

Good Life. Great Service.

DEPARTMENT OF REVENUE

2022 REPORTS AND OPINIONS OF THE PROPERTY TAX ADMINISTRATOR

RICHARDSON COUNTY

April 7, 2022

Pete Rickett

Commissioner Keetle :

The Property Tax Administrator has compiled the 2022 Reports and Opinions of the Property Tax Administrator for Richardson County pursuant to <u>Neb. Rev. Stat. § 77-5027</u>. This Report and Opinion will inform the Tax Equalization and Review Commission of the level of value and quality of assessment for real property in Richardson County.

The information contained within the County Reports of the Appendices was provided by the county assessor pursuant to <u>Neb. Rev. Stat. § 77-1514</u>.

For the Tax Commissioner

Sincerely,

Kuth a. Sorensen

Ruth A. Sorensen Property Tax Administrator 402-471-5962

County Abstract of Assessment for Real Property, Form 45 County Abstract of Assessment for Real Property Compared to the Prior Year Certificate of Taxes Levied (CTL) Assessor Survey Three-Year Plan of Assessment Special Value Methodology (if applicable) Ad Hoc Reports Submitted by County (if applicable)

Introduction

Pursuant to <u>Neb. Rev. Stat. § 77-5027</u>, annually, the Property Tax Administrator (PTA) shall prepare and deliver to each county assessor and to the Tax Equalization and Review Commission (Commission) the Reports and Opinions (R&O). The R&O contains statistical and narrative reports informing the Commission of the certified opinion of the PTA regarding the level of value and the quality of assessment of the classes and subclasses of real property in each county. In addition, the PTA may make nonbinding recommendations for class or subclass adjustments for consideration by the Commission.

The statistical and narrative reports in the R&O provide an analysis of the assessment process implemented by each county to reach the levels of value and quality of assessment required by Nebraska law. The PTA's opinion of the level of value and quality of assessment in each county, is a conclusion based upon all the data provided by the county assessor and information gathered by the Nebraska Department of Revenue, Property Assessment Division (Division) regarding the assessment activities in the county during the preceding year.

The statistical reports are developed using the statewide sales file that contains all transactions as required by <u>Neb. Rev. Stat. § 77-1327</u>. From this state sales file, a statistical analysis comparing assessments to sale prices for arm's-length sales (assessment sales ratio) is prepared. After analyzing all available information to determine that the sales represent the class or subclass of real property being measured, inferences are drawn regarding the level of assessment and quality of assessment of that class or subclass of real property. The statistical reports contained in the R&O are developed based on standards developed by the International Association of Assessing Officers (IAAO).

The analysis of assessment practices in each county is necessary to give proper context to the statistical inferences from the assessment sales ratio studies and the overall quality of assessment in the county. The assessment practices are evaluated in the county to ensure generally accepted mass appraisal techniques are used and that those methods will generally produce uniform and proportionate valuations.

The PTA considers the statistical reports and the analysis of assessment practices when forming conclusions for both the level of value and quality of assessment. The consideration of both the statistical indicators and assessment processes used to develop valuations is necessary to accurately determine the level of value and quality of assessment. Assessment practices that produce a biased sales file will generally produce a biased statistical indicator, which, on its face, would otherwise appear to be valid. Likewise, statistics produced on small, unrepresentative, or otherwise unreliable samples, may indicate issues with assessment uniformity and assessment level – however, a detailed review of the practices and valuation models may suggest otherwise. For these reasons, the detail of the PTA's analysis is presented and contained within the Residential, Commercial, and Agricultural land correlations of the R&O.

Statistical Analysis:

Before relying upon any calculated statistical measures to evaluate the assessment performance of the county assessor, the Division staff must evaluate whether the statistical sample is both representative of the population and statistically reliable.

A statistically sufficient reliable sample of sales is one in which the features of the sample contain information necessary to compute an estimate of the population. To determine whether the sample of sales is sufficient in size to evaluate the class of real property, measures of reliability are considered, such as the coefficient of dispersion (COD) or the width of the confidence interval. Generally, the broader the qualitative measures, the more sales will be needed to have reliability in the ratio study.

A representative sample is a group of sales from a larger population of parcels, such that statistical indicators calculated from the sample can be expected to reflect the characteristics of the sold and unsold population being studied. The accuracy of statistics as estimators of the population depends on the degree to which the sample represents the population.

Since multiple factors affect whether a sample is statistically sufficient, reliable, and representative, single test thresholds cannot be used to make determinations regarding sample reliability or representativeness.

