

2017 REPORTS AND OPINIONS OF THE PROPERTY TAX ADMINISTATOR

LOGAN COUNTY

April 7, 2017

Pete Ricketts, Governor

Commissioner Salmon:

The Property Tax Administrator has compiled the 2017 Reports and Opinions of the Property Tax Administrator for Logan County pursuant to Neb. Rev. Stat. § 77-5027. This Report and Opinion will inform the Tax Equalization and Review Commission of the level of value and quality of assessment for real property in Logan County.

The information contained within the County Reports of the Appendices was provided by the county assessor pursuant to Neb. Rev. Stat. § 77-1514.

For the Tax Commissioner

Sincerely,

Ruth A. Sorensen

Property Tax Administrator

Kuth a. Sorensen

402-471-5962

cc: Debbie Myers, Logan County Assessor

Introduction

Neb. Rev. Stat. § 77-5027 provides that the Property Tax Administrator (PTA) shall prepare and deliver an annual Reports and Opinions (R&O) document to each county and to the Tax Equalization and Review Commission (Commission). This will contain statistical and narrative reports informing the Commission of the certified opinion of the PTA regarding the level of value and the quality of assessment of the classes and subclasses of real property within each county. In addition to an opinion of the level of value and quality of assessment in the county, the PTA may make nonbinding recommendations for subclass adjustments for consideration by the Commission.

The statistical and narrative reports contained in the R&O of the PTA provide an analysis of the assessment process implemented by each county to reach the levels of value and quality of assessment required by Nebraska law. The PTA's opinion of the level of value and quality of assessment in each county is a conclusion based upon all the data provided by the county assessor and gathered by the Nebraska Department of Revenue, Property Assessment Division (Division) regarding the assessment activities in the county during the preceding year.

The statistical reports are developed using the state-wide sales file that contains all arm's-length transactions as required by Neb. Rev. Stat. § 77-1327. From this sale file, the Division prepares a statistical analysis comparing assessments to sale prices. After determining if the sales represent the class or subclass of properties being measured, inferences are drawn regarding the assessment level and quality of assessment of the class or subclass being evaluated. The statistical reports contained in the R&O are developed based on standards developed by the International Association of Assessing Officers (IAAO).

The analysis of assessment practices in each county is necessary to give proper context to the statistical inferences from the assessment sales ratio studies and the overall quality of assessment in the county. The assessment practices are evaluated in the county to ensure professionally accepted mass appraisal methods are used and that those methods will generally produce uniform and proportionate valuations.

The PTA considers the statistical reports and the analysis of assessment practices when forming conclusions on both the level of value and quality of assessment. The consideration of both the statistical indicators and assessment processes used to develop valuations is necessary to accurately determine the level of value and quality of assessment. Assessment practices that produce a biased sales file will generally produce a biased statistical indicator, which, on its face, would otherwise appear to be valid. Likewise, statistics produced on small, unrepresentative, or otherwise unreliable samples, may indicate issues with assessment uniformity and assessment level—however, a detailed review of the practices and valuation models may suggest otherwise. For these reasons, the detail of the Division's analysis is presented and contained within the correlation sections for Residential, Commercial, and Agricultural land.

Statistical Analysis:

In determining a point estimate of the level of value, the PTA considers three measures as indicators of the central tendency of assessment: the median ratio, weighted mean ratio, and mean ratio. The use and reliability of each measure is based on inherent strengths and weaknesses which are the quantity and quality of the information from which it was calculated and the defined scope of the analysis.

The median ratio is considered the most appropriate statistical measure to determine a level of value for direct equalization which is the process of adjusting the values of classes or subclasses of property in response to an unacceptable level. Since the median ratio is considered neutral in relationship to either assessed value or selling price, adjusting the class or subclass of properties based on the median measure will not change the relationships between assessed value and level of value already present in the class of property. Additionally, the median ratio is less influenced by the presence of extreme ratios, commonly called outliers, which can skew the outcome in the other measures.

The weighted mean ratio best reflects a comparison of the fully assessable valuation of a jurisdiction, by measuring the total assessed value against the total of selling prices. The weighted mean ratio can be heavily influenced by sales of large-dollar property with extreme ratios.

The mean ratio is used as a basis for other statistical calculations, such as the price related differential and coefficient of variation. As a simple average of the ratios the mean ratio has limited application in the analysis of the level of value because it assumes a normal distribution of the data set around the mean ratio with each ratio having the same impact on the calculation regardless of the assessed value or the selling price.

