--|--|--|--|--|
| 11. | Are dwellings on agricultural parcels and dwellings on rural residential parcels | | | | | | |
| | valued in a manner that would provide the same relationship to the market? | | | | | | |
| | Explain? | | | | | | |
| | Yes, both classes are appraised at the same time and by the same method. | | | | | | |

Residential Real Property

I. Correlation

RESIDENTIAL:Analysis of the following tables demonstrates that the statistics support a level of value within the acceptable range. Both the coefficient of dispersion and the price related differential are outside the acceptable range. Both quality statistics improved slightly since the preliminary statistics but they do not support assessment uniformity or proportionality. The R&O statistics along with each of these analyses demonstrates that the county has achieved an acceptable level of value and that the median is a reliable measure of value in this class of property.

II. Analysis of Percentage of Sales Used

This section documents the utilization of total sales compared to qualified sales in the sales file. Neb. Rev. Stat. 77-1327(2) (R. S. Supp., 2007) provides that all sales are deemed to be arm's length transactions unless determined to be otherwise under professionally accepted mass appraisal techniques. The county assessor is responsible for the qualification of the sales included in the residential sales file. The Division periodically reviews the procedures utilized by the county assessor to qualify/disqualify sales.

The Standard on Ratio Studies, International Association of Assessing Officials, (2007), indicates that low levels of sale utilization may indicate excessive trimming by the county assessor. Excessive trimming, the arbitrary exclusion or adjustment of arm's length transactions, may indicate an attempt to inappropriately exclude arm's length transactions to create the appearance of a higher level of value and quality of assessment. The sales file, in a case of excess trimming, will fail to properly represent the level of value and quality of assessment of the population of residential real property.

| | Total Sales | Qualified Sales | Percent Used |
|------|--------------------|------------------------|---------------------|
| 2009 | 170 | 75 | 44.12 |
| 2008 | 194 | 120 | 61.86 |
| 2007 | 204 | 134 | 65.69 |
| 2006 | 192 | 149 | 77.60 |
| 2005 | 179 | 156 | 87.15 |

RESIDENTIAL:In review of the above table it is noted that the county has used fewer sales as compared to recent history. In review of the county assessment practices there is nothing to suggest excessive trimming but rather that the county has utilized all available arms length transactions.

III. Analysis of the Preliminary, Trended Preliminary and R&O Median Ratio

The trended preliminary ratio is an alternative method to calculate a point estimate as an indicator of the level of value. This table compares the preliminary median ratio, trended preliminary median ratio, and R&O median ratio, presenting four years of data to reveal any trends in assessment practices. The analysis that follows compares the changes in these ratios to the assessment actions taken by the county assessor. If the county assessor's assessment practices treat all properties in the sales file and properties in the population in a similar manner, the trended preliminary ratio will correlate closely with the R&O median ratio. The following is the justification for the trended preliminary ratio:

Adjusting for Selective Reappraisal

The reliability of sales ratio statistics depends on unsold parcels being appraised in the same manner as sold parcels. Selective reappraisal of sold parcels distorts sales ratio results, possibly rendering them useless. Equally important, selective reappraisal of sold parcels (sales chasing) is a serious violation of basic appraisal uniformity and is highly unprofessional. Oversight agencies must be vigilant to detect the practice if it occurs and take necessary corrective action.

[To monitor sales chasing] A preferred approach is to use only sales that occur after appraised values are determined. However, as long as values from the most recent appraisal year are used in ratio studies, this is likely to be impractical. A second approach is to use values from the previous assessment year, so that most (or all) sales in the study follow the date values were set. In this approach, measures of central tendency must be adjusted to reflect changes in value between the previous and current year. For example, assume that the measure of central tendency is 0.924 and, after excluding parcels with changes in use or physical characteristics, that the overall change in value between the previous and current assessment years is 6.3 percent. The adjusted measure of central tendency is $0.924 \times 1.063 = 0.982$. This approach can be effective in determining the level of appraisal, but measures of uniformity will be unreliable if there has been any meaningful reappraisal activity for the current year.

Gloudemans, Robert J., Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), p. 315.

III. Analysis of the Preliminary, Trended Preliminary and R&O Median Ratio Continued

| | Preliminary Median | % Change in Assessed Value (excl. growth) | Trended Preliminary Ratio | R&O Median |
|------|-----------------------|---|------------------------------|---------------|
| 2009 | 95 | 1.77 | 97 | 97 |
| 2008 | 97.53 | -0.29 | 97 | 97.26 |
| 2007 | 98 | -0.55 | 97 | 98 |
| 2006 | 98 | -0.26 | 97 | 98 |
| 2005 | 96 | 5.31 | 101 | 98 |

RESIDENTIAL:After review of the trended preliminary ratio and the R&O median, it is apparent that the two statistics are similar and show strong support for a level of value within the acceptable range.

IV. Analysis of Percentage Change in Total Assessed Value in the Sales File to Percentage Change in Assessed Value

This section analyzes the percentage change of the assessed values in the sales file, between the 2009 Preliminary Statistical Reports and the 2009 R&O Statistical Reports, to the percentage change in the assessed value of all real property base, by class, reported in the 2008 County Abstract of Assessment for Real Property, Form 45, excluding growth valuation, compared to the 2008 Certificate of Taxes Levied (CTL) Report. For purposes of calculating the percentage change in the sales file, only the sales in the most recent year of the study period are used. If assessment practices treat sold and unsold properties consistently, the percentage change in the sales file and assessed base will be similar. The analysis of this data assists in determining if the statistical representations calculated from the sales file are an accurate measure of the population. The following is justification for such an analysis:

Comparison of Average Value Changes

If sold and unsold properties are similarly appraised, they should experience similar changes in value over time. Accordingly, it is possible to compute the average change in value over a selected period for sold and unsold parcels and, if necessary, test to determine whether observed differences are significant. If, for example, values for vacant sold parcels in an area have increased by 45 percent since the previous reappraisal, but values for vacant unsold parcels have increased only 10 percent, sold and unsold parcels appear to have not been equally appraised. This apparent disparity between the treatment of sold and unsold properties provides an initial indication of poor assessment practices and should trigger further inquiry into the reasons for the disparity.