For the analysis in determining a point estimate of the level of value, the PTA considers three measures as indicators of the central tendency of assessment: the median ratio, weighted mean ratio, and mean ratio. The use and reliability of each measure is based on inherent strengths and weaknesses which are the quantity and quality of the information from which it was calculated and the defined scope of the analysis.

The median ratio is considered the most appropriate statistical measure to determine a level of value for direct equalization, which is the process of adjusting the values of classes or subclasses of property in response to an unacceptable required level of value. Since the median ratio is considered neutral in relationship to either assessed value or selling price, adjusting the class or subclass of properties based upon the median measure will not change the relationships between assessed value and level of value already present in the class of property. Additionally, the median ratio is less influenced by the presence of extreme ratios, commonly called outliers, which can skew the outcome in the other measures.

The weighted mean ratio best reflects a comparison of the fully assessable valuation of a jurisdiction, by measuring the total assessed values against the total of selling prices. The weighted mean ratio can be heavily influenced by sales of large-dollar property with extreme ratios.

The mean ratio is used as a basis for other statistical calculations, such as the Price Related Differential (PRD) and Coefficient of Variation (COV). As a simple average of the ratios, the mean ratio has limited application in the analysis of the level of value because it assumes a normal

distribution of the data set around the mean ratio with each ratio having the same impact on the calculation regardless of the assessed value or the selling price.

The quality of assessment relies in part on statistical indicators as well. If the weighted mean ratio, because of its dollar-weighting feature, is significantly different from the mean ratio, it may be an indication of disproportionate assessments. Assessments are disproportionate when properties within a class are assessed at noticeably different levels of market value. The coefficient produced by this calculation is referred to as the PRD and measures the assessment level of lower-priced properties relative to the assessment level of higher-priced properties.

The Coefficient of Dispersion (COD) is a measure also used in the evaluation of assessment quality. The COD measures the average absolute deviation calculated about the median and is expressed as a percentage of the median. A COD of 15% indicates that half of the assessment ratios are expected to fall within 15% of the median. The closer the ratios are grouped around the median the more equitable the property assessments tend to be.

The confidence interval is another measure used to evaluate the reliability of the statistical indicators. The PTA primarily relies upon the median confidence interval, although the mean and weighted mean confidence intervals are calculated as well. While there are no formal standards regarding the acceptable width of such measure, the range established is often useful in determining the range in which the true level of value is expected to exist. Pursuant to <u>Neb. Rev.</u> <u>Stat. §77-5023</u>, the acceptable range is 69% to 75% of actual value for agricultural land and 92% to 100% for all other classes of real property.

| General Property Class | Jurisdiction Size/Profile/Market Activity | COD Range |
|--|---|-------------|
| Residential improved (single family | Very large jurisdictions/densely populated/newer properties/active markets | 5.0 to 10.0 |
| dwellings, condominiums, manuf. | Large to mid-sized jurisdictions/older & newer properties/less active markets | 5.0 to 15.0 |
| housing, 2-4 family units) | Rural or small jurisdictions/older properties/depressed market areas | 5.0 to 20.0 |
| | Very large jurisdictions/densely populated/newer properties/active markets | 5.0 to 15.0 |
| Income-producing properties (commercial, | Large to mid-sized jurisdictions/older & newer properties/less active markets | 5.0 to 20.0 |
| industrial, apartments,) | Rural or small jurisdictions/older properties/depressed market areas | 5.0 to 25.0 |
| | Very large jurisdictions/rapid development/active markets | 5.0 to 15.0 |
| Residential vacant land | Large to mid-sized jurisdictions/slower development/less active markets | 5.0 to 20.0 |
| | Rural or small jurisdictions/little development/depressed markets | 5.0 to 25.0 |
| | Very large jurisdictions/rapid development/active markets | 5.0 to 20.0 |
| Other (non-agricultural) vacant land | Large to mid-sized jurisdictions/slower development/less active markets | 5.0 to 25.0 |
| | Rural or small jurisdictions/little development/depressed markets | 5.0 to 30.0 |

Nebraska law does not provide for a range of acceptability for the COD or PRD; however, the IAAO Standard on Ratio Studies establishes the following range of acceptability for the COD:

A COD under 5% indicates that the properties in the sample are either unusually homogenous, or possibly indicative of a non-representative sample due to the selective reappraisal of sold parcels. The IAAO utilizes varying upper bounds for the COD range to recognize that sample size, property type, variation of property ages and market conditions directly impact the COD. This chart and the analyses of factors impacting the COD are considered to determine whether the calculated COD is within an acceptable range. The reliability of the COD can also be directly affected by extreme ratios.

