

# 2020 REPORTS AND OPINIONS OF THE PROPERTY TAX ADMINISTRATOR

**SIOUX COUNTY** 

April 7, 2020

Pete Ricketts. Governor

#### Commissioner Hotz:

The Property Tax Administrator has compiled the 2020 Reports and Opinions of the Property Tax Administrator for Sioux County pursuant to Neb. Rev. Stat. § 77-5027. This Report and Opinion will inform the Tax Equalization and Review Commission of the level of value and quality of assessment for real property in Sioux County.

The information contained within the County Reports of the Appendices was provided by the county assessor pursuant to Neb. Rev. Stat. § 77-1514.

For the Tax Commissioner

Sincerely,

Ruth A. Sorensen

Property Tax Administrator

Kuth a. Sorensen

402-471-5962

cc: Michelle Zimmerman, Sioux County Assessor

#### Introduction

Pursuant to Neb. Rev. Stat. § 77-5027, annually, the Property Tax Administrator (PTA) shall prepare and deliver to each county assessor and to the Tax Equalization and Review Commission (Commission) the Reports and Opinions (R&O). The R&O contains statistical and narrative reports informing the Commission of the certified opinion of the PTA regarding the level of value and the quality of assessment of the classes and subclasses of real property in each county. In addition, the PTA may make nonbinding recommendations for class or subclass adjustments for consideration by the Commission.

The statistical and narrative reports in the R&O provide an analysis of the assessment process implemented by each county to reach the levels of value and quality of assessment required by Nebraska law. The PTA's opinion of the level of value and quality of assessment in each county is a conclusion based upon all the data provided by the county assessor and information gathered by the Nebraska Department of Revenue, Property Assessment Division (Division) regarding the assessment activities in the county during the preceding year.

The statistical reports are developed using the statewide sales file that contains all transactions as required by Neb. Rev. Stat. § 77-1327. From this sales file, the Division prepares a statistical analysis comparing assessments to sale prices for arm's-length sales (assessment sales ratio). After analyzing all available information to determine that the sales represent the class or subclass of real property being measured, inferences are drawn regarding the level of assessment and quality of assessment of that class or subclass of real property. The statistical reports contained in the R&O are developed based on standards developed by the International Association of Assessing Officers (IAAO).

The analysis of assessment practices in each county is necessary to give proper context to the statistical inferences from the assessment sales ratio studies and the overall quality of assessment in the county. The assessment practices are evaluated in the county to ensure professionally accepted mass appraisal methods are used and that those methods will generally produce uniform and proportionate valuations.

The PTA considers the statistical reports and the analysis of assessment practices when forming conclusions on both the level of value and quality of assessment. The consideration of both the statistical indicators and assessment processes used to develop valuations is necessary to accurately determine the level of value and quality of assessment. Assessment practices that produce a biased sales file will generally produce a biased statistical indicator, which, on its face, would otherwise appear to be valid. Likewise, statistics produced on small, unrepresentative, or otherwise unreliable samples, may indicate issues with assessment uniformity and assessment level—however, a detailed review of the practices and valuation models may suggest otherwise. For these reasons, the detail of the PTA's analysis is presented and contained within the Residential, Commercial, and Agricultural land correlations of the R&O.

In 2019, Neb. Rev. Stat. § 77-1363 was amended with the passage of LB 372. The bill became operative on August 31, 2019 and specified that Land Capability Group (LCG) classifications must be based on land-use specific productivity data from the Natural Resources Conservation Service (NRCS). The Division used the NRCS data to develop a new LCG structure to comply with the statutory change. Each county received the updated land capability group changes and applied them to the inventory of land in the 2020 assessment year.

#### **Statistical Analysis:**

Before relying upon any calculated statistical measures to evaluate a county's assessment performance, the Division must evaluate whether the statistical sample is both representative of the population and statistically reliable.

A statistically sufficient reliable sample of sales is one in which the features of the sample contain information necessary to compute an estimate of the population. To determine whether the sample of sales is sufficient in size to evaluate the class of real property, measures of reliability are considered, such as the coefficient of dispersion (COD) or the width of the confidence interval. Generally, the broader the qualitative measures, the more sales will be needed to have reliability in the ratio study.

