# 2010 Opinions of the Property Tax Administrator for Pierce County

My opinions and recommendations are stated as a conclusion based on all of the factors known to me regarding the assessment practices and statistical analysis for this county. See, Neb. Rev. Stat. §77-5027 (R. S. Supp., 2005). While the median assessment sales ratio from the Qualified Statistical Reports for each class of real property is considered, my opinion of the level of value for a class of real property may be determined from other evidence contained within this Reports and Opinions of the Property Tax Administrator. My opinion of quality of assessment for a class of real property may be influenced by the assessment practices of the county assessor.

#### **Residential Real Property**

It is my opinion that the level of value of the class of residential real property in Pierce County is 96% of market value. The quality of assessment for the class of residential real property in Pierce County indicates the assessment practices meet generally accepted mass appraisal practices.

#### **Commercial Real Property**

It is my opinion that the level of value of the class of commercial real property in Pierce County is 96% of market value. The quality of assessment for the class of commercial real property in Pierce County indicates the assessment practices meet generally accepted mass appraisal practices.

#### Agricultural Land or Special Valuation of Agricultural Land

It is my opinion that the level of value of the class of agricultural land in Pierce County is 70% of market value. The quality of assessment for the class of agricultural land in Pierce County indicates the assessment practices meet generally accepted mass appraisal practices.

Dated this 7th day of April, 2010.

PROPERTY TAX ADMINISTRATOR OF PROPERTY ASSESSMEN

Ruth A. Sorensen Property Tax Administrator

# 2010 Assessment Actions for Pierce County taken to address the following property classes/subclasses:

#### Residential

Completed the pickup work of new and omitted construction for the residential class.

The county reviewed the town of Pierce and the rural residential acreages for 2010 and made the necessary adjustments as indicated by a market analysis. Increases were made to Bi-Level and Split Level houses in Pierce. The rural residential acreages increased the 1 story homes built between 1990 and 1999.

### **Residential Appraisal Information**

| 1.   | Valuation data collection done by:  |
|------|---|
|      | Assessor and staff  |
| 2.   | List the valuation groupings used by the County:  |
|      | Valuation Group 1 - Pierce  |
|      | 5 Plainview   |
|      | 10 - Osmond   |
|      | 15 - Hadar  |
|      | 20 - Foster   |
|      | 25 - McLean   |
|      | 30 - Breslau  |
|      | 35 - West Randolph  |
|      | 40 - Rural Acreages   |
| a.   | Describe the specific characteristics of the valuation groupings that make them                     |
|      | unique.   |
|      | Each valuation group is defined by the location in the county and similar property characteristics. |
| 3.   | What approach(es) to value is/are used for this class to estimate the market                        |
| ] 3. | value of properties? List or describe.  |
|      | Market approach   |
| 4    | When was the last lot value study completed?  |
| · ·  | When each assessor location is revalued or market analysis completed.                               |
| a.   | What methodology was used to determine the residential lot values?                                  |
|      | Vacant lot sales  |
| 5.   | Is the same costing year for the cost approach being used for the entire                            |
|      | valuation grouping? If not, identify and explain the differences?                                   |
|      | Pierce and Hadar – 2003, Rural residential farms – 2004, Plainview, Foster, Mclean,                 |
|      | Breslau, West Randolph, Mobile homes - 2008   |
| 6.   | Does the County develop the depreciation study(ies) based on local market                           |
|      | information or does the County use the tables provided by their CAMA                                |
|      | vender?   |
|      | Uses the table provided in by the CAMA Vendor   |
| a.   | How often does the County update depreciation tables?   |
|      | When a reappraisal is completed.  |
| 7.   | Pickup work:  |
| a.   | Is pickup work done annually and is it completed by March 19 <sup>th</sup> ?                        |
|      | Yes   |
| b.   | By Whom?  |
|      | Assessor and staff  |
| c.   | Is the valuation process (cost date and depreciation schedule or market                             |
|      | comparison) used for the pickup work the same as the one that was used for                          |

|    | the valuation group?  |  |  |  |  |  |  |
|----|---|--|--|--|--|--|--|
|    | Yes   |  |  |  |  |  |  |
| 8. | What is the County's progress with the 6 year inspection and review                   |  |  |  |  |  |  |
|    | requirement? (Statute 77-1311.03)   |  |  |  |  |  |  |
|    | The 6 year inspection coincides with the three year plan of assessment.               |  |  |  |  |  |  |
| a. | Does the County maintain a tracking process? If yes describe.                         |  |  |  |  |  |  |
|    | Yes, as described in the three year plan of assessment. The cyclical process is dated |  |  |  |  |  |  |
|    | as far back as the 2000 assessment year and the cyclical review process is            |  |  |  |  |  |  |
|    | documented in the 3 year plan.  |  |  |  |  |  |  |
| b. | How are the results of the portion of the properties inspected and reviewed           |  |  |  |  |  |  |
|    | applied to the balance of the county?   |  |  |  |  |  |  |
|    | They are valued in the same manner.   |  |  |  |  |  |  |

#### **Residential Real Property**

#### I. Correlation

The level of value for the residential real property in Pierce County, as determined by the PTA is 96%. The mathematically calculated median is 96%.

