# 2013 Opinions of the Property Tax Administrator for Holt County

My opinions and recommendations are stated as a conclusion based on all of the factors known to me regarding the assessment practices and statistical analysis for this county. See, Neb. Rev. Stat. § 77-5027 (2011). While the median assessment sales ratio from the Qualified Statistical Reports for each class of real property is considered, my opinion of the level of value for a class of real property may be determined from other evidence contained within these Reports and Opinions of the Property Tax Administrator. My opinion of quality of assessment for a class of real property may be influenced by the assessment practices of the county assessor.

Class	Level of Value	Quality of Assessment	Non-binding recommendation
Residential Real Property	94	Meets generally accepted mass appraisal practices.	No recommendation.
Commercial Real Property	97	Meets generally accepted mass appraisal practices.	No recommendation.
Agricultural Land	73	Meets generally accepted mass appraisal practices.	No recommendation.

<sup>\*\*</sup>A level of value displayed as NEI (not enough information) represents a class of property with insufficient information to determine a level of value.

Dated this 5th day of April, 2013.

PROPERTY TAX ADMINISTRATOR ADMINISTRATOR

Ruth A. Sorensen

Ruch a. Sorensen

## 2013 Residential Assessment Actions for Holt County

For assessment year 2013 all residential sales were reviewed through a sales questionnaire. Returned questionnaires were gone through to gather as much information about the sale as possible. A physical review of the property was performed if there was still a question regarding the sale after the receipt of the questionnaire.

A new depreciation study along with updated Marshall-Swift costing was completed for valuation grouping 2 which is Atkinson and placed on the assessment roll.

All pickup work was completed and placed on the 2013 assessment roll.

## **2013** Residential Assessment Survey for Holt County

1.	Valuation d	lata collection done by:
	Assessor and	•
2.	List the val	uation groupings recognized by the County and describe the unique
	characteris	tics of each:
	Valuation	Description of unique characteristics
	Grouping	
	01	O'Neill- all improved and unimproved properties located within the City of O'Neill. Population of approximately 3,733. Public school as well as a Catholic school. The town offers a variety of jobs, services and goods.
	02	Atkinson- all improved and unimproved properties located within the Village of Atkinson. Population of approximately 1,550, public school, variety of jobs, services and goods. Located on the junction of HWY's 20 & 11.
	03	Stuart- all improved and unimproved properties located within the Village of Stuart. Population of approximately 625. Economic Development Corporation has bought several of the older houses, removed the improvements and resells the vacant lot. Nursing Home and assisted living, grocery store, gas station, lumberyard, bank, café, butcher shop, furniture store, insurance agency, and a six unit motel.
	04	Ewing- all improved and unimproved properties located within the Village of Ewing. Population of approximately 422. Public school, grocery store, bar, post office, bank, feed stores, electrician shop, gas station, 4 unit motel.
	05	Page- all improved and unimproved properties located within the Village of Page. Population of approximately 157. Café/Bar, bank, clinic, feed & trailer store, Coop, electrician shop.
	06	Chambers- all improved and unimproved properties located within the Village of Chambers. Population of approximately 333, public school, Coop/Gas Station, grocery store, bank, mechanic shop, bar, vet clinic, legion hall, church, feed store.
	07	Inman- all improved and unimproved properties located within the Village of Inman. Population of approximately 148. Post office, grocery store, bar, church.
	08	Emmet- all improved and unimproved properties located within the Village of Emmet. Population of approximately 97. Located on HWY 20 eight miles west of O'Neill. Post office, Coop, and hay company.
	09	Acreage - all improved and unimproved properties located outside the City limits in the rural areas as well as Amelia.

3.	List and describe the approach(es) used to estimate the market value of residential properties.
	The Cost Approach is used as well as a market analysis of the qualified sales to
	estimate the market value of properties.
4	What is the costing year of the cost approach being used for each valuation
	grouping?
	2002 for each valuation grouping with exception to Atkinson which is on 2011.
5.	If the cost approach is used, does the County develop the depreciation
	study(ies) based on local market information or does the county use the tables
	provided by the CAMA vendor?
	The county uses the depreciation tables provided by their CAMA vendor for all
	valuation groupings with exception to Atkinson which has their own schedule.
6.	Are individual depreciation tables developed for each valuation grouping?
	At this time the valuation grouping of Atkinson has an individual depreciation table.
	All other valuation groupings are on the same table.
7.	When were the depreciation tables last updated for each valuation grouping?
	2012 for Atkinson, 2001 for all other valuation groupings.
8.	When was the last lot value study completed for each valuation grouping?
	2012 for Atkinson, 2001 for all other valuation groupings.
9.	Describe the methodology used to determine the residential lot values?
	The lot values were established by completing a vacant lot sales study using a price
	per square foot analysis.

#### A. Residential Real Property

Holt County is located in north central Nebraska and has three Hwy's passing through the county. Hwy's 11 and 281 go north and south and Hwy 275/20 runs east and west. O'Neill is the largest town and is the county seat with a population of 3,705 based on the 2010 census. Atkinson, Stuart, Ewing and Chambers are the other towns in the county. They all have various types of services, goods and jobs.

The Holt County assessor is going into his third year of the term. A plan has been developed and submitted to the Department to physically inspect and review all properties within the six-year inspection cycle.

All residential sales are reviewed to determine if they are arms length transactions by sending questionnaires to the seller and buyer to gather as much information about the sale as possible. A phone call as well as a physical review of the property is performed if there was still a question regarding the sale after the receipt of the questionnaire. This past year the Property Assessment Division conducted a review of the county sales qualifications by going through the non-qualified sales roster. This also included reviewing any sales verification documentation the assessor had on file. After completing this review, the Division is confident that all available arms' length transactions were available for use in the measurement of real property within the county.

In 2011 the Division implemented an expanded review of one-third of the counties within the state to review assessment practices. This is scheduled to be completed in Holt County in 2013.