A representative sample is a group of sales from a larger population of parcels, such that statistical indicators calculated from the sample can be expected to reflect the characteristics of the sold and unsold population being studied. The accuracy of statistics as estimators of the population depends on the degree to which the sample represents the population.

Since multiple factors affect whether a sample is statistically sufficient, reliable, and representative, single test thresholds cannot be used to make determinations regarding sample reliability or representativeness.

For the analysis in determining a point estimate of the level of value, the PTA considers three measures as indicators of the central tendency of assessment: the median ratio, weighted mean ratio, and mean ratio. The use and reliability of each measure is based on inherent strengths and weaknesses which are the quantity and quality of the information from which it was calculated and the defined scope of the analysis.

The median ratio is considered the most appropriate statistical measure to determine a level of value for direct equalization, which is the process of adjusting the values of classes or subclasses of property in response to an unacceptable required level of value. Since the median ratio is considered neutral in relationship to either assessed value or selling price, adjusting the class or subclass of properties based upon the median measure will not change the relationships between assessed value and level of value already present in the class of property. Additionally, the median ratio is less influenced by the presence of extreme ratios, commonly called outliers, which can skew the outcome in the other measures.

The weighted mean ratio best reflects a comparison of the fully assessable valuation of a jurisdiction, by measuring the total assessed value against the total of selling prices. The weighted mean ratio can be heavily influenced by sales of large-dollar property with extreme ratios.

The mean ratio is used as a basis for other statistical calculations, such as the Price Related Differential (PRD) and Coefficient of Variation (COV). As a simple average of the ratios, the mean ratio has limited application in the analysis of the level of value because it assumes a normal distribution of the data set around the mean ratio with each ratio having the same impact on the calculation regardless of the assessed value or the selling price.

The quality of assessment relies in part on statistical indicators as well. If the weighted mean ratio, because of its dollar-weighting feature, is significantly different from the mean ratio, it may be an indication of disproportionate assessments. Assessments are disproportionate when properties within a class are assessed at noticeably different levels of market value. The coefficient produced by this calculation is referred to as the PRD and measures the assessment level of lower-priced properties relative to the assessment level of higher-priced properties.

The Coefficient of Dispersion (COD) is a measure also used in the evaluation of assessment quality. The COD measures the average absolute deviation calculated about the median and is expressed as a percentage of the median. A COD of 15% indicates that half of the assessment ratios are expected to fall within 15% of the median. The closer the ratios are grouped around the median the more equitable the property assessments tend to be.

The confidence interval is another measure used to evaluate the reliability of the statistical indicators. The Division primarily relies upon the median confidence interval, although the mean and weighted mean confidence intervals are calculated as well. While there are no formal standards regarding the acceptable width of such measure, the range established is often useful in determining the range in which the true level of value is expected to exist. Pursuant to <a href="Neb. Rev.Stat. \\$77-5023">Neb. Rev. Stat. \\$77-5023</a>, the acceptable range is 69% to 75% of actual value for agricultural land and 92% to 100% for all other classes of real property.

Nebraska law does not provide for a range of acceptability for the COD or PRD; however, the IAAO Standard on Ratio Studies establishes the following range of acceptability for the COD:

General Property Class	Jurisdiction Size/Profile/Market Activity	COD Range
Residential improved (single family	Very large jurisdictions/densely populated/newer properties/active markets	5.0 to 10.0
dwellings, condominiums, manuf.	Large to mid-sized jurisdictions/older & newer properties/less active markets	5.0 to 15.0
housing, 2-4 family units)	Rural or small jurisdictions/older properties/depressed market areas	5.0 to 20.0
L	Very large jurisdictions/densely populated/newer properties/active markets	5.0 to 15.0
Income-producing properties (commercial, industrial, apartments,)	Large to mid-sized jurisdictions/older & newer properties/less active markets	5.0 to 20.0
industrial, apartitients,/	Rural or small jurisdictions/older properties/depressed market areas	5.0 to 25.0
	Very large jurisdictions/rapid development/active markets	5.0 to 15.0
Residential vacant land	Large to mid-sized jurisdictions/slower development/less active markets	5.0 to 20.0
	Rural or small jurisdictions/little development/depressed markets	5.0 to 25.0
	Very large jurisdictions/rapid development/active markets	5.0 to 20.0
Other (non-agricultural) vacant land	Large to mid-sized jurisdictions/slower development/less active markets	5.0 to 25.0
	Rural or small jurisdictions/little development/depressed markets	5.0 to 30.0