RESIDENTIAL:Pierce County reported in the assessment actions that the village of Pierce was updated in the Bi-Level and Split Level homes and that the rural one story homes built between the years of 1990-1999 were adjusted. The county has aggressively continued with the plan of assessment that was established in the 3 year plan of assessment. There will be no recommendation for adjustment to the residential properties for the 2010 assessment year.

#### II. Analysis of Sales Verification

Neb. Rev. Stat. 77-1327(2) provides that all sales are deemed to be arms length transactions unless determined to be otherwise under professionally accepted mass appraisal techniques. The county assessor is responsible for the qualification of the sales included in the state sales file.

The Standard on Ratio Studies, International Association of Assessing Officials (2007), indicates that excessive trimming (the arbitrary exclusion or adjustment of arms length transactions) may indicate an attempt to inappropriately exclude arms length transactions to create the appearance of a higher level of value and quality of assessment. The sales file, in a case of excess trimming, will fail to properly represent the level of value and quality of assessment of the population of real property.

The Division frequently reviews the procedures used by the county assessor to qualify sales to ensure bias does not exist in judgments made. Arms length transactions should only be excluded when they compromise the reliability of the resulting statistics. In cases where a county assessor has disqualified sales without substantiation, the Division may include such sales in the ratio study.

RESIDENTIAL:Pierce County mails a survey/questionnaire on all sales transactions. There is a separate survey for the residential, commercial and agricultural class of property. They include a self addressed stamped envelope for the recipient to respond and return the survey/questionnaire. If the survey/questionnaire is not returned it will be considered an arms length transaction. In some instances they will follow-up with a telephone call to the buyer or seller if the need for further review is apparent.

The survey/questionnaire is kept with the property record card for future reference.

A review of the non-qualified sales was completed and it was determined that the county was reasonable with the non-qualified conclusions. The majority of the sales were either family transactions or substantially changed parcels and a few foreclosures.

#### III. Measure of Central Tendency

There are three measures of central tendency calculated by the Division: median ratio, weighted mean ratio, and mean ratio. Since each measure of central tendency has strengths and weaknesses, the use of any statistic for equalization should be reconciled with the other two, as in an appraisal, based on the appropriateness in the use of the statistic for a defined purpose, the quantity of the information from which it was drawn, and the reliability of the data that was used in its calculation. An examination of the three measures can serve to illustrate important trends in the data if the measures do not closely correlate to each other.

The IAAO considers the median ratio the most appropriate statistical measure for use in determining level of value for direct equalization; the process of adjusting the values of classes or subclasses of property in response to the determination of level of value at a point above or below a particular range. Since the median ratio is considered neutral in relationship to either assessed value or selling price, its use in adjusting the class or subclass of properties will not change the relationships between assessed value and level of value already present within the class or subclass of properties, thus rendering an adjustment neutral in its impact on the relative tax burden to an individual property. Additionally, the median ratio is less influenced by the presence of extreme ratios, commonly called outliers. One outlier in a small sample size of sales can have controlling influence over the other measures of central tendency. The median ratio limits the distortion potential of an outlier.

The weighted mean ratio is viewed by the IAAO as the most appropriate statistical measure for indirect equalization. The weighted mean, because it is a value weighted ratio, best reflects a comparison of the assessed and market value of property in the political subdivision. If the distribution of aid to political subdivisions must relate to the market value available for assessment in the political subdivision, the measurement of central tendency used to analyze level of value should reflect the dollars of value available to be assessed. The weighted mean ratio does that more than either of the other measures of central tendency.

If the weighted mean ratio, because of its dollar-weighting feature, is significantly different from the median ratio, it may be an indication of other problems with assessment proportionality. When this occurs, an evaluation of the county's assessment practices and procedures is appropriate to discover remedies to the situation.

The mean ratio is used as a basis for other statistical calculations, such as the price related differential and coefficient of variation. However, the mean ratio has limited application in the analysis of level of value because it assumes a normal distribution of the data set around the mean ratio with each ratio having the same impact on the calculation regardless of the assessed value or the selling price.

|                | Median | Wgt. Mean | Mean |
|----------------|--------|-----------|------|
| R&O Statistics | 96     | 90        | 99   |

#### IV. Analysis of Quality of Assessment

In analyzing the statistical data of assessment quality, there are two measures upon which assessment officials will primarily rely: the Coefficient of Dispersion (COD), and the Price Related Differential (PRD). Whether such statistics can be relied upon as meaningful for the population depends on whether the sample is representative.

The COD is commonly referred to as the index of assessment inequality. It is used to measure how closely the individual ratios are clustered around the median ratio and suggests the degree of uniformity or inaccuracy resulting in the assessments. The COD is computed by dividing the average deviation by the median ratio. For example, a COD of 20 means half of the ratios are 20 percent above or below the median. The closer the ratios are grouped around the median, the more equitable the assessment of property tends to be. Conversely, if the dispersion is quite large, there is a large spread in the ratios typically indicating a large spread around the median in the assessment of property, which results in an inequity in assessment and taxes. There is no range of acceptability stated in the Nebraska statutes for the COD measure. The International Association of Assessing Officers recommended ratio study performance standards are as follows:

Single-family residences: a COD of 15 percent or less.

For newer and fairly homogeneous areas: a COD of 10 or less.

Income-producing property: a COD of 20 or less, or in larger urban jurisdictions, 15 or less.