The residential sales file for Holt County consists of 224 qualified sales. This sample will be considered adequate and reliable for the measurement of the residential class of property. The median measure is within the range while the weighted mean is just below by one point. The mean can be attributed to outliers. All valuation groupings that are adequately represented in the sales file are within the acceptable range. The coefficient of dispersion and the price related differential are both above the acceptable ranges for quality of assessment. However, these measures are being affected by low dollar sales. If one is to look at the residential statistics under the sale price subclass, incremental ranges you will see the sales that range from \$0 to \$4,999 have very high COD's and PRD's. As the prices go up the measures improve.

Based on the consideration of all available information, the level of value is determined to be 94% of market value for the residential class of property. There is no information available to believe that the residential class of property is not being treated in the most uniform and proportionate manner possible.

#### **B.** Analysis of Sales Verification

Neb. Rev. Stat. § 77-1327(2) (2011) provides that all sales are deemed to be arms length transactions unless determined to be otherwise under professionally accepted mass appraisal techniques. The county assessor is responsible for the qualification of the sales included in the state sales file.

The Standard on Ratio Studies, International Association of Assessing Officials (2010), indicates that excessive trimming (the arbitrary exclusion or adjustment of arms length transactions) may indicate an attempt to inappropriately exclude arms length transactions to create the appearance of a higher level of value and quality of assessment. The sales file, in a case of excess trimming, will fail to properly represent the level of value and quality of assessment of the population of real property.

The Nebraska Department of Revenue, Property Assessment Division (Division) frequently reviews the procedures used by the county assessor to qualify sales to ensure bias does not exist in judgments made. Arms length transactions should only be excluded when they compromise the reliability of the resulting statistics. In cases where a county assessor has disqualified sales without substantiation, the Division may include such sales in the ratio study.

#### C. Measures of Central Tendency

There are three measures of central tendency calculated by the Division: median ratio, weighted mean ratio, and mean ratio. Since each measure of central tendency has strengths and weaknesses, the use of any statistic for equalization should be reconciled with the other two, as in an appraisal, based on the appropriateness of the use of the statistic for a defined purpose, the quantity of the information from which it was drawn, and the reliability of the data that was used in its calculation. An examination of the three measures can serve to illustrate important trends in the data if the measures do not closely correlate to each other.

The International Association of Assessing Officers (IAAO) considers the median ratio the most appropriate statistical measure for use in determining level of value for direct equalization; the process of adjusting the values of classes or subclasses of property in response to the determination of level of value at a point above or below a particular range. Since the median ratio is considered neutral in relationship to either assessed value or selling price, its use in adjusting the class or subclass of properties will not change the relationships between assessed value and level of value already present within the class or subclass of properties, thus rendering an adjustment neutral in its impact on the relative tax burden to an individual property. Additionally, the median ratio is less influenced by the presence of extreme ratios, commonly called outliers. One outlier in a small sample size of sales can have controlling influence over the other measures of central tendency. The median ratio limits the distortion potential of an outlier.

The weighted mean ratio is viewed by the IAAO as the most appropriate statistical measure for indirect equalization. The weighted mean, because it is a value weighted ratio, best reflects a comparison of the assessed and market value of property in the political subdivision. If the distribution of aid to political subdivisions must relate to the market value available for assessment in the political subdivision, the measurement of central tendency used to analyze level of value should reflect the dollars of value available to be assessed. The weighted mean ratio does that more than either of the other measures of central tendency.

If the weighted mean ratio, because of its dollar-weighting feature, is significantly different from the median ratio, it may be an indication of other problems with assessment proportionality. When this occurs, an evaluation of the county's assessment practices and procedures is appropriate to discover remedies to the situation.

The mean ratio is used as a basis for other statistical calculations, such as the price related differential and coefficient of variation. However, the mean ratio has limited application in the analysis of level of value because it assumes a normal distribution of the data set around the mean ratio with each ratio having the same impact on the calculation regardless of the assessed value or the selling price.

#### D. Analysis of Quality of Assessment

In analyzing the statistical data of assessment quality, there are two measures upon which assessment officials will primarily rely: the Coefficient of Dispersion (COD), and the Price Related Differential (PRD). Whether such statistics can be relied upon as meaningful for the population depends on whether the sample is representative.

The COD is commonly referred to as the index of assessment inequality. It is used to measure how closely the individual ratios are clustered around the median ratio and suggests the degree of uniformity or inaccuracy resulting in the assessments. The COD is computed by dividing the average deviation by the median ratio. For example, a COD of 20 means half of the ratios are 20 percent above or below the median. The closer the ratios are grouped around the median, the more equitable the assessment of property tends to be. Conversely, if the dispersion is quite large, there is a large spread in the ratios typically indicating a large spread around the median in the assessment of property, which results in an inequity in assessment and taxes. There is no range of acceptability stated in the Nebraska statutes for the COD measure. The IAAO recommended ratio study performance standards are as follows:

Single-family residences: a COD of 15 percent or less.

For newer and fairly homogeneous areas: a COD of 10 or less.

Income-producing property: a COD of 20 or less, or in larger urban jurisdictions, 15 or less.

Vacant land and other unimproved property, such as agricultural land: a COD of 20 or less.

Rural residential and seasonal properties: a COD of 20 or less.

Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), p. 246.

In unusually homogeneous types of property low CODs can be anticipated; however, in all other cases CODs less than 5 percent may be indicative of non-representative samples or the selective reappraisal of sold parcels.

Note that as market activity changes or as the complexity of properties increases, the measures of variability usually increase, even though appraisal procedures may be equally valid. Standard on Ratio Studies—2010, International Association of Assessing Officers, (2010), p. 13.