IV. Analysis of Percentage Change in Total Assessed Value in the Sales File to Percentage Change in Assessed Value Continued

% Change in Total Assessed Value in the Sales File % Change in Total Assessed Value (excl. growth)

| 2.11 | 2009 | 1.77 |
|-------|------|-------|
| 1.36 | 2008 | -0.29 |
| -0.58 | 2007 | -0.55 |
| 1.11 | 2006 | -0.26 |
| 6.27 | 2005 | 5.31 |

RESIDENTIAL:After review of the percent change report, it appears that the county has appraised sold parcels similarly to unsold parcels. The percent change in sales base value and the percent change in assessed base value is consistent with the reported assessment actions. As shown in the table this has been a historical pattern in the residential class in the county.

V. Analysis of the R&O Median, Wgt. Mean, and Mean Ratios

There are three measures of central tendency calculated by the Division: median ratio, weighted mean ratio, and mean ratio. Since each measure of central tendency has strengths and weaknesses, the use of any statistic for equalization should be reconciled with the other two, as in an appraisal, based on the appropriateness in the use of the statistic for a defined purpose, the quantity of the information from which it was drawn, and the reliability of the data that was used in its calculation. An examination of the three measures can serve to illustrate important trends in the data if the measures do not closely correlate to each other.

The IAAO considers the median ratio the most appropriate statistical measure for use in determining level of value for direct equalization; the process of adjusting the values of classes or subclasses of property in response to the determination of level of value at a point above or below a particular range. Since the median ratio is considered neutral in relationship to either assessed value or selling price, its use in adjusting the class or subclass of properties will not change the relationships between assessed value and level of value already present within the class or subclass of properties, thus rendering an adjustment neutral in its impact on the relative tax burden to an individual property. Additionally, the median ratio is less influenced by the presence of extreme ratios, commonly called outliers. One outlier in a small sample size of sales can have controlling influence over the other measures of central tendency. The median ratio limits the distortion potential of an outlier.

The weighted mean ratio is viewed by the IAAO as the most appropriate statistical measure for indirect equalization; to ensure proper funding distribution of aid to political subdivisions, particularly when the distribution in part is based on the assessable value in that political subdivision, Standard on Ratio Studies, International Association of Assessing Officers, (2007). The weighted mean, because it is a value weighted ratio, best reflects a comparison of the assessed and market value of property in the political subdivision. If the distribution of aid to political subdivisions must relate to the market value available for assessment in the political subdivision, the measurement of central tendency used to analyze level of value should reflect the dollars of value available to be assessed. The weighted mean ratio does that more than either of the other measures of central tendency.

If the weighted mean ratio, because of its dollar-weighting feature, is significantly different from the median ratio, it may be an indication of other problems with assessment proportionality. When this occurs, an evaluation of the county's assessment practices and procedures is appropriate to discover remedies to the situation.

The mean ratio is used as a basis for other statistical calculations, such as the price related differential and coefficient of variation. However, the mean ratio has limited application in the analysis of level of value because it assumes a normal distribution of the data set around the mean ratio with each ratio having the same impact on the calculation regardless of the assessed value or the selling price.

V. Analysis of the R&O Median, Wgt. Mean, and Mean Ratios Continued

| | Median | Wgt. Mean | Mean |
|----------------|--------|-----------|------|
| R&O Statistics | 97 | 97 | 106 |

RESIDENTIAL: The median and weighted mean are within the acceptable range. The mean is above the acceptable range by 6 points.

VI. Analysis of R&O COD and PRD

In analyzing the statistical data of assessment quality, there are two measures primarily relied upon by assessment officials. The Coefficient of Dispersion, COD, is produced to measure assessment uniformity. A low COD tends to indicate good assessment uniformity as there is a smaller spread or dispersion of the ratios in the sales file. A COD of less than 15 suggests that there is good assessment uniformity. Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), pp. 235-237. The IAAO has issued performance standards for major property groups:

Single-family residences: a COD of 15 percent or less.

For newer and fairly homogeneous areas: a COD of 10 or less.

Income-producing property: a COD of 20 or less, or in larger urban jurisdictions, 15 or less.

Vacant land and other unimproved property, such as agricultural land: a COD of 20 or less.

Rural residential and seasonal properties: a COD of 20 or less.

Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), p. 246.

The Price Related Differential, PRD, is produced to measure assessment vertical uniformity (progressivity or regressivity). For example, assessments are considered regressive if high value properties are under-assessed relative to low value properties. A PRD of greater than 100 suggests that high value properties are relatively under-assessed. Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), pp. 239-240. A PRD of less than 100 indicates that high value properties are relatively over-assessed. As a general rule, except for small samples, a PRD should range between 98 and 103. This range is centered slightly above 100 to allow for a slightly upward measurement bias inherent in the PRD. Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), p. 247.

The analysis in this section indicates whether the COD and PRD meet the performance standards described above.

| | COD | PRD |
|----------------|-------|--------|
| R&O Statistics | 19.40 | 109.04 |
| Difference | 4.40 | 6.04 |

RESIDENTIAL: The coefficient of dispersion and price related differential are both outside the acceptable range. These quality statistics do not support assessment uniformity.

VII. Analysis of Change in Statistics Due to Assessor Actions

This section compares the statistical indicators from the Preliminary Statistical Reports to the same statistical indicators from the R&O Statistical Reports. The analysis that follows explains the changes in the statistical indicators in consideration of the assessment actions taken by the county assessor.

| | Preliminary Statistics | R&O Statistics | Change |
|-----------------|-------------------------------|---------------------------|--------|
| Number of Sales | 78 | 75 | -3 |
| Median | 95 | 97 | 2 |
| Wgt. Mean | 95 | 97 | 2 |
| Mean | 107 | 106 | -1 |
| COD | 24.74 | 19.40 | -5.34 |
| PRD | 112.48 | 109.04 | -3.44 |
| Minimum | 58.60 | 55.62 | -2.98 |
| Maximum | 386.47 | 386.47 | 0.00 |

RESIDENTIAL: The change between the preliminary statistics and the Reports and Opinion statistics is consistent with the assessment actions reported by the County for this class of property. The difference in the number of qualified sales is a result of sales sustaining substantial physical changes and being removed from the qualified sales roster.