Vacant land and other unimproved property, such as agricultural land: a COD of 20 or less.

Rural residential and seasonal properties: a COD of 20 or less.

Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), p. 246.

In unusually homogeneous types of property low CODs can be anticipated; however, in all other cases CODs less than 5 percent may be indicative of non-representative samples or the selective reappraisal of sold parcels.

The PRD, also known as the index of regression, is a measurement of the relationship between the ratios of high-value and low-value properties to determine if the value of property has any influence on the assessment ratio. It is calculated by dividing the arithmetic mean ratio by the weighted mean ratio. The PRD provides an indicator of the degree to which high-value properties are over-assessed or under-assessed in relation to low-value properties. A PRD of 100 indicates there is no bias in the assessment of high-value properties in comparison to low-value properties. A PRD greater than 100 indicates the assessments are regressive, which means low-value properties tend to have a higher assessment ratio than high-value properties. The result is the owner of a low-value property pays a greater amount of tax in relation to value than the owner of a high-value property. Conversely, a PRD less than 100 indicates that high-value properties are over assessed in relation to low-value properties.

There is no range of acceptability stated in the Nebraska statutes for the PRD measure. The Standard of Ratio Studies, adopted by the International Association of Assessing Officers, July,

2007, recommends that the PRD should lie between 98 and 103. This range is centered slightly above 100 to allow for a slightly upward measurement bias inherent in the PRD.

The PRD is calculated based on the selling price/assessed value in the sales file. This measure can be misleading if the dollar value of the records in the sales file is not proportionate to the dollar value of records in the population.

Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), p. 247.

The analysis in this section displays the calculated COD and PRD measures for Pierce County, which are considered as one part of the analysis of the County's assessment practices.

|                | COD   | PRD    |
|----------------|-------|--------|
| R&O Statistics | 18.29 | 109.40 |

RESIDENTIAL: The COD and PRD are both slightly above the acceptable parameters. There is one sale in Plainview, Book 2009 page 144 that is an extreme outlier. Without that sale included in the study the COD would be 13.98 and PRD 104.25, which would be within the acceptable parameters.

# 2010 Assessment Actions for Pierce County taken to address the following property classes/subclasses:

#### **Commercial**

Blaser Appraisal inspected and revalued all the commercial property in the county for implementation in the 2010 assessment year. They also completed the pickup work of new and omitted construction for the commercial class.

### **2010** Assessment Survey for Pierce County

### **Commercial / Industrial Appraisal Information**

| 1. | Valuation data collection done by:  |  |  |  |
|----|---|--|--|--|
|    | Assessor and Staff  |  |  |  |
| 2. | List the valuation groupings used by the County:  |  |  |  |
|    | Valuation Group 1 – Pierce  |  |  |  |
|    | 5 – Plainview   |  |  |  |
|    | 10 - Osmond   |  |  |  |
|    | 15 - Hadar  |  |  |  |
|    | 20 - Foster   |  |  |  |
|    | 25 - McLean   |  |  |  |
|    | 30 - Breslau  |  |  |  |
|    | 35 - West Randolph  |  |  |  |
|    | 40 - Rural Acreages   |  |  |  |
| a. | Describe the specific characteristics of the valuation groupings that make them                     |  |  |  |
|    | unique.   |  |  |  |
|    | Each valuation group is defined by the location in the county and similar property characteristics. |  |  |  |
| 3. | What approach(es) to value is/are used for this class to estimate the market                        |  |  |  |
| J. | value of properties? List or describe.  |  |  |  |
|    | Market approach   |  |  |  |
| 4  | When was the last lot value study completed?  |  |  |  |
|    | 2009  |  |  |  |
| a. | What methodology was used to determine the commercial lot values?                                   |  |  |  |
|    | Vacant lot sales  |  |  |  |
| 5. | Is the same costing year for the cost approach being used for entire valuation                      |  |  |  |
|    | grouping? If not, identify and explain the differences?   |  |  |  |
|    | Yes   |  |  |  |
| 6. | Does the County develop the depreciation study(ies) based on local market                           |  |  |  |
|    | information or does the County use the tables provided by their CAMA                                |  |  |  |
|    | vender?   |  |  |  |
|    | Use the tables provided by the CAMA vendor  |  |  |  |
| a. | How often does the County update the depreciation tables?   |  |  |  |
|    | Current   |  |  |  |
| 7. | Pickup work:  |  |  |  |
| a. | Is pickup work done annually and is it completed by March 19 <sup>th</sup> ?                        |  |  |  |
|    | Yes   |  |  |  |
| b. | By Whom?  |  |  |  |
|    | Assessor and staff  |  |  |  |
| c. | Is the valuation process (cost date and depreciation schedule or market                             |  |  |  |
|    | comparison) used for the pickup work the same as the one that was used for                          |  |  |  |
|    | the valuation group?  |  |  |  |

|    | Yes   |  |  |  |  |  |  |  |
|----|---|--|--|--|--|--|--|--|
| 8. | What is the Counties progress with the 6 year inspection and review requirement? (Statute 77-1311.03)   |  |  |  |  |  |  |  |
|    | The 6 year inspection coincides with the three year plan of assessment.   |  |  |  |  |  |  |  |
| a. | Does the County maintain a tracking process? If yes describe.   |  |  |  |  |  |  |  |
|    | Yes, as described in the three year plan of assessment. The cyclical process is dated as far back as the 2000 assessment year and the cyclical review process is documented in the 3 year plan. |  |  |  |  |  |  |  |
| b. | How are the results of the portion of the properties inspected and reviewed   |  |  |  |  |  |  |  |
|    | applied to the balance of the county?   |  |  |  |  |  |  |  |
|    | They are valued in the same manner.   |  |  |  |  |  |  |  |

#### **Commerical Real Property**

#### I. Correlation

The level of value for the commercial real property in Pierce County, as determined by the PTA is 96%. The mathematically calculated median is 96%.