The PRD, also known as the index of regression, is a measurement of the relationship between the ratios of high-value and low-value properties to determine if the value of property has any influence on the assessment ratio. It is calculated by dividing the arithmetic mean ratio by the weighted mean ratio. The PRD provides an indicator of the degree to which high-value properties are over-assessed or under-assessed in relation to low-value properties. A PRD of 100 indicates there is no bias in the assessment of high-value properties in comparison to low-value properties. A PRD greater than 100 indicates the assessments are regressive, which means low-value properties tend to have a higher assessment ratio than high-value properties. The result is the owner of a low-value property pays a greater amount of tax in relation to value than the owner of a high-value property. Conversely, a PRD less than 100 indicates that

County 45 - Page 18

high-value properties are over assessed in relation to low-value properties.

There is no range of acceptability stated in the Nebraska statutes for the PRD measure. The Standard on Ratio Studies, adopted by the International Association of Assessing Officers, January, 2010, recommends that the PRD should lie between 98 and 103. This range is centered slightly above 100 to allow for a slightly upward measurement bias inherent in the PRD.

The PRD is calculated based on the selling price/assessed value in the sales file. This measure can be misleading if the dollar value of the records in the sales file is not proportionate to the dollar value of records in the population.

Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), p. 239.

## **2013** Commercial Assessment Actions for Holt County

For assessment year 2013 all returned sales questionnaires were gone through to gather as much information about the sale as possible. A physical review of the property was performed if there was still a question regarding the sale after the receipt of the questionnaire.

No valuation changes were made to the commercial class of property other than sales review and pick up work.

## **2013** Commercial Assessment Survey for Holt County

1.	Valuation d	lata collection done by:
	Assessor and	· · · · · · · · · · · · · · · · · · ·
2.		uation groupings recognized in the County and describe the unique
		tics of each:
	<u>Valuation</u>	<u>Description of unique characteristics</u>
	Grouping	
	01	O'Neill- all improved and unimproved properties located within the City of O'Neill. Population of approximately 3,733. Public school as well as a Catholic school. The town offers a variety of jobs, services and goods.
	02	Atkinson- all improved and unimproved properties located within the Village of Atkinson. Population of approximately 1,244, public school, variety of jobs, services and goods. Located on the junction of HWY's 20 & 11.
	03	Stuart- all improved and unimproved properties located within the Village of Stuart. Population of approximately 625. Economic Development Corporation has bought several of the older houses, removed the improvements and resells the vacant lot. Nursing Home and assisted living, grocery store, gas station, lumberyard, bank, café, butcher shop, furniture store, insurance agency, and a six unit motel.
	04	Ewing- all improved and unimproved properties located within the Village of Ewing. Population of approximately 422. Public school, grocery store, bar, post office, bank, feed stores, electrician shop, gas station, 4 unit motel.
	05	Page- all improved and unimproved properties located within the Village of Page. Population of approximately 157. Café/Bar, bank, clinic, feed & trailer store, Coop, electrician shop.
	06	Chambers- all improved and unimproved properties located within the Village of Chambers. Population of approximately 333, public school, Coop/Gas Station, grocery store, bank, mechanic shop, bar, vet clinic, legion hall, church, feed store.
	07	Inman- all improved and unimproved properties located within the Village of Inman. Population of approximately 148. Post office, grocery store, bar, church.
	08	Emmet- all improved and unimproved properties located within the Village of Emmet. Population of approximately 97. Located on HWY 20 eight miles west of O'Neill. Post office, Coop, and hay company.
	09	Acreage - all improved and unimproved properties located outside the City limits in the rural areas as well as Amelia.

3.	List and describe the approach(es) used to estimate the market value of commercial properties.
	The Cost Approach is used as well as a market analysis of the qualified sales to
	estimate the market value of properties.
3a.	Describe the process used to determine the value of unique commercial
	properties.
	At this time the new assessor hasn't had any unique properties to value. When the
	situation arises similar properties in surrounding counties would be used as comparables as well as properties statewide.
4.	What is the costing year of the cost approach being used for each valuation
	grouping?
	2002
5.	If the cost approach is used, does the County develop the depreciation
	study(ies) based on local market information or does the county use the tables
	provided by the CAMA vendor?
	The county uses the depreciation tables provided by the CAMA vendor.
6.	Are individual depreciation tables developed for each valuation grouping?
	Not at this time, however depreciation tables will be developed.
7.	When were the depreciation tables last updated for each valuation grouping?
	The last time the depreciation tables were updated was approximately 2004. The
	new assessor is developing a plan to update these within ever six years.
8.	When was the last lot value study completed for each valuation grouping?
	2002 for all valuation groupings.
9.	Describe the methodology used to determine the commercial lot values.
	The lot values were established by completing a vacant lot sales study using a price per square foot analysis.

#### A. Commercial Real Property

Holt County is located in north central Nebraska and has three Hwy's passing through the county. Hwy's 11 and 281 go north and south and Hwy 275/20 runs east and west. O'Neill is the largest town and is the county seat with a population of 3,705 based on the 2010 census. The majority of the commercial market is located in O'Neill. Atkinson, Stuart, Ewing and Chambers are the other towns in the county. They all have various types of services, goods and jobs.

The Holt County assessor is going into his third year of the term. A plan has been developed and submitted to the Department to physically inspect and review all properties within the six-year inspection cycle.

All commercial sales are reviewed to determine if they are arms length transactions by sending questionnaires to the seller and buyer to gather as much information about the sale as possible. A phone call as well as a physical review of the property is performed if there was still a question regarding the sale after the receipt of the questionnaire. This past year the Property Assessment Division conducted a review of the county sales qualifications by going through the non-qualified sales roster. This also included reviewing any sales verification documentation the assessor had on file. After completing this review, the Division is confident that all available arms' length transactions were available for use in the measurement of real property within the county.

In 2011 the Division implemented an expanded review of one-third of the counties within the state to review assessment practices. This is scheduled to be completed in Holt County in 2013.

A review of the statistical analysis reveals 41 qualified commercial sales in the three year study period. This will be considered an adequate and reliable sample for the measurement of the commercial class of real property in Holt County. The calculated median is 97%.