A COD under 5% indicates that the properties in the sample are either unusually homogenous, or possibly indicative of a non-representative sample due to the selective reappraisal of sold parcels. The reliability of the COD can be directly affected by extreme ratios.

The PRD range stated in IAAO standards is 98% to 103%. A perfect match in assessment level

between the low-dollar properties and high-dollar properties indicates a PRD of 100%. The reason for the extended range on the high end is IAAO's recognition of the inherent bias in assessment. The IAAO Standard on Ratio Studies notes that the PRD is sensitive to sales with higher prices even if the ratio on higher priced sales do not appear unusual relative to other sales, and that small samples, samples with high dispersion, or extreme ratios may not provide an accurate indication of assessment regressivity or progressivity, appraisal biases that occur when high-value properties are appraised higher or lower than low-value properties in relation to market values.

#### **Analysis of Assessment Practices:**

The Division reviews assessment practices that ultimately affect the valuation of real property in each county. This review is done to ensure the reliability of the statistical analysis and to ensure professionally accepted mass appraisal methods are used to establish uniform and proportionate valuations. The review of assessment practices is based on information provided by the county assessors in Assessment Surveys and Assessed Value Updates (AVU), along with observed assessment practices in the county.

To ensure county assessors are submitting all Real Estate Transfer Statements, required for the development of the state sales file pursuant to Neb. Rev. Stat. §77-1327, a random sample from the county registers of deeds' records is audited to confirm that the required sales have been submitted and reflect accurate information. The timeliness of the submission is also reviewed to ensure the sales file allows analysis of up-to-date information. The sales verification and qualification procedures used by the county assessors are reviewed to ensure that sales are properly considered arm's-length transactions unless determined to be otherwise through the verification process. Proper sales verification practices ensure the statistical analysis is based on an unbiased sample of sales.

Valuation groups and market areas are also examined to identify whether the groups and areas being measured truly represent economic areas within the county. The measurement of economic areas is the method by which the PTA ensures intra-county equalization exists. The progress of the county's six-year inspection and review cycle is documented to ensure compliance with Neb. Rev. Stat. § 77-1311.03 and also to confirm that all property is being uniformly listed and described for valuation purposes.

Valuation methodologies developed by the county assessor are reviewed for both appraisal logic and to ensure compliance with professionally accepted mass appraisal methods. Methods and sales used to develop lot values, agricultural outbuildings, and agricultural site values are also reviewed to ensure the land component of the valuation process is based on the local market and economic area.

Compliance with statutory reporting requirements is also a component of the assessment practices review. Late, incomplete, or excessive errors in statutory reports can be problematic for property owners, county officials, the Division, the Commission, and others. The late, incomplete, or excessive errors in statutory reporting highlights potential issues in other areas of the assessment process. Public trust in the assessment process demands transparency, and assessment practices

are reviewed to ensure taxpayers are served with such transparency.

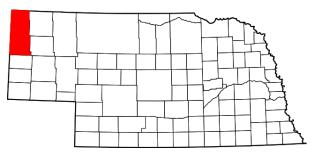

Comprehensive review of assessment practices in each county is conducted throughout the year. When practical, potential issues are identified they are presented to the county assessor for clarification and correction, if necessary. The county assessor can then work to implement corrective measures prior to establishing assessed values. The PTA's conclusion that assessment quality is either compliant or not compliant with professionally accepted mass appraisal methods is based on the totality of the assessment practices in the county.