COMMERCIAL:Blaser Appraisal Company was hired by the county to do a complete reappraisal of the commercial class of property. The company inspected and revalued all the commercial property in the county for 2010. The commercial class of property only had 13 arm?s length transactions in the sales file. There are a little over 400 total parcels in the county.

Based on the assessment practices and the reappraisal there is no recommendation for adjustment to the commercial class of property.

#### II. Analysis of Sales Verification

Neb. Rev. Stat. 77-1327(2) provides that all sales are deemed to be arms length transactions unless determined to be otherwise under professionally accepted mass appraisal techniques. The county assessor is responsible for the qualification of the sales included in the state sales file.

The Standard on Ratio Studies, International Association of Assessing Officials (2007), indicates that excessive trimming (the arbitrary exclusion or adjustment of arms length transactions) may indicate an attempt to inappropriately exclude arms length transactions to create the appearance of a higher level of value and quality of assessment. The sales file, in a case of excess trimming, will fail to properly represent the level of value and quality of assessment of the population of real property.

The Division frequently reviews the procedures used by the county assessor to qualify sales to ensure bias does not exist in judgments made. Arms length transactions should only be excluded when they compromise the reliability of the resulting statistics. In cases where a county assessor has disqualified sales without substantiation, the Division may include such sales in the ratio study.

COMMERCIAL:Pierce County mails a survey/questionnaire on all sales transactions. There is a separate survey for the residential, commercial and agricultural class of property. They include a self addressed stamped envelope for the recipient to respond and return the survey/questionnaire. If the survey/questionnaire is not returned it will be considered an arms length transaction. In some instances they will follow-up with a telephone call to the buyer or seller if the need for further review is apparent.

The survey/questionnaire is kept with the property record card for future reference.

A review of the non-qualified sales was completed and it was determined that the county was reasonable with the non-qualified conclusions. The majority of the sales were either family transactions or substantially changed parcels and a few foreclosures.

#### III. Measure of Central Tendency

There are three measures of central tendency calculated by the Division: median ratio, weighted mean ratio, and mean ratio. Since each measure of central tendency has strengths and weaknesses, the use of any statistic for equalization should be reconciled with the other two, as in an appraisal, based on the appropriateness in the use of the statistic for a defined purpose, the quantity of the information from which it was drawn, and the reliability of the data that was used in its calculation. An examination of the three measures can serve to illustrate important trends in the data if the measures do not closely correlate to each other.

The IAAO considers the median ratio the most appropriate statistical measure for use in determining level of value for direct equalization; the process of adjusting the values of classes or subclasses of property in response to the determination of level of value at a point above or below a particular range. Since the median ratio is considered neutral in relationship to either assessed value or selling price, its use in adjusting the class or subclass of properties will not change the relationships between assessed value and level of value already present within the class or subclass of properties, thus rendering an adjustment neutral in its impact on the relative tax burden to an individual property. Additionally, the median ratio is less influenced by the presence of extreme ratios, commonly called outliers. One outlier in a small sample size of sales can have controlling influence over the other measures of central tendency. The median ratio limits the distortion potential of an outlier.

The weighted mean ratio is viewed by the IAAO as the most appropriate statistical measure for indirect equalization. The weighted mean, because it is a value weighted ratio, best reflects a comparison of the assessed and market value of property in the political subdivision. If the distribution of aid to political subdivisions must relate to the market value available for assessment in the political subdivision, the measurement of central tendency used to analyze level of value should reflect the dollars of value available to be assessed. The weighted mean ratio does that more than either of the other measures of central tendency.

If the weighted mean ratio, because of its dollar-weighting feature, is significantly different from the median ratio, it may be an indication of other problems with assessment proportionality. When this occurs, an evaluation of the county's assessment practices and procedures is appropriate to discover remedies to the situation.

The mean ratio is used as a basis for other statistical calculations, such as the price related differential and coefficient of variation. However, the mean ratio has limited application in the analysis of level of value because it assumes a normal distribution of the data set around the mean ratio with each ratio having the same impact on the calculation regardless of the assessed value or the selling price.

|                | Median | Wgt. Mean | Mean |
|----------------|--------|-----------|------|
| R&O Statistics | 96     | 96        | 96   |

#### IV. Analysis of Quality of Assessment

In analyzing the statistical data of assessment quality, there are two measures upon which assessment officials will primarily rely: the Coefficient of Dispersion (COD), and the Price Related Differential (PRD). Whether such statistics can be relied upon as meaningful for the population depends on whether the sample is representative.