Based on the consideration of all available information, the level of value is determined to be 97% of market value for the commercial class of real property. There is no information available to believe that the commercial class of property is not being treated in the most uniform and proportionate manner possible.

#### **B.** Analysis of Sales Verification

Neb. Rev. Stat. § 77-1327(2) (2011) provides that all sales are deemed to be arms length transactions unless determined to be otherwise under professionally accepted mass appraisal techniques. The county assessor is responsible for the qualification of the sales included in the state sales file.

The Standard on Ratio Studies, International Association of Assessing Officials (2010), indicates that excessive trimming (the arbitrary exclusion or adjustment of arms length transactions) may indicate an attempt to inappropriately exclude arms length transactions to create the appearance of a higher level of value and quality of assessment. The sales file, in a case of excess trimming, will fail to properly represent the level of value and quality of assessment of the population of real property.

The Nebraska Department of Revenue, Property Assessment Division (Division) frequently reviews the procedures used by the county assessor to qualify sales to ensure bias does not exist in judgments made. Arms length transactions should only be excluded when they compromise the reliability of the resulting statistics. In cases where a county assessor has disqualified sales without substantiation, the Division may include such sales in the ratio study.

#### C. Measures of Central Tendency

There are three measures of central tendency calculated by the Division: median ratio, weighted mean ratio, and mean ratio. Since each measure of central tendency has strengths and weaknesses, the use of any statistic for equalization should be reconciled with the other two, as in an appraisal, based on the appropriateness of the use of the statistic for a defined purpose, the quantity of the information from which it was drawn, and the reliability of the data that was used in its calculation. An examination of the three measures can serve to illustrate important trends in the data if the measures do not closely correlate to each other.

The International Association of Assessing Officers (IAAO) considers the median ratio the most appropriate statistical measure for use in determining level of value for direct equalization; the process of adjusting the values of classes or subclasses of property in response to the determination of level of value at a point above or below a particular range. Since the median ratio is considered neutral in relationship to either assessed value or selling price, its use in adjusting the class or subclass of properties will not change the relationships between assessed value and level of value already present within the class or subclass of properties, thus rendering an adjustment neutral in its impact on the relative tax burden to an individual property. Additionally, the median ratio is less influenced by the presence of extreme ratios, commonly called outliers. One outlier in a small sample size of sales can have controlling influence over the other measures of central tendency. The median ratio limits the distortion potential of an outlier.

The weighted mean ratio is viewed by the IAAO as the most appropriate statistical measure for indirect equalization. The weighted mean, because it is a value weighted ratio, best reflects a comparison of the assessed and market value of property in the political subdivision. If the distribution of aid to political subdivisions must relate to the market value available for assessment in the political subdivision, the measurement of central tendency used to analyze level of value should reflect the dollars of value available to be assessed. The weighted mean ratio does that more than either of the other measures of central tendency.

If the weighted mean ratio, because of its dollar-weighting feature, is significantly different from the median ratio, it may be an indication of other problems with assessment proportionality. When this occurs, an evaluation of the county's assessment practices and procedures is appropriate to discover remedies to the situation.

The mean ratio is used as a basis for other statistical calculations, such as the price related differential and coefficient of variation. However, the mean ratio has limited application in the analysis of level of value because it assumes a normal distribution of the data set around the mean ratio with each ratio having the same impact on the calculation regardless of the assessed value or the selling price.

#### D. Analysis of Quality of Assessment

In analyzing the statistical data of assessment quality, there are two measures upon which assessment officials will primarily rely: the Coefficient of Dispersion (COD), and the Price Related Differential (PRD). Whether such statistics can be relied upon as meaningful for the population depends on whether the sample is representative.

The COD is commonly referred to as the index of assessment inequality. It is used to measure how closely the individual ratios are clustered around the median ratio and suggests the degree of uniformity or inaccuracy resulting in the assessments. The COD is computed by dividing the average deviation by the median ratio. For example, a COD of 20 means half of the ratios are 20 percent above or below the median. The closer the ratios are grouped around the median, the more equitable the assessment of property tends to be. Conversely, if the dispersion is quite large, there is a large spread in the ratios typically indicating a large spread around the median in the assessment of property, which results in an inequity in assessment and taxes. There is no range of acceptability stated in the Nebraska statutes for the COD measure. The IAAO recommended ratio study performance standards are as follows:

Single-family residences: a COD of 15 percent or less.

For newer and fairly homogeneous areas: a COD of 10 or less.

Income-producing property: a COD of 20 or less, or in larger urban jurisdictions, 15 or less.

Vacant land and other unimproved property, such as agricultural land: a COD of 20 or less.

Rural residential and seasonal properties: a COD of 20 or less.

Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), p. 246.

In unusually homogeneous types of property low CODs can be anticipated; however, in all other cases CODs less than 5 percent may be indicative of non-representative samples or the selective reappraisal of sold parcels.

Note that as market activity changes or as the complexity of properties increases, the measures of variability usually increase, even though appraisal procedures may be equally valid. Standard on Ratio Studies—2010, International Association of Assessing Officers, (2010), p. 13.

The PRD, also known as the index of regression, is a measurement of the relationship between the ratios of high-value and low-value properties to determine if the value of property has any influence on the assessment ratio. It is calculated by dividing the arithmetic mean ratio by the weighted mean ratio. The PRD provides an indicator of the degree to which high-value properties are over-assessed or under-assessed in relation to low-value properties. A PRD of 100 indicates there is no bias in the assessment of high-value properties in comparison to low-value properties. A PRD greater than 100 indicates the assessments are regressive, which means low-value properties tend to have a higher assessment ratio than high-value properties. The result is the owner of a low-value property pays a greater amount of tax in relation to value than the owner of a high-value property. Conversely, a PRD less than 100 indicates that

County 45 - Page 31

high-value properties are over assessed in relation to low-value properties.