The quality of assessment relies in part on statistical indicators as well. If the weighted mean ratio, because of its dollar-weighting feature, is significantly different from the mean ratio, it may be an indication of disproportionate assessments. The coefficient produced by this calculation is referred to as the Price Related Differential (PRD) and measures the assessment level of lower-priced properties relative to the assessment level of higher-priced properties.

The Coefficient of Dispersion (COD) is a measure also used in the evaluation of assessment quality. The COD measures the average deviation from the median and is expressed as a percentage of the median. A COD of 15 percent indicates that half of the assessment ratios are expected to fall within 15 percent of the median. The closer the ratios are grouped around the median the more equitable the property assessments tend to be.

Pursuant to Neb. Rev. Stat. § 77-5023, the acceptable range is 69% to 75% of actual value for agricultural land and 92% to 100% for all other classes of real property.

Nebraska Statutes do not provide for a range of acceptability for the COD or PRD; however, the IAAO establishes the following range of acceptability:

Property Class	COD	<u>PRD</u>
Residential	.0515	.98-1.03
Newer Residential	.0510	.98-1.03
Commercial	.0520	.98-1.03
Agricultural Land	.0525	.98-1.03

Analysis of Assessment Practices:

The Division reviews assessment practices that ultimately affect the valuation of real property in each county. This review is done to ensure the reliability of the statistical analysis and to ensure professionally accepted methods are used in the county assessor's effort to establish uniform and proportionate valuations.

To ensure county assessors are submitting all Real Estate Transfer Statements, required for the development of the state sales file pursuant to Neb. Rev. Stat. § 77-1327, the Division audits a random sample from the county registers of deeds' records to confirm that the required sales have been submitted and reflect accurate information. The timeliness of the submission is also reviewed to ensure the sales file allows analysis of up-to-date information. The county's sales verification and qualification procedures are reviewed to ensure that sales are properly considered arm's-length transactions unless determined to be otherwise through the verification process. Proper sales verification practices ensure the statistical analysis is based on an unbiased sample of sales.

Valuation groupings and market areas are also examined to identify whether the areas being measured truly represent economic areas within the county. The measurement of economic areas is the method by which the Division ensures intra-county equalization exists. The progress of the county's six-year inspection cycle is documented to ensure compliance with Neb. Rev. Stat. § 77-1311.03 and also to confirm that all property is being uniformly listed and described for valuation purposes.

Valuation methodologies developed by the county assessor are reviewed for both appraisal logic and to ensure compliance with professionally accepted mass appraisal methods. Methods and sales used to develop lot values are also reviewed to ensure the land component of the valuation process is based on the local market, and agricultural outbuildings and sites are reviewed as well.

The comprehensive review of assessment practices is conducted throughout the year. Issues are presented to the county assessor for clarification. The county assessor can then work to implement corrective measures prior to establishing assessed values. The PTA's conclusion that assessment quality is either compliant or not compliant with professionally accepted mass appraisal methods is based on the totality of the assessment practices in the county.

^{*}Further information may be found in Exhibit 94

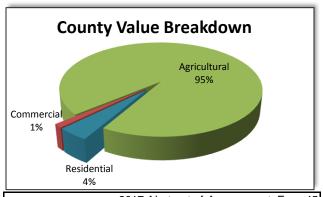

County Overview

With a total area of 571 miles, Logan had 777 residents, per the Census Bureau Quick Facts for 2015, reflecting 3% growth on 2014 and an overall population increase over the 2010 US Census of 2%. In a review of the past fifty-five years, Logan has seen a steady drop in population of 30% (Nebraska Department of Economic

Development). Reports indicated that 69% of county residents were homeowners and 86% of residents occupied the same residence as in the prior year (Census Quick Facts).

The majority of the commercial properties in Logan convene in and around the county seat of Stapleton. Per the latest information available from the U.S. Census Bureau, there were twenty-four employer establishments in Logan. Countywide employment was at 478, a 2% gain relative

	2006	2016	Change				
GANDY	30	32	7%				
STAPLETON	301	305	1%				

to the 2010 Census (Nebraska Department of Labor).

The agricultural economy has remained the strong anchor for Logan that has fortified the local rural area economies. Logan is included in the Upper Loup Natural Resources District (NRD). Grassland makes up the majority of the land in the county. Cattle Production is the primary agricultural activity in Logan.