The COD is commonly referred to as the index of assessment inequality. It is used to measure how closely the individual ratios are clustered around the median ratio and suggests the degree of uniformity or inaccuracy resulting in the assessments. The COD is computed by dividing the average deviation by the median ratio. For example, a COD of 20 means half of the ratios are 20 percent above or below the median. The closer the ratios are grouped around the median, the more equitable the assessment of property tends to be. Conversely, if the dispersion is quite large, there is a large spread in the ratios typically indicating a large spread around the median in the assessment of property, which results in an inequity in assessment and taxes. There is no range of acceptability stated in the Nebraska statutes for the COD measure. The International Association of Assessing Officers recommended ratio study performance standards are as follows:

Single-family residences: a COD of 15 percent or less.

For newer and fairly homogeneous areas: a COD of 10 or less.

Income-producing property: a COD of 20 or less, or in larger urban jurisdictions, 15 or less.

Vacant land and other unimproved property, such as agricultural land: a COD of 20 or less.

Rural residential and seasonal properties: a COD of 20 or less.

Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), p. 246.

In unusually homogeneous types of property low CODs can be anticipated; however, in all other cases CODs less than 5 percent may be indicative of non-representative samples or the selective reappraisal of sold parcels.

The PRD, also known as the index of regression, is a measurement of the relationship between the ratios of high-value and low-value properties to determine if the value of property has any influence on the assessment ratio. It is calculated by dividing the arithmetic mean ratio by the weighted mean ratio. The PRD provides an indicator of the degree to which high-value properties are over-assessed or under-assessed in relation to low-value properties. A PRD of 100 indicates there is no bias in the assessment of high-value properties in comparison to low-value properties. A PRD greater than 100 indicates the assessments are regressive, which means low-value properties tend to have a higher assessment ratio than high-value properties. The result is the owner of a low-value property pays a greater amount of tax in relation to value than the owner of a high-value property. Conversely, a PRD less than 100 indicates that high-value properties are over assessed in relation to low-value properties.

There is no range of acceptability stated in the Nebraska statutes for the PRD measure. The Standard of Ratio Studies, adopted by the International Association of Assessing Officers, July,

2007, recommends that the PRD should lie between 98 and 103. This range is centered slightly above 100 to allow for a slightly upward measurement bias inherent in the PRD.

The PRD is calculated based on the selling price/assessed value in the sales file. This measure can be misleading if the dollar value of the records in the sales file is not proportionate to the dollar value of records in the population.

Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), p. 247.

The analysis in this section displays the calculated COD and PRD measures for Pierce County, which are considered as one part of the analysis of the County's assessment practices.

|                | COD  | PRD   |
|----------------|------|-------|
| R&O Statistics | 2.84 | 99.58 |

COMMERCIAL: The coefficient of dispersion and the price related differential on the 13 sales in the commercial class of property are within the acceptable parameters. The reappraisal of the commercial class with a COD of less than 5 percent may indicate the sample size of sales was not representative of the entire class. The county completed a reappraisal on the entire class and applied the reappraisal to both sold and unsold properties.

# 2010 Assessment Actions for Pierce County taken to address the following property classes/subclasses:

#### Agricultural

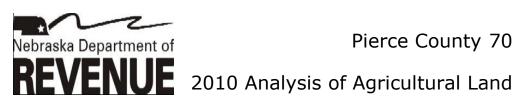

Market analysis using qualified ag sales. Implemented new soil conversion from alpha to numeric.

### **For Pierce County**

#### **Agricultural Land**

#### I. Correlation

The level of value for the agricultural real property in Pierce County, as determined by the PTA is 70%. The mathematically calculated median is 70%.

#### AGRICULTURAL LAND:

An analysis of the sales file was prepared for Pierce County. The county assessor studied the file and came to the conclusion one market area is sufficient for Pierce County.

The proportionality of the sales file over the three year study period was addressed. The county has sufficient sales of the agricultural class and the sales also include a proportionate representation of the land use in the county. The expanded analysis was discussed with the county assessor and the conclusion supported the efforts of the county in establishing the 2010 agricultural land values which are equalized both within the County and with the adjoining counties.

The county has achieved a uniform and proportionate level of value for the agricultural class and there will not be a non-binding recommendation for this class.

#### **For Pierce County**

#### II. Analysis of Sales Verification

Neb. Rev. Stat. 77-1327(2) provides that all sales are deemed to be arms length transactions unless determined to be otherwise under professionally accepted mass appraisal techniques. The county assessor is responsible for the qualification of the sales included in the state sales file.

The Standard on Ratio Studies, International Association of Assessing Officials (2007), indicates that excessive trimming (the arbitrary exclusion or adjustment of arms length transactions) may indicate an attempt to inappropriately exclude arms length transactions to create the appearance of a higher level of value and quality of assessment. The sales file, in a case of excess trimming, will fail to properly represent the level of value and quality of assessment of the population of real property.

The Division frequently reviews the procedures used by the county assessor to qualify sales to ensure bias does not exist in judgments made. Arms length transactions should only be excluded when they compromise the reliability of the resulting statistics. In cases where a county assessor has disqualified sales without substantiation, the Division may include such sales in the ratio study.

#### AGRICULTURAL LAND:

Pierce County mails a survey/questionnaire on all sales transactions. There is a separate survey for the residential, commercial and agricultural class of property. They include a self addressed stamped envelope for the recipient to respond and return the survey/questionnaire. If the survey/questionnaire is not returned it will be considered an arm's length transaction. In some instances they will follow-up with a telephone call to the buyer or seller if the need for further review is apparent.