There is no range of acceptability stated in the Nebraska statutes for the PRD measure. The Standard on Ratio Studies, adopted by the International Association of Assessing Officers, January, 2010, recommends that the PRD should lie between 98 and 103. This range is centered slightly above 100 to allow for a slightly upward measurement bias inherent in the PRD.

The PRD is calculated based on the selling price/assessed value in the sales file. This measure can be misleading if the dollar value of the records in the sales file is not proportionate to the dollar value of records in the population.

Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), p. 239.

### 2013 Agricultural Assessment Actions for Holt County

The assessor performed a market analysis on all qualified agricultural sales. Based on the analysis it was determined that changes in land valuation would be made to land capability groups in all classes. Through this analysis the assessor also redrew the market area lines. The county is now divided into two different areas. North of Hwy 20 and the Elkhorn River is market area 4001 which contains the majority of irrigated land. South of Hwy 20 and the Elkhorn River is market area 4003. Here the water table is much higher than the other area making it harder to irrigate. Dry and grass land values county wide are still valued the same, the only difference in value is in irrigated.

All qualified sales are plotted on a map within the assessor's office. This is beneficial to both the assessor as well as the public.

All agricultural sales are reviewed by sending questionnaires to the seller and buyer to gather as much information about the sale as possible. A physical review of the property was performed if there is still a question regarding the sale after the receipt of the questionnaire.

Work is continuing with the implementation of GIS. The irrigated acres from GIS will be rolled over for 2013.

Pickup work was completed and placed on the 2013 assessment roll.

## **2013** Agricultural Assessment Survey for Holt County

1.	Valuation data	collection done by:										
	Assessor and D	eputy										
2.	List each mark make each unio	tet area, and describe the location and the specific characteristics that que.										
	Market Area	Description of unique characteristics										
	4001	This market area consists of land on the north side of Hwy 20 and the										
		Elkhorn River. A small portion of the southeast corner of the county is										
		also included with this area. It contains a mix of excessively drained										
		sandy soils, well drained silty soils formed in loess and alluvium on										
	stream terraces, and well to somewhat excessively drained loamy soil.  The market area contains the majority of irrigated land.											
	4003	This market area consists of land on the south side of Hwy 20 and the										
	Elkhorn River, as well as a small portion of the northwest corner of the											
	county. The water table in this area is much higher than the other area making it harder to irrigate. It contains excessively drained sandy soils											
		formed in alluvium in valleys and eolian sand on uplands in sandhills.										
3.	Describe the n	rocess used to determine and monitor market areas.										
		reas are developed by similar topography, soil characteristics and										
		racteristics. A sale analysis is completed each year to monitor the market										
	areas.											
4.	Describe the p	rocess used to identify rural residential land and recreational land in										
		rt from agricultural land.										
		and directly associated with a residence, and is defined in Regulation										
		ecreational land is defined according to Regulation 10.001.05E. These

Source: 2013 Abstract of Assessment, Form 45, Schedule IX

#### A. Agricultural Land

Holt County is located in northern Nebraska with O'Neill being the county seat. The county is comprised of approximately 18% irrigated, 4% dry crop and 73% grass/pasture land. Holt County has two market areas. Market area 4001 consists of land on the north side of Hwy 20 and the Elkhorn River. A small portion of the southeast corner of the county is also included with this area. This market area contains the majority of irrigated land in the county. Market area 4003 consists of land on the south side of Hwy 20 and the Elkhorn River as well as a small portion of the northwest corner of the county. The water table in this area is much higher than the other area making it harder to irrigate. Overall, dry and grass land values county wide are valued the same, the only difference in value between the two market areas is in irrigated. Annually sales are reviewed and plotted to verify accuracy of the market area determinations.

The surrounding counties of Rock, Garfield, Wheeler, Antelope and western Knox are comparable where they adjoin Holt. Each share characteristics that is comparable in soils and topography. Two Natural Resource Districts split this county. The Lower Niobrara NRD governs the northern part of the county while the Upper Elkhorn NRD governs the southern portion. The Upper Elkhorn currently has a 2500 acre annual new well maximum.

In analyzing the agricultural sales within market area 4001 in Holt County the sales were not proportionately distributed among the study period years nor were the land uses representative of the county in general. In market area 4003 even though the land use of the sales generally matched the county as a whole the sales were not proportionately distributed among the study period years. Both samples were expanded using sales from the defined comparable areas as described above.

The resulting sample for market area 4003 that is now proportionately distributed and representative of the land uses suggests the values are within the acceptable range and is adequate for measurement purposes. The statistical profile also further breaks down subclasses of 95% and 80% majority land use. The 80% MLU provides the more representative sampling. The 80% MLU shows the irrigated subclass falls within the acceptable range. When looking at the same 80% MLU subclass for grass in area 4003 you will notice the median is slightly above the range. However, as stated above grass values County wide are valued the same so one should look at the overall 80% MLU for the county which has a median of 72.97%.

Despite the attempt to make it so, the thresholds for representativeness by land use in market area 4001 were not achieved, due to the over representation of irrigated land. The sample however does have a proportionate distribution of sales in the study period. The statistical profile further breaks down subclasses of 95% and 80% majority land use. The 80% MLU provides the more representative sampling. The 80% MLU shows the irrigated subclass falls within the acceptable range, while the dry land subclass with so few sales is unreliable for statistical inference. As stated above the overall 80% MLU of grass for the county falls within the acceptable range.

The overall statistics are a result of 196 total sales with 97 sales in area 4001 and 99 sales in area 4003. The statistical profile suggests that values are within the acceptable range as indicated by the overall median of 73%. Further, each market area is demonstrating that an acceptable level of value has been attained. A review of the neighboring counties shows the irrigated values in area 4001 are lower than Antelope, but higher than Rock area 3, Knox and Boyd counties. In area 4003 the irrigated values are similar to the neighboring counties that border this area. The dry and grass values in both market areas correlate similarly to the neighboring counties that adjoin these areas.