VIII. Trended Ratio Analysis

In order to be meaningful, statistical inferences must be based on a representative and proportionate sample of the population. If the sales are representative of the population and the sales have been appraised in a similar manner to the unsold properties, statistical inferences should be substantially the same as statistics developed from actual assessed value. This comparison is to provide additional information to the analyst in determining the reliability of the statistical inference.

| | R&O Statistics | Trended Ratio | Difference |
|-----------------|---------------------------|----------------------|------------|
| Number of Sales | 75 | 75 | 0 |
| Median | 97 | 95 | 2 |
| Wgt. Mean | 97 | 94 | 3 |
| Mean | 106 | 107 | -1 |
| COD | 19.40 | 31.14 | -11.74 |
| PRD | 109.04 | 113.48 | -4.44 |
| Minimum | 55.62 | 13.69 | 41.93 |
| Maximum | 386.47 | 405.36 | -18.89 |

The table above is a direct comparison of the statistics generated using the 2009 assessed values reported by the assessor to the statistics generated using the assessed value for the year prior to the sale factored by the annual movement in the population.

In Johnson County the measures of central tendency are very similar suggesting the sales file is representative of the population.

Johnson County 2009 Assessment Actions taken to address the following property classes/subclasses:

Commercial: Johnson County reviewed the statistical analysis and completed permit and pickup work for the class.

2009 Assessment Survey for Johnson County

Commercial/Industrial Appraisal Information

| 1. | Data collection done by: |
|-----|---|
| | Appraiser |
| 2. | Valuation done by: |
| | Appraiser with Assessor review |
| 3. | Pickup work done by whom: |
| | Appraiser |
| 4. | What is the date of the Replacement Cost New data (Marshall-Swift) that are |
| | used to value this property class? |
| | June 2007 |
| 5. | What was the last year a depreciation schedule for this property class was |
| | developed using market-derived information? |
| | 2007 |
| 6. | When was the last time that the Income Approach was used to estimate or |
| | establish the market value of the properties in this class? |
| | 2007 |
| 7. | What approach to value is used in this class or subclasses to estimate the |
| | market value of properties? |
| | RCN Less depreciation |
| 8. | Number of Market Areas/Neighborhoods/Assessor Locations? |
| | 5 |
| 9. | How are these Market Areas/Neighborhoods/Assessor Locations defined? |
| | By town. |
| 10. | Is "Market Area/Neighborhood/Assessor Location" a unique usable valuation |
| | grouping? If not, what is a unique usable valuation grouping? |
| | Yes |
| 11. | Do the various subclasses of Commercial Property such as convenience stores, |
| | warehouses, hotels, etc. have common value characteristics? |
| | No, there is not enough market activity to establish a common value for subclasses. |
| 12. | Is there unique market significance of the suburban location as defined in Reg. |
| | 10-001.07B? (Suburban shall mean a parcel of real property located outside of the |
| | limits of an incorporated city or village, but within the legal jurisdiction of an |
| | incorporated city or village.) |
| | There is no market significance. |

Commerical Real Property

I. Correlation

COMMERCIAL:Analysis of the following tables demonstrates that the statistics support a level of value within the acceptable range that is best measured by the median measure of central tendency. The analysis using the limited number of sales in the county would cause one to question a pure statistical approach. Knowing the ongoing efforts of the county and the consistent practices of the office I feel the median is most representative of the overall level of value.

II. Analysis of Percentage of Sales Used

This section documents the utilization of total sales compared to qualified sales in the sales file. Neb. Rev. Stat. 77-1327(2) (R. S. Supp., 2007) provides that all sales are deemed to be arm's length transactions unless determined to be otherwise under professionally accepted mass appraisal techniques. The county assessor is responsible for the qualification of the sales included in the residential sales file. The Division periodically reviews the procedures utilized by the county assessor to qualify/disqualify sales.

The Standard on Ratio Studies, International Association of Assessing Officials, (2007), indicates that low levels of sale utilization may indicate excessive trimming by the county assessor. Excessive trimming, the arbitrary exclusion or adjustment of arm's length transactions, may indicate an attempt to inappropriately exclude arm's length transactions to create the appearance of a higher level of value and quality of assessment. The sales file, in a case of excess trimming, will fail to properly represent the level of value and quality of assessment of the population of residential real property.

| | Total Sales | Qualified Sales | Percent Used |
|------|--------------------|------------------------|---------------------|
| 2009 | 35 | 12 | 34.29 |
| 2008 | 33 | 12 | 36.36 |
| 2007 | 38 | 18 | 47.37 |
| 2006 | 36 | 18 | 50.00 |
| 2005 | 46 | 24 | 52.17 |

COMMERCIAL: This table indicates that the County has utilized an acceptable portion of the available sales and that the measurement of the class of property was done with all available arms length sales.

III. Analysis of the Preliminary, Trended Preliminary and R&O Median Ratio

The trended preliminary ratio is an alternative method to calculate a point estimate as an indicator of the level of value. This table compares the preliminary median ratio, trended preliminary median ratio, and R&O median ratio, presenting four years of data to reveal any trends in assessment practices. The analysis that follows compares the changes in these ratios to the assessment actions taken by the county assessor. If the county assessor's assessment practices treat all properties in the sales file and properties in the population in a similar manner, the trended preliminary ratio will correlate closely with the R&O median ratio. The following is the justification for the trended preliminary ratio:

Adjusting for Selective Reappraisal

The reliability of sales ratio statistics depends on unsold parcels being appraised in the same manner as sold parcels. Selective reappraisal of sold parcels distorts sales ratio results, possibly rendering them useless. Equally important, selective reappraisal of sold parcels (sales chasing) is a serious violation of basic appraisal uniformity and is highly unprofessional. Oversight agencies must be vigilant to detect the practice if it occurs and take necessary corrective action.