The survey/questionnaire is kept with the property record card for future reference.

#### **For Pierce County**

#### **III. Measures of Central Tendency**

There are three measures of central tendency calculated by the Division: median ratio, weighted mean ratio, and mean ratio. Since each measure of central tendency has strengths and weaknesses, the use of any statistic for equalization should be reconciled with the other two, as in an appraisal, based on the appropriateness in the use of the statistic for a defined purpose, the quantity of the information from which it was drawn, and the reliability of the data that was used in its calculation. An examination of the three measures can serve to illustrate important trends in the data if the measures do not closely correlate to each other.

The IAAO considers the median ratio the most appropriate statistical measure for use in determining level of value for direct equalization; the process of adjusting the values of classes or subclasses of property in response to the determination of level of value at a point above or below a particular range. Since the median ratio is considered neutral in relationship to either assessed value or selling price, its use in adjusting the class or subclass of properties will not change the relationships between assessed value and level of value already present within the class or subclass of properties, thus rendering an adjustment neutral in its impact on the relative tax burden to an individual property. Additionally, the median ratio is less influenced by the presence of extreme ratios, commonly called outliers. One outlier in a small sample size of sales can have controlling influence over the other measures of central tendency. The median ratio limits the distortion potential of an outlier.

The weighted mean ratio is viewed by the IAAO as the most appropriate statistical measure for indirect equalization. The weighted mean, because it is a value weighted ratio, best reflects a comparison of the assessed and market value of property in the political subdivision. If the distribution of aid to political subdivisions must relate to the market value available for assessment in the political subdivision, the measurement of central tendency used to analyze level of value should reflect the dollars of value available to be assessed. The weighted mean ratio does that more than either of the other measures of central tendency.

If the weighted mean ratio, because of its dollar-weighting feature, is significantly different from the median ratio, it may be an indication of other problems with assessment proportionality. When this occurs, an evaluation of the county's assessment practices and procedures is appropriate to discover remedies to the situation.

The mean ratio is used as a basis for other statistical calculations, such as the price related differential and coefficient of variation. However, the mean ratio has limited application in the analysis of level of value because it assumes a normal distribution of the data set around the mean ratio with each ratio having the same impact on the calculation regardless of the assessed value or the selling price.

|                           | Median | Wgt.Mean | Mean |
|---------------------------|--------|----------|------|
| <b>R&amp;O Statistics</b> | 70     | 75       | 71   |

#### **For Pierce County**

#### IV. Analysis of Quality of Assessment

In analyzing the statistical data of assessment quality, there are two measures upon which assessment officials will primarily rely: the Coefficient of Dispersion (COD), and the Price Related Differential (PRD). Whether such statistics can be relied upon as meaningful for the population depends on whether the sample is representative.

The COD is commonly referred to as the index of assessment inequality. It is used to measure how closely the individual ratios are clustered around the median ratio and suggests the degree of uniformity or inaccuracy resulting in the assessments. The COD is computed by dividing the average deviation by the median ratio. For example, a COD of 20 means half of the ratios are 20 percent above or below the median. The closer the ratios are grouped around the median, the more equitable the assessment of property tends to be. Conversely, if the dispersion is quite large, there is a large spread in the ratios typically indicating a large spread around the median in the assessment of property, which results in an inequity in assessment and taxes. There is no range of acceptability stated in the Nebraska statutes for the COD measure. The International Association of Assessing Officers recommended ratio study performance standards are as follows:

Single-family residences: a COD of 15 percent or less.

For newer and fairly homogeneous areas: a COD of 10 or less.

Income-producing property: a COD of 20 or less, or in larger urban jurisdictions, 15 or less. Vacant land and other unimproved property, such as agricultural land: a COD of 20 or less.

Rural residential and seasonal properties: a COD of 20 or less.

Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), p. 246.

In unusually homogeneous types of property low CODs can be anticipated; however, in all other cases CODs less than 5 percent may be indicative of non-representative samples or the selective reappraisal of sold parcels.

The PRD, also known as the index of regression, is a measurement of the relationship between the ratios of high-value and low-value properties to determine if the value of property has any influence on the assessment ratio. It is calculated by dividing the arithmetic mean ratio by the weighted mean ratio. The PRD provides an indicator of the degree to which high-value properties are over-assessed or under-assessed in relation to low-value properties. A PRD of 100 indicates there is no bias in the assessment of high-value properties in comparison to low-value properties. A PRD greater than 100 indicates the assessments are regressive, which means low-value properties tend to have a higher assessment ratio than high-value properties. The result is the owner of a low-value property pays a greater amount of tax in relation to value than the owner of a high-value property. Conversely, a PRD less than 100 indicates that high-value properties are over assessed in relation to low-value properties.

There is no range of acceptability stated in the Nebraska statutes for the PRD measure. The Standard of Ratio Studies, adopted by the International Association of Assessing Officers, July, 2007, recommends that the PRD should lie between 98 and 103. This range is centered slightly above 100 to allow for a slightly upward measurement bias inherent in the PRD.

The PRD is calculated based on the selling price/assessed value in the sales file. This measure can be misleading if the dollar value of the records in the sales file is not proportionate to the dollar value of records in the population.

Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), p. 247.

The analysis in this section displays the calculated COD and PRD measures for Pierce County, which are considered as one part of the analysis of the County's assessment practices.

## PIERCE COUNTY 3-YEAR PLAN

June 15, 2009

#### **COUNTY DESCRIPTION**

Per the 2009 County Abstract, Pierce County consists of the following real property types:

|              | Parcel/                 | %      |               | %      |               |               |
|--------------|-------------------------|--------|---------------|--------|---------------|---------------|
|              | Acre Count              | Parcel | Total Value   | Value  | Land Only     | Improvements  |
| Residential  | 2813                    | 46.02% | \$173,726,036 | 21.41% | \$22,948,270  | \$150,777,766 |
| Recreation   | 1                       | 0.02%  | \$115,135     | 0.01%  | \$70,145      | \$44,990      |
| Commercial   | 405                     | 6.62%  | \$26,808,695  | 3.31%  | \$3,910,795   | \$22,897,900  |
| Industrial   | 1                       | 0.02%  | \$18,836,475  | 2.32%  | \$237,500     | \$18,598,975  |
| Agricultural | 2,893 /<br>\$342,370.66 | 47.32% | \$591,768,124 | 72.95% | \$526,136,940 | \$65,631,184  |
| Total        | 6,113                   | 100%   | \$811,254,465 | 100%   | \$553,303,650 | \$257,950,815 |

#### **BUDGET, STAFFING, & TRAINING**

#### **BUDGET**

|                            | OFFICE BUDGET | APPRAISAL BUDGET |
|----------------------------|---------------|------------------|
| 2006-2007 Requested Budget | \$138,952.90  | \$22,806.25      |
| 2006-2007 Adopted Budget   | \$129,572.60  | \$18,000.00      |
| 2007-2008 Requested Budget | \$133,258.11  | \$17,800.00      |
| 2007-2008 Adopted Budget   | \$133,258.11  | \$18,000.00      |
| 2008-2009 Requested Budget | \$138,665.00  | \$40,300.00      |
| 2008-2009 Adopted Budget   | \$138,665.00  | \$22,550.00      |
| 2009-2010 Requested Budget | \$140,935.00  | \$44,050.00      |

#### **STAFF**

- 1 Assessor
- 1 Deputy Assessor
- 3 Full-Time Clerks (7-Hour Day)

<u>NEW PROPERTY:</u> For assessment year 2009, there were 129 building permits filed for new property construction/additions in the county.

#### OTHER FUNCTIONS PERFORMED BY THE ASSESSOR'S OFFICE, BUT NOT LIMITED TO:

- 1. Record Maintenance, Splits, and Ownership changes
- 2. Annually prepare and file Assessor Administrative Reports required by law/regulation:
  - a. Abstracts (Real and Personal Property)
  - b. Assessor Survey
  - c. Sales information to PA&T rosters and annual Assessed Value Update w/Abstract
  - d. Certification of Value to Political Subdivisions
  - e. School District Taxable Value Report
  - f. Homestead Exemption Tax Loss Report (in conjunction with Treasurer)
  - g. Certificate of Taxes Levied Report
  - h. Report of current values for properties owned by Board of Education Lands and Funds
  - i. Report of all Exempt Property and Taxable Government Owned Property
  - i. Annual Plan of Assessment Report

- 3. Personal Property: administer annual filing of 1,093 schedules; prepare subsequent notices for incomplete filings or failure to file and penalties applied, as required.
- 4. Permissive Exemptions: administer annual filings of 188 applications for new or continued exempt use, review and make recommendations to county board.
- 5. Taxable Government Owned Property annual review of 30 government owned properties not used for public purpose, send notices of intent to tax, etc.
- 6. Homestead Exemptions: administer 375 annual filings of applications, approval/denial process, taxpayer notifications, and taxpayer assistance.
- 7. Centrally Assessed review of valuations as certified by PA&T for railroads and public service entities, establish assessment records and tax billing for tax list.
- 8. Tax Increment Financing management of record/valuation information for properties in community redevelopment projects for proper reporting on administrative reports and allocation of ad valorem tax.
- 9. Tax Districts and Tax Rates management of school district and other tax entity boundary changes necessary for correct assessment and tax information; input/review of tax rates used for tax billing process.
- 10. Tax Lists: prepare and certify tax lists to county treasurer for real property, personal property, and centrally assessed.
- 11. Tax List Corrections prepare tax list correction documents for county board approval.
- 12. County Board of Equalization attend county board of equalization meetings for valuation protests assemble and provide information.
- 13. TERC Appeals prepare information and attend taxpayer appeal hearings before TERC, defend valuation.
- 14. TERC Statewide Equalization attend hearings if applicable to county, defend values, and/or implements orders of the TERC.
- 15. Education: Assessor and/or Appraisal Education attend meetings, workshops, and educational classes to obtain required hours of continuing education to maintain assessor certification. The current requirement is 60 hours of continuing education per four-year term.

#### CONTRACT APPRAISER

The contract appraiser's responsibilities are to inspect the properties assigned, verify the property record to determine if it is accurate (size, quality, condition, type of siding and roof, basement finish, etc.), take new pictures and place in the property record card, and review the sales of like properties and make recommendations of the values assigned to properties.