Based on knowledge of the assessment practices in Holt County and after consideration of surrounding counties' value it is determined that uniform and proportionate treatment exists within and across county lines. The overall median of 73% will be used in determining the level of value for the agricultural class of real property within Holt County.

#### **B.** Analysis of Sales Verification

Neb. Rev. Stat. § 77-1327(2) (2011) provides that all sales are deemed to be arms length transactions unless determined to be otherwise under professionally accepted mass appraisal techniques. The county assessor is responsible for the qualification of the sales included in the state sales file.

The Standard on Ratio Studies, International Association of Assessing Officials (2010), indicates that excessive trimming (the arbitrary exclusion or adjustment of arms length transactions) may indicate an attempt to inappropriately exclude arms length transactions to create the appearance of a higher level of value and quality of assessment. The sales file, in a case of excess trimming, will fail to properly represent the level of value and quality of assessment of the population of real property.

The Nebraska Department of Revenue, Property Assessment Division (Division) frequently reviews the procedures used by the county assessor to qualify sales to ensure bias does not exist in judgments made. Arms length transactions should only be excluded when they compromise the reliability of the resulting statistics. In cases where a county assessor has disqualified sales without substantiation, the Division may include such sales in the ratio study.

#### C. Measures of Central Tendency

There are three measures of central tendency calculated by the Division: median ratio, weighted mean ratio, and mean ratio. Since each measure of central tendency has strengths and weaknesses, the use of any statistic for equalization should be reconciled with the other two, as in an appraisal, based on the appropriateness of the use of the statistic for a defined purpose, the quantity of the information from which it was drawn, and the reliability of the data that was used in its calculation. An examination of the three measures can serve to illustrate important trends in the data if the measures do not closely correlate to each other.

The International Association of Assessing Officers (IAAO) considers the median ratio the most appropriate statistical measure for use in determining level of value for direct equalization; the process of adjusting the values of classes or subclasses of property in response to the determination of level of value at a point above or below a particular range. Since the median ratio is considered neutral in relationship to either assessed value or selling price, its use in adjusting the class or subclass of properties will not change the relationships between assessed value and level of value already present within the class or subclass of properties, thus rendering an adjustment neutral in its impact on the relative tax burden to an individual property. Additionally, the median ratio is less influenced by the presence of extreme ratios, commonly called outliers. One outlier in a small sample size of sales can have controlling influence over the other measures of central tendency. The median ratio limits the distortion potential of an outlier.

The weighted mean ratio is viewed by the IAAO as the most appropriate statistical measure for indirect equalization. The weighted mean, because it is a value weighted ratio, best reflects a comparison of the assessed and market value of property in the political subdivision. If the distribution of aid to political subdivisions must relate to the market value available for assessment in the political subdivision, the measurement of central tendency used to analyze level of value should reflect the dollars of value available to be assessed. The weighted mean ratio does that more than either of the other measures of central tendency.

If the weighted mean ratio, because of its dollar-weighting feature, is significantly different from the median ratio, it may be an indication of other problems with assessment proportionality. When this occurs, an evaluation of the county's assessment practices and procedures is appropriate to discover remedies to the situation.

The mean ratio is used as a basis for other statistical calculations, such as the price related differential and coefficient of variation. However, the mean ratio has limited application in the analysis of level of value because it assumes a normal distribution of the data set around the mean ratio with each ratio having the same impact on the calculation regardless of the assessed value or the selling price.

#### D. Analysis of Quality of Assessment

In analyzing the statistical data of assessment quality, there are two measures upon which assessment officials will primarily rely: the Coefficient of Dispersion (COD), and the Price Related Differential (PRD). Whether such statistics can be relied upon as meaningful for the population depends on whether the sample is representative.

The COD is commonly referred to as the index of assessment inequality. It is used to measure how closely the individual ratios are clustered around the median ratio and suggests the degree of uniformity or inaccuracy resulting in the assessments. The COD is computed by dividing the average deviation by the median ratio. For example, a COD of 20 means half of the ratios are 20 percent above or below the median. The closer the ratios are grouped around the median, the more equitable the assessment of property tends to be. Conversely, if the dispersion is quite large, there is a large spread in the ratios typically indicating a large spread around the median in the assessment of property, which results in an inequity in assessment and taxes. There is no range of acceptability stated in the Nebraska statutes for the COD measure. The IAAO recommended ratio study performance standards are as follows:

Single-family residences: a COD of 15 percent or less.

For newer and fairly homogeneous areas: a COD of 10 or less.

Income-producing property: a COD of 20 or less, or in larger urban jurisdictions, 15 or less.

Vacant land and other unimproved property, such as agricultural land: a COD of 20 or less.

Rural residential and seasonal properties: a COD of 20 or less.

Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), p. 246.

In unusually homogeneous types of property low CODs can be anticipated; however, in all other cases CODs less than 5 percent may be indicative of non-representative samples or the selective reappraisal of sold parcels.

Note that as market activity changes or as the complexity of properties increases, the measures of variability usually increase, even though appraisal procedures may be equally valid. Standard on Ratio Studies—2010, International Association of Assessing Officers, (2010), p. 13.

The PRD, also known as the index of regression, is a measurement of the relationship between the ratios of high-value and low-value properties to determine if the value of property has any influence on the assessment ratio. It is calculated by dividing the arithmetic mean ratio by the weighted mean ratio. The PRD provides an indicator of the degree to which high-value properties are over-assessed or under-assessed in relation to low-value properties. A PRD of 100 indicates there is no bias in the assessment of high-value properties in comparison to low-value properties. A PRD greater than 100 indicates the assessments are regressive, which means low-value properties tend to have a higher assessment ratio than high-value properties. The result is the owner of a low-value property pays a greater amount of tax in relation to value than the owner of a high-value property. Conversely, a PRD less than 100 indicates that

County 45 - Page 44

high-value properties are over assessed in relation to low-value properties.