[To monitor sales chasing] A preferred approach is to use only sales that occur after appraised values are determined. However, as long as values from the most recent appraisal year are used in ratio studies, this is likely to be impractical. A second approach is to use values from the previous assessment year, so that most (or all) sales in the study follow the date values were set. In this approach, measures of central tendency must be adjusted to reflect changes in value between the previous and current year. For example, assume that the measure of central tendency is 0.924 and, after excluding parcels with changes in use or physical characteristics, that the overall change in value between the previous and current assessment years is 6.3 percent. The adjusted measure of central tendency is $0.924 \times 1.063 = 0.982$. This approach can be effective in determining the level of appraisal, but measures of uniformity will be unreliable if there has been any meaningful reappraisal activity for the current year.

Gloudemans, Robert J., Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), p. 315.

III. Analysis of the Preliminary, Trended Preliminary and R&O Median Ratio Continued

| | Preliminary Median | % Change in Assessed Value (excl. growth) | Trended Preliminary Ratio | R&O Median |
|------|-----------------------|---|------------------------------|---------------|
| 2009 | 97 | -0.45 | 97 | 95 |
| 2008 | 96.25 | 2.92 | 99 | 98.98 |
| 2007 | 93 | -0.56 | 93 | 94 |
| 2006 | 100 | 2.42 | 102 | 99 |
| 2005 | 100 | 1.97 | 102 | 100 |

COMMERCIAL:After review of the trended preliminary ratio and the R&O median, it is apparent that the two statistics are similar and show strong support for a level of value within the acceptable range.

IV. Analysis of Percentage Change in Total Assessed Value in the Sales File to Percentage Change in Assessed Value

This section analyzes the percentage change of the assessed values in the sales file, between the 2009 Preliminary Statistical Reports and the 2009 R&O Statistical Reports, to the percentage change in the assessed value of all real property base, by class, reported in the 2008 County Abstract of Assessment for Real Property, Form 45, excluding growth valuation, compared to the 2008 Certificate of Taxes Levied (CTL) Report. For purposes of calculating the percentage change in the sales file, only the sales in the most recent year of the study period are used. If assessment practices treat sold and unsold properties consistently, the percentage change in the sales file and assessed base will be similar. The analysis of this data assists in determining if the statistical representations calculated from the sales file are an accurate measure of the population. The following is justification for such an analysis:

Comparison of Average Value Changes

If sold and unsold properties are similarly appraised, they should experience similar changes in value over time. Accordingly, it is possible to compute the average change in value over a selected period for sold and unsold parcels and, if necessary, test to determine whether observed differences are significant. If, for example, values for vacant sold parcels in an area have increased by 45 percent since the previous reappraisal, but values for vacant unsold parcels have increased only 10 percent, sold and unsold parcels appear to have not been equally appraised. This apparent disparity between the treatment of sold and unsold properties provides an initial indication of poor assessment practices and should trigger further inquiry into the reasons for the disparity.

IV. Analysis of Percentage Change in Total Assessed Value in the Sales File to Percentage Change in Assessed Value Continued

% Change in Total
Assessed Value in the Sales File

% Change in Total Assessed Value (excl. growth)

| -5.1 | 2009 | -0.45 |
|-------|------|-------|
| 7.09 | 2008 | 2.92 |
| 17.09 | 2007 | -0.56 |
| 1.29 | 2006 | 2.42 |
| 11.16 | 2005 | 1.97 |

COMMERCIAL: There is an approximate 5 point difference between the percent change in the sales file and the change in the assessed base. In reviewing the sales file one sale had a use change where the assessed value was decreased by \$1,510 which accounts for the change in the sales file. The percent change in the base is consistent with the assessment actions for the class.

V. Analysis of the R&O Median, Wgt. Mean, and Mean Ratios

There are three measures of central tendency calculated by the Division: median ratio, weighted mean ratio, and mean ratio. Since each measure of central tendency has strengths and weaknesses, the use of any statistic for equalization should be reconciled with the other two, as in an appraisal, based on the appropriateness in the use of the statistic for a defined purpose, the quantity of the information from which it was drawn, and the reliability of the data that was used in its calculation. An examination of the three measures can serve to illustrate important trends in the data if the measures do not closely correlate to each other.

The IAAO considers the median ratio the most appropriate statistical measure for use in determining level of value for direct equalization; the process of adjusting the values of classes or subclasses of property in response to the determination of level of value at a point above or below a particular range. Since the median ratio is considered neutral in relationship to either assessed value or selling price, its use in adjusting the class or subclass of properties will not change the relationships between assessed value and level of value already present within the class or subclass of properties, thus rendering an adjustment neutral in its impact on the relative tax burden to an individual property. Additionally, the median ratio is less influenced by the presence of extreme ratios, commonly called outliers. One outlier in a small sample size of sales can have controlling influence over the other measures of central tendency. The median ratio limits the distortion potential of an outlier.

The weighted mean ratio is viewed by the IAAO as the most appropriate statistical measure for indirect equalization; to ensure proper funding distribution of aid to political subdivisions, particularly when the distribution in part is based on the assessable value in that political subdivision, Standard on Ratio Studies, International Association of Assessing Officers, (2007). The weighted mean, because it is a value weighted ratio, best reflects a comparison of the assessed and market value of property in the political subdivision. If the distribution of aid to political subdivisions must relate to the market value available for assessment in the political subdivision, the measurement of central tendency used to analyze level of value should reflect the dollars of value available to be assessed. The weighted mean ratio does that more than either of the other measures of central tendency.

If the weighted mean ratio, because of its dollar-weighting feature, is significantly different from the median ratio, it may be an indication of other problems with assessment proportionality. When this occurs, an evaluation of the county's assessment practices and procedures is appropriate to discover remedies to the situation.

The mean ratio is used as a basis for other statistical calculations, such as the price related differential and coefficient of variation. However, the mean ratio has limited application in the analysis of level of value because it assumes a normal distribution of the data set around the mean ratio with each ratio having the same impact on the calculation regardless of the assessed value or the selling price.