Reviews of the timeliness of submission of sales information, equalization of sold/unsold properties in the county, the accuracy of the AVU data, and the compliance with statutory reports, are completed annually for each county. If there are inconsistencies or concerns about any of these reviews, those inconsistencies or concerns are addressed in the Correlation Section of the R&O for the subject real property, for the applicable county, along with any applicable corrective measures taken by the county assessor to address the inconsistencies or concerns and the results of those corrective measures.

<sup>\*</sup>Further information may be found in Exhibit 94

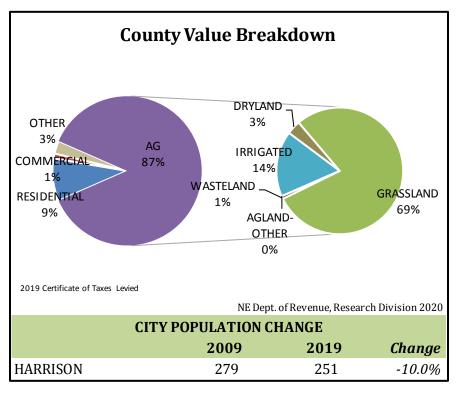

# **County Overview**

With a total area of 2,067 square miles, Sioux County had 1,187 residents, per the Census Bureau Quick Facts for 2018, reflecting a 9% population decline from the 2010 US Census. Reports indicated that 79% of county residents were homeowners and 93% of residents occupied the same residence as in the prior year (Census

Quick Facts). The average home value is \$67,380 (2019 Average Residential Value, Neb. Rev. Stat. § 77-3506.02).

The majority of the commercial properties in Sioux County are evenly disbursed around the county. The U.S. Census Bureau shows there were 15 employer establishments with total employment of 35, a 9.4% increase in total employment from the prior year.

Agricultural land is the largest contributing factor to the valuation base of the county by an overwhelming majority. Grassland makes up the majority of the land in the county. Sioux is included in both the Upper Niobrara White and North Platte Natural Resource Districts (NRD).

# 2020 Residential Correlation for Sioux County

#### Assessment Actions

Assessment actions taken to address the residential property class for the current assessment year included the county assessor monitoring sales to ensure that the cost index and depreciation used are keeping with the market. Also routine pick-up work was completed.

#### Assessment Practice Review

As explained in the Introduction of this Report and Opinion, the review of the assessment practices to determine compliance and the review to ensure that all data submitted to the State sales file is timely and accurate, were completed.

Regarding sales qualification and verification, the county assessor mails a sales verification questionnaire to all buyers of residential property on a quarterly basis. Response rates are typically about one-half returned. For the sales that did not have returned questionnaires, the other party to the transaction receives a questionnaire. The county assessor also utilizes the personal knowledge of the county to supplement the process. Comparison of the county's sales usage is average with statewide average use of residential sales. Non-qualified sales were also reviewed and all had supporting reasons for disqualification. All arm's-length residential sales were made available for measurement purposes.

Residential property is identified as falling within one of two valuation groups, based on assessor location—the village of Harrison and all remaining residential property within the county. This delineation of sales is common since most rural residential sales are within close distance to the Dawes and Scotts Bluff County borders, and the market for these properties is more desirable than the market within the village.

The Sioux County assessor is in compliance with the statutory six-year inspection and review cycle. This is accomplished mainly by physical review, and supplemented by aerial imagery obliques when a new flyover of the county is undertaken.

The cost and depreciation tables are dated 2014, and a lot value study was undertaken in 2012 (the last vacant lot sale occurred four years ago). All residential properties are valued with the same cost index and depreciation tables. With a relatively inactive residential market in the county, the county assessor has found that the application of a new cost index without the application of additional depreciation factors would greatly affect assessed values in the county.

The county assessor has just begun the assembly of a written valuation methodology.

# 2020 Residential Correlation for Sioux County

#### Description of Analysis

Sioux County has established two residential valuation groups based on assessor location.