There is no range of acceptability stated in the Nebraska statutes for the PRD measure. The Standard on Ratio Studies, adopted by the International Association of Assessing Officers, January, 2010, recommends that the PRD should lie between 98 and 103. This range is centered slightly above 100 to allow for a slightly upward measurement bias inherent in the PRD.

The PRD is calculated based on the selling price/assessed value in the sales file. This measure can be misleading if the dollar value of the records in the sales file is not proportionate to the dollar value of records in the population.

Mass Appraisal of Real Property, International Association of Assessing Officers, (1999), p. 239.

#### PLAN OF ASSESSMENT HOLT COUNTY

Pursuant to section 77-1311 of the statutes of Nebraska, as amended, submitted herewith is the 3-year Plan of Assessment. Said plan is originally submitted to the county board of equalization on or before July 31 of each year and a copy sent to the Department of Property Assessment and Taxation on or before October 31 each year.

Holt County has a total count of 12,180 taxable parcels, being further identified as: 36% (4,398) residential parcels; 6% (755) commercial/industrial parcels; and 58% (7,027) agricultural parcels. There are also 412 exempt parcels.

For 2012, 2,444 personal property schedules were filed, plus, approximately 575 applications were taken for homestead exemptions. Applications for exemption and/or affidavits for continuing exemption are received annually. For 2012, affidavits were filed by 64 organizations, plus two new applications.

Staff for the office consists of the elected assessor, one deputy, and three full-time clerks, although one is shared seasonally with the treasurer's office. Maintenance of property record cards is performed by any staff member. Changes due to transfer are primarily completed by either the assessor or one of the clerks. Personal property filings are managed by the assessor, the deputy or another of the clerks. The third clerk assists with maintaining computer files of real property, plus wherever else needed. Reports required are prepared by the assessor with assistance of all personnel.

The budget requested for 2012-13 is \$208,583. The CAMA portion within the appraisal maintenance includes a cost of about \$17,000. The GIS cost is 12,700.

The assessor anticipates attending the 2012 Workshop, which offers continuing education for maintaining the Assessor's certificate. The assessor, deputy and a clerk plan to obtain additional hours toward renewal of their assessor certificates.

Cadastral maps are maintained by the assessor and the clerk processing the transfer statements. Photo background of the cadastral maps is 1966. Ownership and descriptions are kept current by the assessor and said clerk. A contract has been entered into with GIS Workshop for conversion to the new soil survey and continuing data maintenance and retention.

Reports are generated as follows:

- Real Estate Abstract is to be submitted on or before March 19.
- The Personal Property Abstract is to be submitted on or before June 15.
- A report on the review of ownership and use of all cemetery real property is to be presented to the county board of equalization on or before August 1.
- Certificates of value for taxing authorities are to be submitted on or before August 20.
- School District Taxable Value Report is to be submitted on or before August 25.

- The Plan of Assessment is to be submitted on or before July 31.
- The report of the average assessed value of single-family residential properties is to be reported on or before September 1.
- A list of trusts owning agricultural land is certified to the Nebraska Secretary of State by October 1.
- The Tax Roll is to be delivered to the County Treasurer by November 22, along with tax bills.
- Homestead Exemption Tax Loss is to be certified on or before November 30.
- The Certificate of Taxes Levied is to be submitted on or before December 1.

Tax List Corrections are periodically submitted to the County Board of Equalization for approval, showing reasons for said corrections. Meetings of the County Board of Equalization are attended by the County Assessor, or his/her representative.

Notice is published in local newspapers that a list of the applications from organizations seeking tax exemption, descriptions of the property, and the recommendation of the county assessor is available in the county assessor's office. Said notice is published at least ten days prior to consideration of the applications by the county board of equalization.

By March 1, governmental subdivisions are notified of the intent to tax property if not used for a public purpose, and the entity does not pay an in-lieu-of tax.

Property record cards contain all information required by Reg. 10-004, including legal description, property owner, classification codes and supporting documentation. New property record cards were obtained for residential properties for 2001, for commercial/industrial properties for 2002, and for agricultural properties for 2008.

Applications for Homestead Exemption are accepted February 1 through June 30, according to statute. Applications are mailed on or before April 1 to previous filers if applicants have not yet filed for that year. News releases and newspaper ads are prepared to alert property owners of the time period in which to file, and to summarize qualifications. Information guides prepared by the Department of Revenue are made available to the public. Approved Homestead Exemption applications are sent to the Department of Revenue by August 1.

Personal property schedules are to be filed by May 1 to be timely. In early April, ads are placed in the local newspapers and news releases given to the local radio to remind taxpayers of the filing deadline, the necessary documentation to submit, and of the penalties for not filing in a timely manner. Schedules filed after May 1 and before July 31 receive a 10% penalty. Filings after July 31 receive a 25% penalty. Schedules are pre-printed as soon after the first of the year as possible. Verification is achieved from depreciation worksheets and personal contacts with owners.

Real property is up-dated annually through pick-up work and maintenance. Pick-up work, done by the assessor or deputy, involves physical inspection of properties flagged

on computer records as having building permits or other information meriting attention. Lists of approved building permits are gathered from city clerks where permits are required. Improvement Information Statements are received where permits are not required. Personal observation by the staff also triggers flags for possible required changes.

On or before June 1, certification of the real estate assessment roll is made and published in the local newspapers. Also by that date, Notices of Valuation Change are mailed by first-class mail to owners of any real property that has changed in value from the previous year. By June 6, assessment/sales ratio statistics (as determined by the Tax Equalization and Review Commission) are mailed to media and posted in the Assessor's Office.