V. Analysis of the R&O Median, Wgt. Mean, and Mean Ratios Continued

| | Median | Wgt. Mean | Mean |
|----------------|--------|-----------|------|
| R&O Statistics | 95 | 102 | 87 |

COMMERCIAL:Of the three measures of central tendency only the median is in the acceptable range.

VI. Analysis of R&O COD and PRD

In analyzing the statistical data of assessment quality, there are two measures primarily relied upon by assessment officials. The Coefficient of Dispersion, COD, is produced to measure assessment uniformity. A low COD tends to indicate good assessment uniformity as there is a smaller spread or dispersion of the ratios in the sales file. A COD of less than 15 suggests that there is good assessment uniformity. Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), pp. 235-237. The IAAO has issued performance standards for major property groups:

Single-family residences: a COD of 15 percent or less.

For newer and fairly homogeneous areas: a COD of 10 or less.

Income-producing property: a COD of 20 or less, or in larger urban jurisdictions, 15 or less.

Vacant land and other unimproved property, such as agricultural land: a COD of 20 or less.

Rural residential and seasonal properties: a COD of 20 or less.

Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), p. 246.

The Price Related Differential, PRD, is produced to measure assessment vertical uniformity (progressivity or regressivity). For example, assessments are considered regressive if high value properties are under-assessed relative to low value properties. A PRD of greater than 100 suggests that high value properties are relatively under-assessed. Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), pp. 239-240. A PRD of less than 100 indicates that high value properties are relatively over-assessed. As a general rule, except for small samples, a PRD should range between 98 and 103. This range is centered slightly above 100 to allow for a slightly upward measurement bias inherent in the PRD. Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), p. 247.

The analysis in this section indicates whether the COD and PRD meet the performance standards described above.

| | COD | PRD |
|----------------|-------|--------|
| R&O Statistics | 19.47 | 85.00 |
| Difference | 0.00 | -13.00 |

COMMERCIAL: The coefficient of dispersion is within the range and the price related differential is below the acceptable range. This could mean that the high value properties are relatively over assessed.

VII. Analysis of Change in Statistics Due to Assessor Actions

This section compares the statistical indicators from the Preliminary Statistical Reports to the same statistical indicators from the R&O Statistical Reports. The analysis that follows explains the changes in the statistical indicators in consideration of the assessment actions taken by the county assessor.

| | Preliminary Statistics | R&O Statistics | Change |
|-----------------|-------------------------------|---------------------------|--------|
| Number of Sales | 12 | 12 | 0 |
| Median | 97 | 95 | -2 |
| Wgt. Mean | 103 | 102 | -1 |
| Mean | 88 | 87 | -1 |
| COD | 18.88 | 19.47 | 0.59 |
| PRD | 85.26 | 85.00 | -0.26 |
| Minimum | 30.00 | 30.00 | 0.00 |
| Maximum | 118.71 | 118.71 | 0.00 |

COMMERCIAL: The change between the preliminary statistics and the Reports and Opinion statistics is consistent with the assessment actions reported by the County for this class of property.

Johnson County 2009 Assessment Actions taken to address the following property classes/subclasses:

Agricultural: Adjustments to Areas 1, 2 and 3 were made to bring the land uses within 69 to 75 percent of market value.

2009 Assessment Survey for Johnson County

Agricultural Appraisal Information

| 1. | Data collection done by: |
|-----|---|
| | Assessor |
| 2. | Valuation done by: |
| | Assessor |
| 3. | Pickup work done by whom: |
| | Assessor and Appraiser. |
| 4. | Does the county have a written policy or written standards to specifically define agricultural land versus rural residential acreages? |
| | No. The county uses the current regulations in the Assessor's Manual for |
| | definitions. They are following regulations and statutes when determining these definitions. |
| a. | How is agricultural land defined in this county? |
| | The county uses the Assessor's Manual definitions and according to statutes to define agricultural land. |
| 5. | When was the last date that the Income Approach was used to estimate or establish the market value of the properties in this class? |
| | We do not use the Income approach. |
| 6. | If the income approach was used, what Capitalization Rate was used? |
| | N/A |
| 7. | What is the date of the soil survey currently used? |
| | 1986 |
| 8. | What date was the last countywide land use study completed? |
| | It was originally completed in 1994 and is ongoing. A partial update was completed |
| | in 2003 but the county is using FSA maps and the office continues review and |
| | update. |
| a. | By what method? (Physical inspection, FSA maps, etc.) |
| | FSA aerial maps and physical inspections. |
| b. | By whom? |
| | Assessor and Deputy Assessor |
| c. | What proportion is complete / implemented at this time? |
| | 100% complete |
| 9. | Number of Market Areas/Neighborhoods/Assessor Locations in the |
| | agricultural property class: |
| | Three market areas |
| 10. | How are Market Areas/Neighborhoods/Assessor Locations developed? |
| | The market areas are defined by township. Area 1-Twp.6; Area 2- Twp.5; Area 3-Twp.4 |
| 11. | In the assessor's opinion, are there any other class or subclass groupings, other LCG groupings, that are more appropriate for valuation?than |

| | No |
|-----|---|
| a. | If yes, list. |
| | |
| 12. | In your opinion, what is the level of value of these groupings? |
| | NA |
| 13. | Has the county implemented (or is in the process of implementing) special |
| | valuation for agricultural land within the county? |
| | No |

Agricultural Land

I. Correlation

AGRICULTURAL UNIMPROVED:For this analysis the unimproved statistics were used because the County relied on them for their analysis. Analysis of the following tables demonstrates that the statistics support a level of value within the acceptable range. The coefficient of dispersion is within the acceptable range while the price related differential is just outside the range. The tables show that the sold properties were treated similarly to the unsold. A review of the statistics for agricultural land shows that the median for each market area is in the acceptable range. In Johnson County the statistics calculated for either the minimally improved or the unimproved are very consistent. Knowing the assessment practices in the County along with their methodology of analyzing sales to determine a schedule of values assures that both the sold and unsold parcels are valued without bias. The assessment actions of the county are consistent with the following tables and I find that the overall median level of value best represents the level of value for agricultural land.