The PRD range stated in IAAO standards is 98% to 103%. A perfect match in assessment level between the low-dollar properties and high-dollar properties indicates a PRD of 100%. The reason for the extended range on the high end is IAAO's recognition of the inherent bias in assessment. The IAAO Standard on Ratio Studies notes that the PRD is sensitive to sales with higher prices even if the ratio on higher priced sales do not appear unusual relative to other sales, and that small samples, samples with high dispersion, or extreme ratios may not provide an accurate indication of assessment regressivity or progressivity, appraisal biases that occur when high-value properties are appraised higher or lower than low-value properties in relation to market values.

Analysis of Assessment Practices:

A review of the assessment practices that ultimately affect the valuation of real property in each county is completed. This review is done to ensure the reliability of the statistical analysis and to ensure generally accepted mass appraisal techniques are used to establish uniform and proportionate valuations. The review of assessment practices is based on information provided by the county assessors in Assessment Surveys and Assessed Value Updates (AVU), along with observed assessment practices in the county.

To ensure county assessors are submitting all Real Estate Transfer Statements, required for the development of the state sales file pursuant to <u>Neb. Rev. Stat. §77-1327</u>, a random sample from the county registers of deeds' records is audited to confirm that the required sales have been submitted and reflect accurate information. The timeliness of the submission is also reviewed to ensure the sales file allows analysis of up-to-date information. The sales verification and qualification procedures used by the county assessors are reviewed to ensure that sales are properly considered arm's-length transactions unless determined to be otherwise through the verification process. Proper sales verification practices ensure the statistical analysis is based on an unbiased sample of sales.

Comparison of valuation changes on sold and unsold properties is conducted to ensure that there is no bias in the assessment of sold parcels and that the sales file adequately represents the population of parcels in the county.

Valuation groups and market areas are also examined to identify whether the groups and areas being measured truly represent economic areas within the county. The measurement of economic areas is the method by which the PTA ensures intra-county equalization exists. The progress of the county assessor's six-year inspection and review cycle is documented to ensure compliance with <u>Neb. Rev. Stat. § 77-1311.03</u> and also to confirm that all property is being uniformly listed and described for valuation purposes.

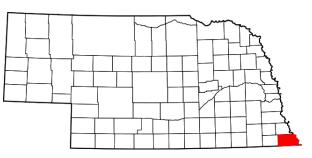

Valuation methodologies developed by the county assessor are reviewed for both appraisal logic and to ensure compliance with generally accepted mass appraisal techniques. Methods and sales used to develop lot values, agricultural outbuildings, and agricultural site values are also reviewed to ensure the land component of the valuation process is based on the local market and economic area. Compliance with statutory reporting requirements is also a component of the assessment practices review. Late, incomplete, or excessive errors in statutory reports can be problematic for property owners, county officials, the review done by Division staff, the Commission, and others. The late, incomplete, or excessive errors in statutory reporting highlights potential issues in other areas of the assessment process. Public trust in the assessment process demands transparency, and assessment practices are reviewed to ensure taxpayers are served with such transparency.

Comprehensive review of assessment practices in each county is conducted throughout the year. When practical, if potential issues are identified, they are presented to the county assessor for clarification and correction, if necessary. The county assessor can then work to implement corrective measures prior to establishing assessed values. The PTA's conclusion that assessment quality either meets or does not meet generally accepted mass appraisal techniques is based on the totality of the assessment practices in the county.

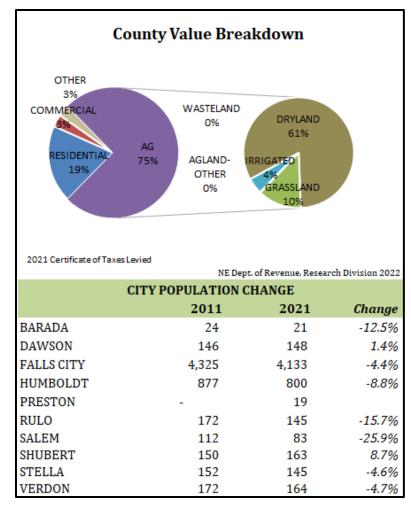

*Further information may be found in Exhibit 94

County Overview

With a total area of 552 square miles, Richardson County has 7,871 residents, per the Census Bureau Quick Facts for 2020, a 6% population decline from the 2010 U.S. Census. Reports indicate that 76% of county residents are homeowners and 92% of residents occupy the same residence as in the prior year (Census Quick Facts). The average home

value is \$59,235 (2021 Average Residential Value, Neb. Rev. Stat. § 77-3506.02).