All residential property (urban, suburban, and rural) was re-appraised for 2001 under contract with High Plains Appraisal Service. New photos were taken and listings were verified and/or corrected, re-measuring where necessary. Properties are sketched into computer records. Costs are generated using CAMA of ASI, utilizing Marshall & Swift costs of June 2002. A depreciation study was made. For 2012, the median level of value for residential property is 94%. Subsequent sales need to be studied to determine trends and changes in the market.

State statute requires each parcel to be inspected once every six years. The assessor staff has started the process of reassessing the residential properties in Atkinson and Stuart. The plan is to complete this process by March 1, 2013. A depreciation study will be made. Current costs will be generated using Marshall and Swift. New pictures will be taken of each parcel. Lots values will be studied. A questionnaire was sent to each property owner in the community of Atkinson and Stuart. Questions about the condition of the house and specific items such as heating systems and basement information were included on the questionnaire also.

Commercial and industrial properties were re-appraised for 2002. New photos were taken, and improvements re-measured and inspected. Properties are sketched into computer records. Costs are generated using CAMA by ASI, utilizing Marshall & Swift costs of June 2002. A depreciation study was made. Income data was gathered where appropriate. The median level of assessment of commercial/industrial properties for 2012 is undetermined due to a lack of sales. Subsequent sales need to be studied to determine trends and changes in the market.

The median level of assessment of agricultural property for 2012 is 71%. In December of 2011 Deloit township was reinspected using GIS technology and physical inspection of parcels that needed to be inspected. In 2012 the process of reinspecting townships will begin.

I asked for an extension to the six year period. The State is asking if the six year inspection will be completed on time. I took office in the middle of the six year time frame. Nothing had been done before I came to this office. I have submitted a plan to the State outlining how we will inspect the county by 2015.

Properties will be inspected by the assessor and/or deputy using GIS technology, measurements confirmed and condition noted. Interior inspections are to be completed wherever possible. Appropriate sketches of improvements will be entered into computer records by the clerks, and improvements re-priced using CAMA. A depreciation study is to be completed.

Land use update will be completed by GIS. Holt County contracted with them to finish the information input process for Holt County. In 2013 the irrigated land use acre count will be based on GIS acre count. The total acre count will reflect deeded acres.

For 2012, any changes in land use observed in the 2011 review or by GIS land use acre count will be reflected in the Change of Valuation Notices.

Real estate transfer statements are filed in a timely manner. Completion of the supplemental data is by the assessor and the clerk who assists in maintaining cadastral records. Questionnaires are mailed to both the buyers and sellers of properties sold to assist the assessor in verifying sales. The response rate is approximately 66%.

Sales of residential, commercial and agricultural properties will be analyzed for any needed adjustments. Start the reassessment process for the community of Stuart. Strive to improve quality and uniformity in assessments of all properties.

For 2013, continue field work by the assessor and/or deputy on re-appraisal of farm improvements, as well as continuing the review process of each Township. Study sales for possible adjustments needed for residential or commercial properties. Adjust for changes in agricultural land use. Start the reassessment process for acreages.

For 2014, complete pick-up work. Adjust for changes in agricultural land use as required. Study sales for market-based changes of residential, commercial and agricultural properties. Continue on-site review of a portion of all properties to conclude in a six-year period. Mail Change of Valuation notices as appropriate.

Respectfully

Timothy L. Wallinger Holt County Assessor

July 25, 2012

## **2013** Assessment Survey for Holt County

### A. Staffing and Funding Information

1.	Deputy(ies) on staff:
	One
2.	Appraiser(s) on staff:
	One
3.	Other full-time employees:
	Three
4.	Other part-time employees:
	None
5.	Number of shared employees:
	One
6.	Assessor's requested budget for current fiscal year:
	\$208,600
7.	Adopted budget, or granted budget if different from above:
	Same as above
8.	Amount of the total assessor's budget set aside for appraisal work:
	\$3,500
9.	If appraisal/reappraisal budget is a separate levied fund, what is that amount:
	N/A
10.	Part of the assessor's budget that is dedicated to the computer system:
	\$17,000
11.	Amount of the assessor's budget set aside for education/workshops:
	\$2,000
12.	Other miscellaneous funds:
	None
13.	Amount of last year's assessor's budget not used:
	\$1,000

### **B.** Computer, Automation Information and GIS

1.	Administrative software:
	Thomson Reuters formally Terra Scan
2.	CAMA software:
	Thomson Reuters formally Terra Scan
3.	Are cadastral maps currently being used?
	Yes
4.	If so, who maintains the Cadastral Maps?
	Assessment Staff
5.	Does the county have GIS software?
	Yes

6.	Is GIS available to the public? If so, what is the web address?			
	Yes – <u>www.holt.gisworkshop.com</u>			
7.	Who maintains the GIS software and maps?			
	GIS Workshop			
8.	Personal Property software:			
	Thomson Reuters formally Terra Scan			

### **C. Zoning Information**

1.	Does the county have zoning?
	Yes
2.	If so, is the zoning countywide?
	Yes
3.	What municipalities in the county are zoned?
	Atkinson, Ewing, O'Neill, Stuart, Chambers and Page
4.	When was zoning implemented?
	1998

### **D.** Contracted Services

1.	Appraisal Services:
	None
2.	GIS Services:
	GIS Workshop
3.	Other services:
	None

## E. Appraisal /Listing Services

1.	Does the county employ outside help for appraisal or listing services?
	No
2.	If so, is the appraisal or listing service performed under contract?
	N/A
3.	What appraisal certifications or qualifications does the County require?
	N/A
4.	Have the existing contracts been approved by the PTA?
	N/A
5.	Does the appraisal or listing service providers establish assessed values for the
	county?
	N/A

## **2013** Certification for Holt County

This is to certify that the 2013 Reports and Opinions of the Property Tax Administrator have been sent to the following:

One copy by electronic transmission to the Tax Equalization and Review Commission.

One copy by electronic transmission to the Holt County Assessor.

Dated this 5th day of April, 2013.