II. Analysis of Percentage of Sales Used

This section documents the utilization of total sales compared to qualified sales in the sales file. Neb. Rev. Stat. 77-1327(2) (R. S. Supp., 2007) provides that all sales are deemed to be arm's length transactions unless determined to be otherwise under professionally accepted mass appraisal techniques. The county assessor is responsible for the qualification of the sales included in the residential sales file. The Division periodically reviews the procedures utilized by the county assessor to qualify/disqualify sales.

The Standard on Ratio Studies, International Association of Assessing Officials, (2007), indicates that low levels of sale utilization may indicate excessive trimming by the county assessor. Excessive trimming, the arbitrary exclusion or adjustment of arm's length transactions, may indicate an attempt to inappropriately exclude arm's length transactions to create the appearance of a higher level of value and quality of assessment. The sales file, in a case of excess trimming, will fail to properly represent the level of value and quality of assessment of the population of residential real property.

| | Total Sales | Qualified Sales | Percent Used |
|------|--------------------|------------------------|--------------|
| 2009 | 142 | 79 | 55.63 |
| 2008 | 163 | 103 | 63.19 |
| 2007 | 133 | 80 | 60.15 |
| 2006 | 117 | 70 | 59.83 |
| 2005 | 108 | 70 | 64.81 |

AGRICULTURAL UNIMPROVED: Table II indicates that the County has used a high proportion of the available agricultural sales and that the measurement of the class of property was done with all available arms length sales.

III. Analysis of the Preliminary, Trended Preliminary and R&O Median Ratio

The trended preliminary ratio is an alternative method to calculate a point estimate as an indicator of the level of value. This table compares the preliminary median ratio, trended preliminary median ratio, and R&O median ratio, presenting four years of data to reveal any trends in assessment practices. The analysis that follows compares the changes in these ratios to the assessment actions taken by the county assessor. If the county assessor's assessment practices treat all properties in the sales file and properties in the population in a similar manner, the trended preliminary ratio will correlate closely with the R&O median ratio. The following is the justification for the trended preliminary ratio:

Adjusting for Selective Reappraisal

The reliability of sales ratio statistics depends on unsold parcels being appraised in the same manner as sold parcels. Selective reappraisal of sold parcels distorts sales ratio results, possibly rendering them useless. Equally important, selective reappraisal of sold parcels (sales chasing) is a serious violation of basic appraisal uniformity and is highly unprofessional. Oversight agencies must be vigilant to detect the practice if it occurs and take necessary corrective action.

[To monitor sales chasing] A preferred approach is to use only sales that occur after appraised values are determined. However, as long as values from the most recent appraisal year are used in ratio studies, this is likely to be impractical. A second approach is to use values from the previous assessment year, so that most (or all) sales in the study follow the date values were set. In this approach, measures of central tendency must be adjusted to reflect changes in value between the previous and current year. For example, assume that the measure of central tendency is 0.924 and, after excluding parcels with changes in use or physical characteristics, that the overall change in value between the previous and current assessment years is 6.3 percent. The adjusted measure of central tendency is $0.924 \times 1.063 = 0.982$. This approach can be effective in determining the level of appraisal, but measures of uniformity will be unreliable if there has been any meaningful reappraisal activity for the current year.

Gloudemans, Robert J., Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), p. 315.

III. Analysis of the Preliminary, Trended Preliminary and R&O Median Ratio Continued

| | Preliminary Median | % Change in Assessed Value (excl. growth) | Trended Preliminary Ratio | R&O Median |
|------|-----------------------|---|------------------------------|---------------|
| 2009 | 69 | 3.67 | 72 | 71 |
| 2008 | 67.7 | 7.45 | 73 | 70.99 |
| 2007 | 71 | 1.79 | 72 | 71 |
| 2006 | 65 | 9.15 | 71 | 76 |
| 2005 | 68 | 10.51 | 75 | 76 |

AGRICULTURAL UNIMPROVED:After review of the trended preliminary ratio and the R&O median, it is apparent that the two statistics are similar and show strong support for a level of value within the acceptable range.

IV. Analysis of Percentage Change in Total Assessed Value in the Sales File to Percentage Change in Assessed Value

This section analyzes the percentage change of the assessed values in the sales file, between the 2009 Preliminary Statistical Reports and the 2009 R&O Statistical Reports, to the percentage change in the assessed value of all real property base, by class, reported in the 2008 County Abstract of Assessment for Real Property, Form 45, excluding growth valuation, compared to the 2008 Certificate of Taxes Levied (CTL) Report. For purposes of calculating the percentage change in the sales file, only the sales in the most recent year of the study period are used. If assessment practices treat sold and unsold properties consistently, the percentage change in the sales file and assessed base will be similar. The analysis of this data assists in determining if the statistical representations calculated from the sales file are an accurate measure of the population. The following is justification for such an analysis:

Comparison of Average Value Changes

If sold and unsold properties are similarly appraised, they should experience similar changes in value over time. Accordingly, it is possible to compute the average change in value over a selected period for sold and unsold parcels and, if necessary, test to determine whether observed differences are significant. If, for example, values for vacant sold parcels in an area have increased by 45 percent since the previous reappraisal, but values for vacant unsold parcels have increased only 10 percent, sold and unsold parcels appear to have not been equally appraised. This apparent disparity between the treatment of sold and unsold properties provides an initial indication of poor assessment practices and should trigger further inquiry into the reasons for the disparity.

IV. Analysis of Percentage Change in Total Assessed Value in the Sales File to Percentage Change in Assessed Value Continued

% Change in Total
Assessed Value in the Sales File

% Change in Total Assessed Value (excl. growth)

| 1.79 | 2009 | 3.67 |
|-------|------|-------|
| 7.11 | 2008 | 7.45 |
| 0.95 | 2007 | 1.79 |
| 13.39 | 2006 | 9.15 |
| 15.35 | 2005 | 10.51 |

AGRICULTURAL UNIMPROVED: After review of the percent change report, it appears that the county has appraised sold parcels similarly to unsold parcels.