The majority of the commercial properties in Richardson County are located in and around Falls City with some commercial contribution from Humboldt as well. According to the latest information available from the U.S. Census Bureau, there are 258 employer establishments with total employment of 1,763, for a slight decrease in employment from 2019.

Agricultural land is the singles largest contributor to the county's valuation base by an overwhelming majority. Dryland makes up the majority of the land in the county. Richardson County is included in the Nemaha Natural Resources District (NRD).

Assessment Actions

For the residential property class, the villages of Stella, Rulo, and Verdon were physically inspected, they are part of Valuation Group 6. New photos and sketches were completed. For the remainder of the residential class, routine maintenance and pick-up work was completed timely.

Assessment Practice Review

As explained in the Introduction of this Report and Opinion, the assessment practices were reviewed to determine compliance with all assessment requirements and to ensure that all data submitted to the State sales file was timely and accurate.

Sales verification and qualification processes are reviewed and discussed with the assessor. Review of qualified and nonqualified sales rosters supports that all arm's-length sales have been utilized for the measurement of the residential class. Richardson county sales usability rate is above the State average.

Another practice reviewed involves the examination of valuation groups to ensure that economic differences are adequately identified and grouped. The residential class in Richardson County identifies seven separate valuation groups.

The appraisal tables are reviewed to ensure they are current. The county assessor updated costing countywide in 2017 in keeping with the six-year inspection and review requirement process. Land tables are updated as each valuation group is reviewed and inspected. Currently 2014 through 2016 deprecation tables are utilized, and value groups are studied each year for any adjustments.

Frequency of the six-year inspection and review cycle of the county is also reviewed. The county has kept up the review and inspection of all properties within the required six years. A systematic plan is in place to maintain compliance.

The county assessor submitted a valuation methodology, but it is lacking assessment practice description for each of the classes - residential, commercial, and agricultural land.

Description of Analysis

The Richardson County Assessor now recognizes four valuation groups for the residential class of real property since Valuation Groups 2, 5, and 7 were combined into Valuation Group 6.

2022 Residential Correlation for Richardson County

| Valuation Group | Description |
|--------------------|---|
| 1 | Falls City |
| 3 | Humboldt |
| | Rulo, Salem, Verdon, Stella, Dawson, Shubert, |
| 6 | Barada and Preston |
| 11 | Rural Residential, Acreage Rural |

The overall statistical sampling shows all three measures of central tendency are within the acceptable range and closely grouped. The qualitative statistics are slightly high, and reflective of a rural market.

When further stratified into separate groups, all valuation groups are within the acceptable range, with relatively similar medians, suggesting they are equalized.

Review of changes to the sales file and changes reflected in the County Abstract of Assessment, Form 45 Compared to the Certificate of Taxes Levied Report (CTL) reflects that sold properties changed at a similar rate to the overall population.

Equalization and Quality of Assessment

Based on the analysis and the assessment practices review, the quality of assessment of residential property in Richardson County complies with generally accepted mass appraisal techniques.

| VALUATION GROUP | | | | | | |
|-----------------|-------|--------|--------|----------|-------|--------|
| RANGE | COUNT | MEDIAN | MEAN | WGT.MEAN | COD | PRD |
| 1 | 111 | 96.25 | 101.59 | 96.55 | 23.20 | 105.22 |
| 3 | 20 | 92.72 | 92.59 | 77.54 | 26.48 | 119.41 |
| 6 | 12 | 93.86 | 95.19 | 88.69 | 17.91 | 107.33 |
| 11 | 12 | 91.60 | 93.15 | 94.14 | 18.94 | 98.95 |
| ALL | 155 | 94.56 | 99.28 | 94.21 | 23.12 | 105.38 |

Level of Value

Based on analysis of all available information, the level of value for the residential property in Richardson County is 95%.

Assessment Actions

The county assessor completed all pick-up work and changed valuations accordingly.

Assessment Practice Review

As explained in the Introduction of this Report and Opinion, the assessment practices were reviewed to determine compliance with all assessment requirements and to ensure that all data submitted to the State sales file was timely and accurate.