Valuation Group	Description
10	Harrison
80	Rural residential

The statistical profile for residential property shows 18 qualified residential sales that occurred during the two-year sales study period. Two of the three measures of central tendency are within acceptable range (the median and mean) and the COD supports the median. The PRD is approximately three points above the limit of its prescribed parameters.

A review of sales by study years shows the 18 sales almost evenly divided between years, and the second year median of 102% is the product of one extreme outlier at 122%. Removal of this would bring the second year's median to 99%. By valuation group the 10 sales in the village of Harrison shows two of the three measures of central tendency within range (the median and weighted mean) and supportive qualitative statistics. Valuation Group 80 (Rural) has only seven sales and only the median is within range. Of this small sample, three sales have four assessment sales ratios in the 90% range (91%, 94% and 99%), three sales below 90% (one at 48%) and one ratio above the upper limits of range (103%). No adjustment to this subclass would equalize the majority of values.

Comparison of the preliminary residential values with the final statistics to the 2020 County Abstract of Assessment for Real Property, Form 45 Compared with the 2019 Certificate of Taxes Levied Report (CTL) show virtually the same percent change in residential value.

#### Equalization and Quality of Assessment

Review of all pertinent information, coupled with the assessment practices review shows that the quality of assessment for the residential property class in Sioux County is in compliance with generally accepted mass appraisal techniques.

VALUATION GROUP						
RANGE	COUNT	MEDIAN	MEAN	WGT.MEAN	COD	PRD
10	11	99.36	102.02	100.12	08.88	101.90
80	7	90.98	82.92	80.14	16.45	103.47
ALL	18	96.21	94.59	88.98	12.58	106.30

# **2020 Residential Correlation for Sioux County**

# Level of Value

Based on analysis of all available information, the level of value for the residential property in Sioux County is 96%.

# 2020 Commercial Correlation for Sioux County

#### Assessment Actions

For the current assessment year, the county assessor completed routine county maintenance of commercial property.

#### Assessment Practice Review

As explained in the Introduction of this Report and Opinion, the review of the assessment practices to determine compliance and the review to ensure that all data submitted to the State sales file is timely and accurate, were completed.

The county's commercial sales qualification and verification process consists of a sales verification questionnaire to all buyers of commercial property. Response rates are typically about 50%. For sales that did not have returned questionnaires, the seller then receives a questionnaire. The county assessor also utilizes the personal knowledge of the county to supplement the process. Comparison of the county's sales usage is above average with statewide average use of commercial sales. Non-qualified sales were also reviewed and the one sale had a supporting reason for disqualification. All arm's-length residential sales were made available for measurement purposes.

Two valuation groups, based on assessor location, the Village of Harrison and all remaining commercial property, have been established. These valuation groups delineate the limited commercial market within the county.

The Sioux County Assessor is in compliance with the statutory six-year review and inspection cycle. This is accomplished for commercial property within the village by physical review, and outside of the village is supplemented by aerial oblique imagery.

The cost and depreciation tables are dated 2014, and a lot value study was undertaken in 2010. Commercial properties in Sioux County are valued with the same cost index and depreciation tables. These have not been changed since there is a scarcity of commercial activity within Sioux County.

#### Description of Analysis

Sioux County has established two commercial valuation groups based on assessor location.

Valuation	Description
Group	
10	Harrison
80	Rural commercial

# 2020 Commercial Correlation for Sioux County

The statistical profile indicates three qualified commercial sales for the timeframe of the current study period. The sales ratios range from 63% to 163%. Three sales are too small of a sample to represent the commercial property base of Sioux County. An comparison of the annual value change without growth for the village of Harrison commercial property with similar villages Lewellen, Broadwater, Bushnell and Dix, and Big Springs) in the Panhandle show a five year average that is comparable with the other villages (taking into account complete reappraisals).

A review of the 2020 County Abstract of Assessment for Real Property, Form 45 Compared with the 2019 Certificate of Taxes Levied Report (CTL) reveals a minimal change to the commercial base with no growth. This indicates that the routine maintenance of the commercial property class produced no change to commercial property as a whole.