2017 Residential Correlation for Logan County

Assessment Actions

The villages of Stapleton and Gandy were physically inspected for the 2017 assessment year as part of a reappraisal. New costing was applied and depreciation were created with the help of a contract appraiser.

Description of Analysis

There are no unique characteristics that have been recognized that would warrant more than one valuation grouping. The residential market does appear to be somewhat stable acknowledging the influences of the larger trade center to the south, North Platte.

The statistical sample consists of eleven sales evenly distributed between the two-year study period. All three measures of central tendency are closely related and within the acceptable range. The COD and PRD are also within the prescribed parameters. The statistics are reflective of the current revaluation of the property class; however, the size of the profile is too small to warrant definite reliance on the statistics as a measure of value.

The sales file and county's abstract of assessment reflect the reported assessment actions of a complete reappraisal. The sample changed at a slightly higher percentage compared to the residential class as a whole but this is to be expected with a small sample.

Assessment Practice Review

Annually a comprehensive review of the assessment practices is conducted for each county. The purpose of this review is to examine the assessment practices to determine whether the valuation processes result in the uniform and proportionate valuation of real property.

Multiple audits were conducted throughout the year to ensure the accuracy of that data being submitted to the sales file. The Real Estate Transfer Statements were randomly compared to data within the state sales file. A review was conducted of the assessed value updates against property record cards within the county. The electronic tracking file was also examined for timeliness of the submission of said data. It is believed that the county complies with submission timelines and that the sales information is being accurately reported.

One of the areas reviewed was the sales qualification and verification process of the county. The county assessor, as an ex-officio, is able to converse with individuals when documents are filed. The county assessor also sends out sales questionnaires to both the buyer and seller. A review of the non-qualified sales indicate that qualifications are well documented in the sales file. There does not appear to be a bias in the qualification determination.

2017 Residential Correlation for Logan County

The county's inspection and review cycle for all real property was discussed with the county assessor. The physical inspection for rural properties was completed for the 2016 assessment year and the villages were reviewed this year. The county is considered to be in compliance with the six year inspection and review cycle.

Equalization and Quality of Assessment

A review of assessment practices suggest that assessments within the county are uniformly assessed and considered to be equalized. The overall quality of assessment in the county is in compliance with professionally accepted mass appraisal standards.

VALUATION GROUPING						
RANGE	COUNT	MEDIAN	MEAN	WGT.MEAN	COD	PRD
01	11	94.80	96.29	95.25	09.07	101.09
ALL	11	94.80	96.29	95.25	09.07	101.09

Level of Value

Based on analysis of all available information, the level of value of the residential class in Logan County is determined to be at the statutory level of 100% of market value.

2017 Commercial Correlation for Logan County

Assessment Actions

A complete reappraisal was completed for the 2017 assessment year. Costing was updated and new depreciation was applied with the help of a contract appraisal firm.

Description of Analysis

For the commercial class, there are only thirty-seven improved commercial parcels countywide. The parcels are found in twelve different occupancy codes with most codes only having one or two parcels. The statistical sample contains only four qualified sales during the current study period and considered insufficient for a statistical analysis.

The review of the historical value changes show a 1% increase to the commercial class annually. This percentage increase is typical of the region and indicates that the commercial in Logan County is appreciating similar to surrounding counties. The 2017 County Abstract of Assessment compared to the 2016 Certificate of Taxes Levied show a percentage change reflective of a complete reappraisal of the commercial class.

Assessment Practice Review

Annually a comprehensive review of the assessment practices is conducted for each county. The purpose of this review is to examine the assessment practices to determine whether the valuation processes result in the uniform and proportionate valuation of real property.

Valuation groups were also examined to ensure that defining economic factors were recognized. There are few commercial parcels within the county and no unique economic forces, the county has only one valuation grouping for the commercial class.

The county's physical inspection and review cycle was also discussed with the county assessor. All commercial properties were inspected in 2016, which included new photos and physical inspection. New costing and depreciation were applied for the 2017 assessment year.

Equalization and Quality of Assessment

An insufficient sample of sales makes the statistics an unreliable indicator of the level of value. A review of the historical change in value compared to similar sized villages in close proximity indicate that the county has appreciated at similar rates. The assessment practices suggest that assessments within the county are uniformly assessed and are considered equalized. The overall quality of assessment in the county is considered in compliance with generally accepted mass appraisal standards.