A review of the valuation groups show that the commercial class contains three valuation groups. Each indicative of their unique characteristics for the commercial class.

The county assessor complies with the six-year inspection and review cycle for the commercial class of property. A review of the current appraisal tables show that cost tables are dated 2012. Lot values are 2016, while deprecation is 2012 for all valuation groups.

Regarding the use of the three approaches to value, when information is received regarding income, the contract appraiser and county assessor will use the income approach to value those properties. All other commercial properties are valued using the cost approach, using the Computer-Assisted Mass Appraisal (CAMA) cost tables.

Description of Analysis

| Valuation Group | Description |
|--------------------|--|
| 1 | Falls City |
| 2 | Humboldt |
| | All Commercial properties except Falls City, |
| 3 | Humboldt |

All commercial parcels are analyzed using three unique valuation groups.

There are only 18 sales in the commercial class of property, with one of the three measures of central tendency above the acceptable range, with a COD that is above the prescribed parameters and a PRD that is high. Review of the sales price substratum does not show a clear market trend as too few commercial sales occur per year.

| Study Yrs | COUNT | MEDIAN | MEAN | WGT.MEAN | COD | PRD |
|------------------------|-------|--------|--------|----------|-------|--------|
| 01-OCT-18 To 30-SEP-19 | 5 | 96.49 | 93.86 | 105.35 | 15.80 | 89.09 |
| 01-OCT-19 To 30-SEP-20 | 5 | 84.37 | 101.22 | 96.30 | 26.68 | 105.11 |
| 01-OCT-20 To 30-SEP-21 | 8 | 109.02 | 111.10 | 98.12 | 29.04 | 113.23 |

Further review of the statistic by valuation groups indicates that only Valuation Group 1 has more than a few sales, it is slightly below the acceptable range. Review of the sales indicates that the sales on either side of the median range from 82% through 96% suggesting that the statistics will vary significantly as sales come in and out of the sample, for that reason, the statistic is not reliable. A substat of this valuation group can be found in the appendix of this report.

Despite the lack of sufficient market data, the county assessor has proactively adjusted commercial properties along with the general movement of residential property, that trend continued this year. Lacking sufficient sales, the county assessor's methodology to change assessed values with the general economy, results in equalized valuation within class.

Review of the changes in sold properties as compared to the 2022 County Abstract of Assessment for Real Property, Form 45 Compared with the 2021 Certificate of Taxes Levied Report (CTL) indicates that all properties increased uniformly and support the stated actions of the county assessor.

Equalization and Quality of Assessment

The statistical sample size in each valuation group is considered unreliable for measurement purposes. Review of the assessment practices demonstrate that the assessment practices are uniform and equalized. The quality of assessment for the commercial class of real property in Richardson County is in compliance with generally accepted mass appraisal techniques.

| VALUATION GROUP | | | | | | |
|-----------------|-------|--------|--------|----------|-------|--------|
| RANGE | COUNT | MEDIAN | MEAN | WGT.MEAN | COD | PRD |
| 1 | 11 | 91.04 | 88.79 | 92.89 | 18.77 | 95.59 |
| 2 | 3 | 144.85 | 130.32 | 136.99 | 17.80 | 95.13 |
| 3 | 3 | 124.52 | 116.23 | 121.39 | 21.14 | 95.75 |
| 6 | 1 | 147.88 | 147.88 | 147.88 | 00.00 | 100.00 |
| ALL | 18 | 98.25 | 103.57 | 99.14 | 27.00 | 104.47 |

Level of Value

Based on analysis of all available information, the level of value for the commercial property in Richardson County is determined to be at the statutory level of 100% of market value.

Assessment Actions

All pick-up work countywide was successfully completed. The first acre values on farm home sites and on acreage home sites increased to \$10,000 and \$11,130 respectively. The county assessor updated land use changes and conducted a market analysis and determined that current values reflected the current market, and no change to agricultural land tables was warranted.

Assessment Practice Review

As explained in the Introduction of this Report and Opinion, the assessment practices were reviewed to determine compliance with all assessment requirements and to ensure that all data submitted to the State sales file was timely and accurate.

Sales verification and qualification processes were one aspect that were reviewed. The county assessor utilizes a market study they conducted on rural residential sales. During sales review of parcels, Richardson County observes present use and, if variables are not indicative of normal market conditions, either buyer or seller is contacted to further inquire regarding the intention of use for parcel

The usability rate was above what has been typical for the agricultural class across the state. Review of the sales rosters and comments indicate that a majority of sales that were nonqualified were between family members, partial transfers, gifts, same ownership, adjacent ownership land court decrees. The review of the sales rosters along with the comments provided, indicates that all arm's-length transactions have been made available for measurement.