#### TRAINING

The assessor attended 101-Fundamentals of Real Property Appraisal at Kearney in May 2008. The assessor and deputy attended the 2008 County Assessor's Workshop at Grand Island in August 2008. The deputy and one office clerk attended Residential Quality, Condition and Effective Age Seminar at Wayne in September 2008. The assessor, deputy and three office clerks attended Terra Scan Training at Lincoln in March 2009. The assessor and deputy attended the County Board of Equalization Workshop at Kearney in May 2009.

#### **2009 R&O STATISTICS**

| PROPERTY CLASS          | <u>MEDIAN</u> | COD   | <u>PRD</u> |
|-------------------------|---------------|-------|------------|
| Residential             | 97.00         | 8.61  | 101.88     |
| Commercial              | 95.00         | 18.32 | 111.23     |
| Agricultural Unimproved | 70.00         | 23.88 | 108.03     |

#### 3 YEAR APPRAISAL PLAN

## 2010

#### Residential

Only pick up work and sales reviews are planned for this property class for 2010.

#### Commercial

This class of property was last appraised in 2002 by a contract appraiser. The county plans a reappraisal for implementation for 2010 (approximately 350 improved parcels). This will include a minimum of inspecting the exterior, taking new digital pictures, and comparing the record card with what is physically present to determine if the quality and condition reflect what is shown on the record file. If possible, an interior inspection will be preformed. Market analysis and pick up work will be scheduled also.

#### Agricultural

The only tasks required should be a market analysis of land and pick up work. We also plan to put on the new soil survey.

## <u> 2011</u>

#### Residential

The county plans to reappraise the towns of Pierce and Hadar for implementation in 2011 (800+parcels). These towns were last appraised in 2004 by a contract appraiser, and a subclass of houses has been revalued in Pierce for 2008 and 2009. Market analysis and pick up work will be scheduled for this year as well.

#### Commercial

Only pick up work and sales reviews are planned for this property class for 2011.

#### Agricultural

The only tasks required should be a market analysis of land and pick up work.

## <u>2012</u>

#### Residential

The county plans to reappraise the rural residential properties (540 improved parcels). They were last appraised in 2005, and a subclass of houses was revalued for 2008 and 2009. Market analysis and pick up work will be scheduled for this year as well.

#### Commercial

Only pick up work and sales reviews are planned for this property class for 2011

#### Agricultural

The only tasks required should be a market analysis of land and pick up work.

The following is a time line table to give and overview of accomplishments and the next three-year plan schedule.

| CLASS        | 2000   | 2001  | 2002  | 2003   | 2004   |
|--------------|--|---|---|--|--|
| RESIDENTIAL  | Reappraised rural residential.   | Reappraised<br>Osmond<br>residential.                               | Appraisal maintenance.  | Reappraised Plainview, Foster, McLean, Breslau, and West Randolph. | Reappraised<br>Pierce and<br>Hadar.  |
| COMMERCIAL   | Appraisal maintenance.   | Appraisal maintenance.  | Reappraised all commercial properties.  | Appraisal maintenance.   | Appraisal maintenance.   |

The above information is intended to demonstrate the need for the following requested 2009-2010 budgets:

\$ 140,935.00 \$ 44,050.00 Office Budget Appraisal Budget

Respectfully submitted -

Peggy Wragge Pierce County Assessor

# ADDENDUM TO PIERCE COUNTY 3-YEAR PLAN

On June 9, 2008 the county board met with all of the county officials to discuss 2008-2009 budgets. They asked that each county official try to limit the increase in their office budget to 2% over the budget from the previous year. According to our 3-Year Plan we were scheduled to reappraise all of the commercial property in the county for 2009. After contacting appraisers who were qualified to reappraise commercial property, there was only one who would be able to complete the work for implementation for 2009. That bid would raise the reappraisal budget approximately 223%, and that is the amount I put for my estimation for the reappraisal budget. Since the commercial revaluation increased the reappraisal budget so much, and a residential reappraisal of Plainview, Foster, McLean, Breslau and West Randolph was the next scheduled review on the 3-Year Plan, I also contacted an appraiser for a bid on that project. The cost of that project would increase the reappraisal budget approximately 25% over the budget from the previous year.

I presented each county commissioner a copy of the 3-Year plan on July 14, 2008, at the county board meeting. I was called in for a budget hearing later that day, and they questioned the increase in the reappraisal budget, and expressed concern with that much of an increase. I reviewed the 3-Year Plan with them, and told them about the bid for the residential reappraisal of Plainview, Foster, McLean, Breslau and West Randolph. They felt that increase would be more acceptable, so I offered to go with that project for 2009, and attempt to do the commercial reappraisal for 2010. I felt that working with the county board would be better than arguing with them, yet emphasized the importance of getting the commercial reappraisal done as soon as possible.

The estimated general budget showed an increase of 4% over the budget from the previous year. The county board didn't seem to have a problem with that, so adopted an Office Budget of \$138, 665.00 and Appraisal Budget of \$22,550 for 2008-2009.

The assessor office staff will handle the pick-up work for the county and data entry for the pick-up work as well as Plainview, Foster, McLean, Breslau and West Randolph. We will also attempt to set the values for the homes and improvements on agricultural records (1,100+ parcels) for 2009.