2017 Commercial Correlation for Logan County

VALUATION GROUPING

01	4	115.60	123.62	94.58	29.94	130.70
ALL	4	115.60	123.62	94.58	29.94	130.70

Level of Value

Based on analysis of all available information, the level of value of the commercial class of real property in Logan County is determined to be at the statutory level of 100% of market value

2017 Agricultural Correlation for Logan County

Assessment Actions

A market analysis indicated that no change in valuation was needed for all three subclasses. The county has completed pick up work and the updated soil conversion in a timely manner.

Description of Analysis

The majority of Logan County is within the Nebraska Sand Hills Region. The Sand Hills is very homogenous and is characterized by rolling grass-stabilized sand dunes. The county is mainly comprised of Sand Hills grassland. The southeastern part of the county is transitional to the Loess Hills region to the south. The majority of the cropland resides in this southern most region.

The sample of the irrigated class remains small and unbalanced. Whereas this area is transitional, there is no true comparability with the surrounding counties. The overall trend of the irrigated market in region has been flat and stable. The values set by the county assessor transition well with the surrounding counties and are believed to be acceptable.

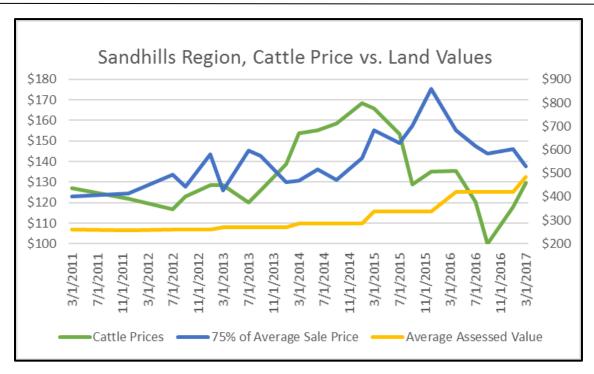

Over the last few years, counties located within the Sand Hills Region saw record high selling prices for grazing land. Several factors causing a cash influx to the region contributed to this unique economic situation.

The region as a whole, like much of the central plains, experienced an exceptional drought during 2012 into 2013. As a result of this drought, the 2014 Farm Bill provided relief through the Livestock Forage Disaster Program. This program retroactively covered losses from 2012 and 2013. Ranchers in Nebraska received the third most in relief, behind Texas and Oklahoma, an amount in excess of five hundred and thirty million dollars.

Around the same time disaster relief payments were issued, the cattle market was experiencing record high market prices. Together these dynamics created an economic bubble for a short period of time.

Most recently, with the subsidy payments gone and a weakened cattle market, the real estate market is indicating that land values have settled back down from the artificially inflated prices. Currently, the real estate market across the region relates more closely to prices prior to the influx of cash to the region. The study period contains an economic bubble that has since burst and the statistics within the study period are an unreliable indication of the current market value. Additional analysis was conducted looking outside of the study period to discern a true representation of market value. A copy of this analysis can be found in the addendum of this report. Since so few agricultural sales occur per county, an analysis of the region as a whole was conducted to expand and create a more reliable sample. The analysis clearly shows that the market for grassland has dropped twenty percentage points since the end of the study period. The Division's purpose for analyzing sales since the study period is not to achieve a more timely level of value, but rather to normalize a sample that was briefly influenced by market conditions that no longer exist.

2017 Agricultural Correlation for Logan County

While a large portion of the central Sand Hill's experienced the economic bubble described, those counties further west, including Arthur, Grant, Sheridan and Garden, where land is more strongly held were not affected by the temporary inflation of selling prices. The homogenous nature of the region has historically resulted in closely related values. Strict reliance on the sales within the study period would cause disequalization among Sand Hills counties, and would cause a temporary overassessment to the grass subclass.

Since the burst of the bubble, the market value of grassland has contracted and returned to the mean. Analysis indicates the average market value is between \$650-\$750 an acre for land. Values set by Logan County are assessed within the acceptable range.

Assessment Practice Review

Annually, a comprehensive review of assessment practices is conducted for each county. The purpose of the review is to examine practices of the county to determine whether valuation processes result in the uniform and proportionate valuation of real property.

The sales qualification and determination process of the county was examined as part of the review. This involved a review of the non-qualified sales to ensure that grounds for disqualifying the sales were substantiated and documented. The sales usability percentages within the county are considered to be acceptable and the county has been thorough in their documentation.