Market Areas are also examined. Richardson County currently values land in two Ag market areas. Market Area 44 consists of five precincts in the western part of the county. Market Area 50 consists of 10 precincts in the middle and eastern part of the county. It has richer soil and better farming conditions making it unique from the other area. Intensive use was also discussed. Land use survey was completed on Market Area 44 in 2019, and for Market Group 50 in 2020.

The county assessor reviewed and updated intensive use values for the 2021 assessment year. The depreciation table is from 2016, costing is dated 2017. Farm home sites and rural acreages in the county are not valued the same. Currently farm home sites are valued at \$10,000 for the first acre. Rural residential home sites are valued at \$11,130 for the first acre, available market data is used to determine if each supports a distinct value.

Frequency of the six-year inspection and review cycle was also looked at. The county has recently reviewed land use countywide and physically inspected ag improvements as part of the rural review for the 2021 assessment year. All parcels checked had pictures however, not all the pictures were date stamped.

Description of Analysis

The statistical sample for the agricultural class of real property show that two of the three measures of central tendency are above the range. Market Area 44 is above the acceptable range, while Market Area 50 is at the upper end of the range at 75%. In reviewing the agricultural sales through the three-year study period, there are fewer sales for the most recent year.

| Study Yrs | | | | | | |
|------------------------|----|-------|-------|-------|-------|--------|
| 01-OCT-18 To 30-SEP-19 | 11 | 90.11 | 85.92 | 82.30 | 14.16 | 104.40 |
| 01-OCT-19 To 30-SEP-20 | 12 | 76.61 | 73.43 | 69.47 | 14.78 | 105.70 |
| 01-OCT-20 To 30-SEP-21 | 2 | 77.14 | 77.14 | 64.01 | 23.83 | 120.51 |

In fact, there were no sales in Market Area 44 in the most recent year, with the last sales in Market Area 44 occurring in the quarter that ended June 30, 2020. Sales occurring after the study period provide evidence of an increasing market for agricultural land in Richardson County.

Review of the 80% Majority Land Use (MLU) statistics show that neither market area have a reliable number of sales for an accurate measurement when sales are stratified to MLU subclasses. Based on the minimal number of MLU sales, the only adjustment that could be evaluated is a 10% decrease to Market Area 44. This adjustment would move the few MLU irrigated and grass sales that exist in this market area below the acceptable range, without bringing the small sample of dryland into the range. The adjustment would move Market Area 44 and the overall class within the range; however, the reduction would decrease Richardson County's agricultural land values to a level below both Nemaha and Pawnee County and would not achieve equalization. A substat of Market Area 44 with and without a 10% reduction, an overall agricultural what-if statistic showing the affect of a 10% reduction to Market Area 44 on the overall class, and an Average Acre Comparison Chart both with and without a 10% reduction to Market Area 44 can be found in the appendix of this report.

Comparison of the Richardson County land values to the values of the surrounding comparable counties in the average acre value comparison by LCG does support that a proportionate level of value has been reached for both market areas. For all three majority land use categories the average weighted values for Richardson County are between those for Nemaha and Pawnee counties. The market in Nemaha County is a stronger comparison and reflects more shared characteristics with both bordering the Missouri River. Based on the review of all available information, the agricultural land values in Richardson County have achieved an acceptable level of market value. Review of the 2022 County Abstract of Assessment for Real Property, Form 45 Compared with the 2021 Certificate of Taxes Levied Report (CTL) matches the reported actions of the county assessor and reflects that no changes were made for the schedule of agricultural land values this year.

Equalization and Quality of Assessment

Agricultural homes and outbuildings are valued utilizing the same appraisal processes as the rural residential property. The rural acreages are assessed within the acceptable range; therefore, agricultural improvements are equalized and have achieved market value. Agricultural land

values have also been equalized. The quality of assessment of the agricultural class of real property complies with generally accepted mass appraisal techniques.

Level of Value

Based on the review of all available information, the level of value of agricultural land in Richardson County is determined to be at the statutory level of 75% of market value.