V. Analysis of the R&O Median, Wgt. Mean, and Mean Ratios

There are three measures of central tendency calculated by the Division: median ratio, weighted mean ratio, and mean ratio. Since each measure of central tendency has strengths and weaknesses, the use of any statistic for equalization should be reconciled with the other two, as in an appraisal, based on the appropriateness in the use of the statistic for a defined purpose, the quantity of the information from which it was drawn, and the reliability of the data that was used in its calculation. An examination of the three measures can serve to illustrate important trends in the data if the measures do not closely correlate to each other.

The IAAO considers the median ratio the most appropriate statistical measure for use in determining level of value for direct equalization; the process of adjusting the values of classes or subclasses of property in response to the determination of level of value at a point above or below a particular range. Since the median ratio is considered neutral in relationship to either assessed value or selling price, its use in adjusting the class or subclass of properties will not change the relationships between assessed value and level of value already present within the class or subclass of properties, thus rendering an adjustment neutral in its impact on the relative tax burden to an individual property. Additionally, the median ratio is less influenced by the presence of extreme ratios, commonly called outliers. One outlier in a small sample size of sales can have controlling influence over the other measures of central tendency. The median ratio limits the distortion potential of an outlier.

The weighted mean ratio is viewed by the IAAO as the most appropriate statistical measure for indirect equalization; to ensure proper funding distribution of aid to political subdivisions, particularly when the distribution in part is based on the assessable value in that political subdivision, Standard on Ratio Studies, International Association of Assessing Officers, (2007). The weighted mean, because it is a value weighted ratio, best reflects a comparison of the assessed and market value of property in the political subdivision. If the distribution of aid to political subdivisions must relate to the market value available for assessment in the political subdivision, the measurement of central tendency used to analyze level of value should reflect the dollars of value available to be assessed. The weighted mean ratio does that more than either of the other measures of central tendency.

If the weighted mean ratio, because of its dollar-weighting feature, is significantly different from the median ratio, it may be an indication of other problems with assessment proportionality. When this occurs, an evaluation of the county's assessment practices and procedures is appropriate to discover remedies to the situation.

The mean ratio is used as a basis for other statistical calculations, such as the price related differential and coefficient of variation. However, the mean ratio has limited application in the analysis of level of value because it assumes a normal distribution of the data set around the mean ratio with each ratio having the same impact on the calculation regardless of the assessed value or the selling price.

V. Analysis of the R&O Median, Wgt. Mean, and Mean Ratios Continued

| | Median | Wgt. Mean | Mean |
|----------------|--------|-----------|------|
| R&O Statistics | 71 | 68 | 70 |

AGRICULTURAL UNIMPROVED:In the comparison of measures of central tendency only the weighted mean is outside the acceptable range. The spread of the measures is only 3 points.

VI. Analysis of R&O COD and PRD

In analyzing the statistical data of assessment quality, there are two measures primarily relied upon by assessment officials. The Coefficient of Dispersion, COD, is produced to measure assessment uniformity. A low COD tends to indicate good assessment uniformity as there is a smaller spread or dispersion of the ratios in the sales file. A COD of less than 15 suggests that there is good assessment uniformity. Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), pp. 235-237. The IAAO has issued performance standards for major property groups:

Single-family residences: a COD of 15 percent or less.

For newer and fairly homogeneous areas: a COD of 10 or less.

Income-producing property: a COD of 20 or less, or in larger urban jurisdictions, 15 or less.

Vacant land and other unimproved property, such as agricultural land: a COD of 20 or less.

Rural residential and seasonal properties: a COD of 20 or less.

Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), p. 246.

The Price Related Differential, PRD, is produced to measure assessment vertical uniformity (progressivity or regressivity). For example, assessments are considered regressive if high value properties are under-assessed relative to low value properties. A PRD of greater than 100 suggests that high value properties are relatively under-assessed. Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), pp. 239-240. A PRD of less than 100 indicates that high value properties are relatively over-assessed. As a general rule, except for small samples, a PRD should range between 98 and 103. This range is centered slightly above 100 to allow for a slightly upward measurement bias inherent in the PRD. Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), p. 247.

The analysis in this section indicates whether the COD and PRD meet the performance standards described above.

| | COD | PRD |
|----------------|-------|--------|
| R&O Statistics | 15.10 | 103.13 |
| Difference | 0.00 | 0.13 |

AGRICULTURAL UNIMPROVED: The coefficient of dispersion is inside the acceptable range while the Price Related Differential is just outside the range.

VII. Analysis of Change in Statistics Due to Assessor Actions

This section compares the statistical indicators from the Preliminary Statistical Reports to the same statistical indicators from the R&O Statistical Reports. The analysis that follows explains the changes in the statistical indicators in consideration of the assessment actions taken by the county assessor.

| | Preliminary Statistics | R&O Statistics | Change |
|-----------------|-------------------------------|---------------------------|--------|
| Number of Sales | 83 | 79 | -4 |
| Median | 69 | 71 | 2 |
| Wgt. Mean | 66 | 68 | 2 |
| Mean | 68 | 70 | 2 |
| COD | 15.79 | 15.10 | -0.69 |
| PRD | 102.55 | 103.13 | 0.58 |
| Minimum | 39.78 | 39.78 | 0.00 |
| Maximum | 131.22 | 131.22 | 0.00 |

AGRICULTURAL UNIMPROVED: The change between the preliminary statistics and the Reports and Opinion statistics is consistent with the assessment actions reported by the County for this class of property.

PLAN OF ASSESSMENT FOR JOHNSON COUNTY

To: Johnson County Board of Equalization
Nebr. Dept of Revenue--Property Assessment Division

As required by Sec. 77-1311, R.R.S. Nebr. as amended by 2005 Neb. Laws LB263, Section 9, the assessor shall prepare a Plan of Assessment on or before June 15 of each year, which shall describe the assessment actions the county assessor plans to make for the next assessment year and two years thereafter and submit such plan to the County Board of Equalization on or before July 31 of each year, and may amend the plan, if necessary, after a budget is approved by the County Board, and submit a copy of the plan and any amendments to the Nebr. Dept of Revenue—Property Assessment Division on or before October 31 each year. The plan shall describe all the assessment actions necessary to achieve the levels of value and quality of assessment practices required by law and the resources necessary to complete those actions.