The physical inspection process was also discussed with the county assessor. The county finished the review of agricultural homes and improvements for the 2016 assessment year. Agricultural homes and site values are valued using the same depreciation model as the rural residential homes. The county hired a contract appraiser to assist in the valuation of these properties. New costing

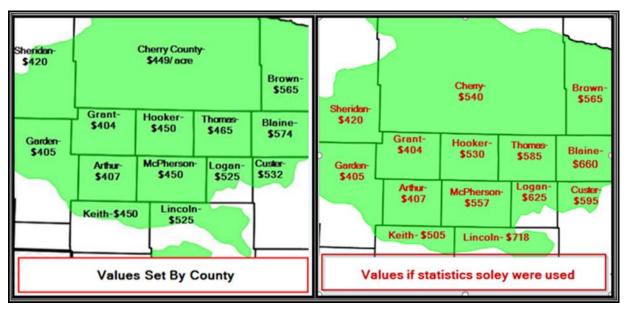

2017 Agricultural Correlation for Logan County

and depreciation were implemented. The county also updated the soil conversion for the 2017 assessment year.

Although there are two separate and distinct land characteristics, there is only one market area for agricultural land. The county addresses these differences in the valuation structure of the cropland LCG's. The county adequately addresses market differences through valuation of the LCG structures.

Equalization

The analysis of agricultural sales after the end of the study period indicate that the county has achieved an acceptable level of value based on today's current market. The values set by the county are equalized with the surrounding counties. The values of Logan County are transitional of those values of surrounding counties and support one another.

Level of Value

Based on the review of all available information, the level of value of agricultural property in Logan County is determined to be at the statutory level of 75% of market value.

2017 Opinions of the Property Tax Administrator for Logan County

My opinions and recommendations are stated as a conclusion based on all of the factors known to me regarding the assessment practices and statistical analysis for this county. See, Neb. Rev. Stat. § 77-5027 (Cum. Supp. 2016). While the median assessment sales ratio from the Qualified Statistical Reports for each class of real property is considered, my opinion of the level of value for a class of real property may be determined from other evidence contained within these Reports and Opinions of the Property Tax Administrator. My opinion of quality of assessment for a class of real property may be influenced by the assessment practices of the county assessor.

Class	Level of Value	Quality of Assessment	Non-binding recommendation
Residential Real Property	100	Meets generally accepted mass appraisal practices.	No recommendation.
Commercial Real Property	Meets generally accepted mass appraisal practices.		No recommendation.
Agricultural Land	75	Meets generally accepted mass appraisal practices.	No recommendation.

^{**}A level of value displayed as NEI (not enough information) represents a class of property with insufficient information to determine a level of value.

Dated this 7th day of April, 2017.

B. Computer, Automation Information and GIS

1.	Administrative software:
	TerraScan (owned by Thomson Reuters)
2.	CAMA software:
	TerraScan (owned by Thomson Reuters)
3.	Are cadastral maps currently being used?
	Yes
4.	If so, who maintains the Cadastral Maps?
	Assessor
5.	Does the county have GIS software?
	Yes
6.	Is GIS available to the public? If so, what is the web address?
	www.logan.gisworkshop.com
7.	Who maintains the GIS software and maps?
	GIS Workshop
8.	Personal Property software:
	TerraScan (owned by Thomson Reuters)

C. Zoning Information

1.	Does the county have zoning?
	Yes
2.	If so, is the zoning countywide?
	No - only the rural area is zoned.
3.	What municipalities in the county are zoned?
	None
4.	When was zoning implemented?
	2003

D. Contracted Services

1.	Appraisal Services:
	Tax Valuation Inc
2.	GIS Services:
	GIS Workshop
3.	Other services:
	TerraScan (owned by Thomson Reuters)

E. Appraisal /Listing Services

1.	Does the county employ outside help for appraisal or listing services?
	Yes, Tax Valuation Inc
2.	If so, is the appraisal or listing service performed under contract?
	Yes
3.	What appraisal certifications or qualifications does the County require?
	Credentialed and professional experience in the appraisal field.
4.	Have the existing contracts been approved by the PTA?
	Yes
5.	Does the appraisal or listing service providers establish assessed values for the county?
	The appraisal firm completes the listing work and helps create the depreciation tables but ultimately the appraiser sets the values