2022 Opinions of the Property Tax Administrator for Richardson County

My opinions and recommendations are stated as a conclusion based on all of the factors known to me regarding the assessment practices and statistical analysis for this county. See, Neb. Rev. Stat. § 77-5027 (R.R.S. 2011). While the median assessment sales ratio from the Qualified Statistical Reports for each class of real property is considered, my opinion of the level of value for a class of real property may be determined from other evidence contained within these Reports and Opinions of the Property Tax Administrator. My opinion of quality of assessment for a class of real property may be influenced by the assessment practices of the county assessor.

| Class | Level of Value | Quality of Assessment | Non-binding recommendation |
|------------------------------|----------------|---|----------------------------|
| Residential Real Property | 95 | Meets generally accepted mass appraisal techniques. | No recommendation. |
| | | | |
| Commercial Real Property | 100 | Meets generally accepted mass appraisal techniques. | No recommendation. |
| | | | |
| Agricultural Land | 75 | Meets generally accepted mass appraisal techniques. | No recommendation. |
| | | | |

**A level of value displayed as NEI (not enough information) represents a class of property with insufficient information to determine a level of value.

Dated this 7th day of April, 2022.

Soils

CLASS

Excesssive drained sandy soils formed in alluvium in valleys and eolian sand on uplands in sandhills

Excessively drained sandy soils formed in eolian sands on uplands in sandhills

Moderately well drained silty soils on uplands and in depressions formed in loess

Well drained silty soils formed in loess on uplands

Well drained silty soils formed in loess and alluvium on stream terraces

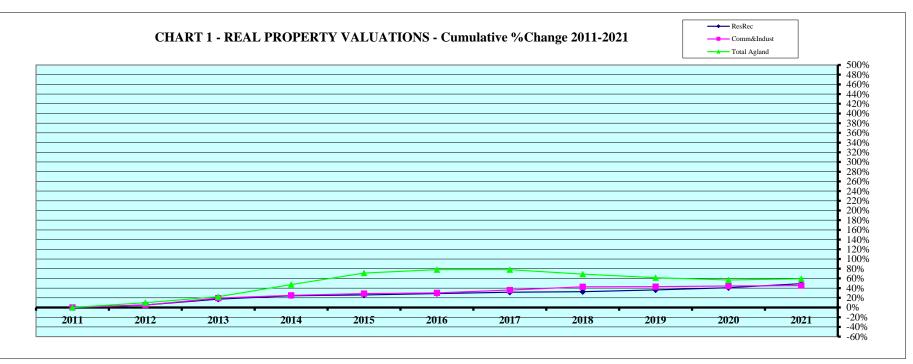

Well to somewhat excessively drained loamy soils formed in weathered sandstone and eolian material on uplands

Somewhat poorly drained soils formed in alluvium on bottom lands

Moderately well drained silty soils with clay subsoils on uplands

Lakes

| | 0 |
| 5. | Number of shared employees: |
| | 0 |
| 6. | Assessor's requested budget for current fiscal year: |
| | \$184,620.72 |
| 7. | Adopted budget, or granted budget if different from above: |
| | \$186,451.35 |
| 8. | Amount of the total assessor's budget set aside for appraisal work: |
| | \$2,000 is for the Pritchard & Abbott for mineral appraisal. |
| 9. | If appraisal/reappraisal budget is a separate levied fund, what is that amount: |
| | N/A |
| 10. | Part of the assessor's budget that is dedicated to the computer system: |
| | \$22000 |
| 11. | Amount of the assessor's budget set aside for education/workshops: |
| | Funded out of County General Fund |
| 12. | Amount of last year's assessor's budget not used: |
| | \$20,588.28 |

B. Computer, Automation Information and GIS

| 1. | Administrative software: |
|-----|---|
| | MIPS |
| 2. | CAMA software: |
| | MIPS |
| 3. | Personal Property software: |
| | MIPS |
| 4. | Are cadastral maps currently being used? |
| | Yes |
| 5. | If so, who maintains the Cadastral Maps? |
| | County assessor and staff |
| 6. | Does the county have GIS software? |
| | Yes |
| 7. | Is GIS available to the public? If so, what is the web address? |
| | Yes. https://richardson.gworks.com |
| 8. | Who maintains the GIS software and maps? |
| | gWorks |
| 9. | What type of aerial imagery is used in the cyclical review of properties? |
| | Connect explorer - Pictometry |
| 10. | When was the aerial imagery last updated? |
| | 2022 |
| | 1 |