The following is a plan of assessment for:

Tax Year 2009:

Residential—

- 1. Review in-house preliminary sale statistics in all residential subclasses, review the preliminary statistical information received from Nebr. Dept of Revenue—Property Assessment Division, and analyze for any possible subclass percentage adjustment needed to comply with statistical measures as required by law.
- 2. Continue with review and analysis of sales as they occur.

Commercial—

- 1. Review in-house preliminary sale statistics in all commercial subclasses, review the preliminary statistical information received from Nebr. Dept of Revenue—Property Assessment Division, and analyze for any possible subclass percentage adjustment needed to comply with statistical measures as required by law.
- 2. Continue with review and analysis of sales as they occur.

Agricultural/Horticultural Land—

1. Review preliminary sale statistics developed in-house and preliminary statistical information received from Nebr. Dept of Revenue—Property Assessment Division, adjusting by class/subclass to arrive at acceptable levels of value.

- 2. Continue with review and analysis of sales as they occur.
- 3. Continue land use update using most current aerial photography obtainable.
- 4. Implement or continue to work on 2008 soil conversion.

BUDGET REQUEST FOR 2008-2009:

Requested budget of \$20,000 is needed to:

- 1. Complete pickup work for new improvements or improvement changes made throughout county in all classes;
- 2. Analyze and possible adjustment to class/subclass of residential.
- 3. Analyze and possible adjustment to class/subclass of commercial.
- **4.** Analyze and possible adjustments to class/subclass of agland.

Tax Year 2010:

Residential—

- 1. Review preliminary sale statistics developed in-house and preliminary statistical information received from Nebr. Dept of Revenue--Property Assessment Division, analyze for any possible subclass percentage adjustment needed to comply with statistical measures as required by law.
- 2. Continue with review and analysis of sales as they occur.

Commercial—

- 1. Review preliminary sale statistics developed in-house and preliminary statistical information received from Nebr. Dept of Revenue—Property Assessment Division, analyze for any possible subclass percentage adjustment needed to comply with statistical measures as required by law.
- 2. Continue with review and analysis of sales as they occur.

Agricultural/Horticultural Land—

- 1. Review preliminary sale statistics developed in-house and preliminary statistical information received from Nebr. Dept of Revenue—Property Assessment Division, analyze for any possible subclass percentage adjustment needed to comply with statistical measures as required by law.
- 2. Continue with review and analysis of sales as they occur.
- 3. If necessary, continue land use update using most current aerial photography obtainable.

Tax Year 2011:

Residential—

1. Review preliminary sale statistics developed in-house and preliminary statistical information received from Nebr. Dept of Revenue--Property

Assessment Division, analyze for any possible subclass percentage adjustment needed to comply with statistical measures as required by law.

2. Continue with review and analysis of sales as they occur.

Commercial—

- 1. Review preliminary sale statistics developed in-house and preliminary statistical information received from Nebr. Dept of Revenue—Property Assessment Division, analyze for any possible subclass percentage adjustment needed to comply with statistical measures as required by law.
- 2. Continue with review and analysis of sales as they occur.

Agricultural/Horticultural Land—

- 1. Review preliminary sale statistics developed in-house and preliminary statistical information received from Nebr. Dept of Revenue—Property Assessment Division, analyze for any possible subclass percentage adjustment needed to comply with statistical measures as required by law.
- 2. Continue with review and analysis of sales as they occur.
- 3. If necessary, continue land use update using most current aerial photography obtainable.

|-----|--|
| | 1 |
| 2. | Appraiser(s) on staff |
| | 0 |
| 3. | Other full-time employees |
| | 0 |
| 4. | Other part-time employees |
| | 0 |
| 5. | Number of shared employees |
| | 1 employee is shared with the Clerk's office, Treasurer's Office and Child Support |
| 6. | Assessor's requested budget for current fiscal year |
| | \$115,501 |
| 7. | Part of the budget that is dedicated to the computer system |
| | \$0 |
| 8. | Adopted budget, or granted budget if different from above |
| | \$115,501 |
| 9. | Amount of the total budget set aside for appraisal work |
| | \$20,000 |
| 10. | Amount of the total budget set aside for education/workshops |
| | \$650 |
| 11. | Appraisal/Reappraisal budget, if not part of the total budget |
| | |
| 12. | Other miscellaneous funds |
| | GIS 27,500 |
| 13. | Total budget |
| | \$115,501 |
| a. | Was any of last year's budget not used: |
| | Minimal amount. \$155.22 |

B. Computer, Automation Information and GIS

| 1. | Administrative software |
|----|-------------------------|
| | TerraScan |
| 2. | CAMA software |
| | TerraScan |

| 3. | Cadastral maps: Are they currently being used? |
|----|--|
| | Yes |
| 4. | Who maintains the Cadastral Maps? |
| | Assessor and Deputy Assessor |
| 5. | Does the county have GIS software? |
| | Yes |
| 6. | Who maintains the GIS software and maps? |
| | Assessor and Deputy Assessor |
| 7. | Personal Property software: |
| | TerraScan |

C. Zoning Information

| 1. | Does the county have zoning? |
|----|---|
| | Yes |
| 2. | If so, is the zoning countywide? |
| | Yes |
| 3. | What municipalities in the county are zoned? |
| | Cook, Crab Orchard, Elk Creek, Sterling, and Tecumseh |
| 4. | When was zoning implemented? |
| | January 1, 2006 |

D. Contracted Services

| 1. | Appraisal Services |
|----|------------------------------|
| | Wayne Cole dba Linsali, Inc. |
| 2. | Other services |
| | |

Certification

This is to certify that the 2009 Reports and Opinions of the Property Tax Administrator have been sent to the following:

Four copies to the Tax Equalization and Review Commission, by hand delivery.

One copy to the Johnson County Assessor, by hand delivery.

Dated this 7th day of April, 2009.

PROPERTY TAX ADMINISTRATOR