2017 Agricultural Assessment Survey for Logan County

1.	Valuation data collection done by: Assessor and deputy.						
2.	List each market area, and describe the location and the specific characteristics that make each unique.						
	Market Description of unique characteristics Area						
	Logan County is very homogeneous in geographic and soil characteristics; the county is approximately eighty-seven percent grassland, seven percent irrigated, and five percent dry. Most of the cropland is in the southern portion of the county.						
	GIS was reviewed in 2014 to capture the irrigated acres and changes in land use throughout the county.						
3.	Describe the process used to determine and monitor market areas.						
	Not applicable.						
4.	Describe the process used to identify rural residential land and recreational land in the county apart from agricultural land.						
	The county follows the zoning manual in identifying rural residential land as no more than acres. There is no recreational at this time.						
5.	Do farm home sites carry the same value as rural residential home sites? If the market differences?	not, what are					
	Rural home sites are valued at \$5000 for the first acre and the building site is \$500. Values 4500 (rural residential) parcels are the first acre \$5000, \$2395 up to ten acres and \$2395 up twenty acres. These values are used for the whole county.						
6.	If applicable, describe the process used to develop assessed values for parcels enrolled in the Wetland Reserve Program.						
	With lack of market evidence, WRP is valued at 100% market value of grass.						

LOGAN COUNTY 3-YEAR PLAN OF ASSESSMENT JUNE 15, 2016

Logan County has 279 residential properties, 46 Commercial Properties and 1144 agricultural properties. There are an estimated 150 personal property filings each year and estimated 43 homestead exemptions.

Logan County has an official and one full-time clerical that deal with listing of properties, determining of values, and filing personal property schedules. The county also will hire an appraiser as needed. The official handles most of the computer work such as data entry, sketching, record changes, and running necessary reports. The official has final responsibility of setting values for all classes of property.

The County assessor maintains the cadastral mapping system at the time of the recording of a deed. The records have current ownership and land depreciation.

Aerials were taken 2001-2002. Actions that were completed for 2016 are as follows: Ag-land sales were studied and adjusted value according to sales for dryland, grass and irrigated classes. Added new irrigated acres. Hired Tax Valuation Inc., who done pickup work, took pictures and reviewed rural residential property and all the commercial property in the county. We put pictures and changed condition on computer for 2016, but will put on new depreciation and new Marshall & Swift year for 2017. We did a review of residential properties in Gandy Village. No change for village lots in Gandy Village for 2015. Gandy Commercial lot values for 2015 weren't changed from 2007. We did a review of residential properties in Stapleton Village. No change for Stapleton Village Lots for 2015. Stapleton Commercial land values and improvements were not changed in 2015. The 2015 Depreciation schedule was used for residential property rural, Stapleton Village and Gandy Village. 2014 Marshal Swift Pricing for Rural, Gandy Village and Stapleton was used. 2008 Marshall Swift pricing, with 2009 depreciation for rural outbuildings, for improvements that are not included on Marshall Swift Pricing. The new 2015 depreciation schedule for Mobile Homes located in rural and villages was used for 2015, same as residential 2015 depreciation, small number of mobile homes located in Logan County. Ag sites for 4000 were not changed. Rural Ag sites 4500 for 2009 were redefined and revalued same value that was used in 2009 for 2015.

We start our pickup work as time allows. We list all pickup work in a notebook. This work is completed timely according to statute. In 2015-2017 we plan to drive the County and review all property. Work on the assessor's record files. Study Ag-land and take pictures of rural improvements to insert in Terrascan system. We reviewed quality and condition classifications for improved residential property in 2015 and rural residential property in 2016 and updated Marshall Swift Pricing for Rural, Gandy Village and Stapleton Village to 2014 and worked up a new depreciation schedules for Rural, Gandy Village and Stapleton Village in 2015. We reviewed our commercial improvements and outbuildings for 2016 and will be updating our Marshal Swift to 2014 pricing and working up a new depreciation schedule for 2017 tax year.

In 2016-2017 will try and get Stapleton Village and Gandy Village reviewed with new pictures and pick up work. Possibly working up a new depreciation schedule for the 2017 tax year.

Assessor completes 521 data as soon as possible.

Reports of the Logan County Assessor are filed on time.

Homestead Exemption applications are filed on or before June 30. State Statute.

State Statutes, rules and regulations are followed in filing personal property schedules and abstracts are filed on time.