C. Zoning Information

| 1. | Does the county have zoning? |
|----|--|
| | No |
| | |
| 2. | If so, is the zoning countywide? |
| 2. | If so, is the zoning countywide? N/A |

| 3. | What municipalities in the county are zoned? |
|----|--|
| | Falls City and Humboldt are zoned. |
| 4. | When was zoning implemented? |
| | Unknown |

D. Contracted Services

| 1. | Appraisal Services: |
|----|---------------------------------------|
| | Prichard & Abbot - mineral interests. |
| 2. | GIS Services: |
| | gWorks |
| 3. | Other services: |
| | Connect Explorer - Pictometry |

E. Appraisal /Listing Services

| 1. | List any outside appraisal or listing services employed by the county for the current assessment year |
|----|---|
| | Pritchard & Abbott for mineral appraisal services. |
| 2. | If so, is the appraisal or listing service performed under contract? |
| | Yes. |
| 3. | What appraisal certifications or qualifications does the County require? |
| | No certifications or qualifications. |
| 4. | Have the existing contracts been approved by the PTA? |
| | Yes. |
| 5. | Does the appraisal or listing service providers establish assessed values for the county? |
| | Yes. |

| Γ | Valuation Group 1 and Valuation Group 2 are comprised of the more populated communities in | 1 |
|---|--|---|
| | Richardson County. Each reflects its own unique market. Valuation Group 3 is a grouped for | |
| | convenience and represents all remaining commercial property in the county. The market in this | 5 |
| | group varies substantially with limited sales to array any statistical data that would provide any | 7 |
| | confidence in any statistical analysis. | |

2022 Agricultural Assessment Survey for Richardson County

| 1. | Valuation data collection done by: County assessor and staff. | | | | | |
|-----|---|--|----------------------------|--|--|--|
| | | | | | | |
| 2. | List each market area, and describe the location and the specific characteristics that make each unique. | | | | | |
| | <u>Market</u> <u>Area</u> | Description of unique characteristics | Year Land Use Completed | | | |
| | 44 | Based on sales and land use study, market area 44 consists of 5 precincts in the western part of the county. This land has poorer soil and rocky ground. Sales have been lower in these 5 precincts. | 2019 | | | |
| | 50 | Market area 50 consists of 10 precincts in the middle and eastern part of the county. It has richer soil and better farming conditions. Sales in this area have remained consistent over the past 2-3 years and have stayed within the level of value required by the State of Nebraska. | 2020 | | | |
| | Richardson | County currently values agricultural land in two market areas. | | | | |
| 3. | Describe th | e process used to determine and monitor market areas. | | | | |
| | A market analysis is conducted, including a review of sales and LCG's when determining if a market area exists for valuation purposes. Sales assessment ratios within various townships are utilized to observe market trends with dates of sale now being a key variable when considering ratios. A percentage increase was applied last year. | | | | | |
| 4. | | the process used to identify rural residential land and recreation: rt from agricultural land. | al land in the | | | |
| | During sales review of parcels, the County observes present use and, if variables are indicative of normal market conditions, either buyer or seller is contacted to further inqueregarding the intention of use for parcel. | | | | | |
| 5. | | home sites carry the same value as rural residential home sites gy is used to determine market value? | ? If not what | | | |
| | sites are v | atly farm home sites are valued at \$10,000 for the first acre. Rural valued at \$11,130 for the first acre. Available market data is used to de distinct value.??? | | | | |
| 6. | What separate county? | arate market analysis has been conducted where intensive use is id | dentified in the | | | |
| | | lots in this county: they value ground as grass and individual nts to parcel, including concrete. | ly measure all | | | |
| 7. | 1 | ble, describe the process used to develop assessed values for parcels eserve Program. | enrolled in the | | | |
| | to arrive a | n sales verification process is in place. The county uses similar sales wat the market value for the parcels enrolled. Currently \$550 per acre is d US Army Corp of Engineers (Exempt). | • | | | |
| 7a. | Are any ot | her agricultural subclasses used? If yes, please explain. | | | | |

| | No. |
|-----|--|
| | If your county has special value applications, please answer the following |
| 8a. | How many parcels have a special valuation application on file? |
| | None. |
| 8b. | What process was used to determine if non-agricultural influences exist in the county? |
| | N/A |
| | If your county recognizes a special value, please answer the following |
| 8c. | Describe the non-agricultural influences recognized within the county. |
| | N/A |
| 8d. | Where is the influenced area located within the county? |
| | N/A |
| 8e. | Describe in detail how the special values were arrived at in the influenced area(s). |
| | N/A |