#### Equalization and Quality of Assessment

Sioux County is in compliance with the statutory six-year inspection and review cycle. Also, all commercial improvements are valued using the same cost index and depreciation tables. The extremely small sample size is not a representation of the commercial base. It is believed that Sioux County adheres to generally accepted mass appraisal techniques.

VALUATION GROUP						
RANGE	COUNT	MEDIAN	MEAN	WGT.MEAN	COD	PRD
10	2	141.35	141.35	138.17	14.65	102.30
80	1	62.83	62.83	62.83	00.00	100.00
ALL	3	120.64	115.18	69.77	27.42	165.09

#### Level of Value

Based on analysis of all available information, Sioux County has achieved the statutory level of 100% for commercial property.

## 2020 Agricultural Correlation for Sioux County

#### Assessment Actions

Assessment actions taken to address agricultural land for assessment year 2020 included the monitoring of pivot irrigated land in agricultural Market Area 2, and the comparison of oblique aerial imagery to current property record cards, for improvements and land use for Ranges 30-35 (Public Land Survey System, PLSS) 30-35.

#### Assessment Practice Review

As explained in the Introduction of this Report and Opinion, the review of the assessment practices to determine compliance and the review to ensure that all data submitted to the State sales file is timely and accurate, were completed.

Sales qualification and verification is accomplished primarily by a mailed questionnaire sent to all buyers of agricultural land. For non-responses, a second questionnaire is sent to the seller of agricultural land. The county assessor also utilizes personal knowledge of the county to supplement the process. Comparison of the county's sales usage is average with the statewide average use of agricultural land. Non-qualified sales were also reviewed and all disqualified sales had supporting reasons for their disqualification. Thus, it is believed that all arm's-length agricultural sales were made available for measurement purposes.

The county assessor has identified two agricultural market areas that define the unique sales characteristics of agricultural land in Sioux County. Market Area 1 constitutes the largest portion of the county and is made up primarily of ranching operations. Market Area 2 is located in the southwest corner of Sioux County and unlike the northern area is comprised of approximately 34% irrigated land and about 64% grassland. The county assessor has not identified any non-agricultural influence in the county.

Improvements on agricultural land are reviewed in the same manner and at the same time as all rural improvements. Review begins via aerial oblique imagery and on-site inspections when there are questions regarding the imagery or additions to improvements. All rural improvements including outbuildings are valued using the same cost and depreciation tables from the county's Computer-Assisted Mass Appraisal (CAMA) System. The last full review of land use was 2016, and is completed by review of a number of Ranges (PLSS) each year.

Both farm home sites and rural residential home sites are valued the same, at \$9,500. The agricultural farm site is valued at \$1,000 per acre.

#### Description of Analysis

The statistical profile for agricultural land in Sioux County is comprised of a sample containing 32 qualified sales, with the median measure of central tendency within acceptable range. The remaining two measures of central tendency are skewed by extreme outliers

## **2020 Agricultural Correlation for Sioux County**

A glance at the sales by 80% Majority Land Use (MLU) by Market Area show the bulk of the sales to be grassland with 26 sales countywide with two of the three measures of central tendency within range and 24 sales in the largest market area, with both median and mean measures within acceptable range.

Comparison of Sioux County's average value per land class acre with surrounding counties shows that all values are generally comparable to adjoining market areas.

Finally, a review of the 2020 County Abstract of Assessment for Real Property, Form 45 Compared with the 2019 Certificate of Taxes Levied Report (CTL) shows a minimal change to total agricultural land. This matches the assessment actions.

#### Equalization and Quality of Assessment

All agricultural dwellings and outbuildings are valued using the same cost index and depreciation tables as those used for all rural properties. Farm home sites carry the same value as rural residential home sites.

Grassland constitutes approximately 89% of all agricultural land acres in Sioux County. The current grassland values are comparable to surrounding counties, and within the acceptable range. Thus, it is believed that the quality of assessment of agricultural land in Sioux County is in compliance with generally accepted mass appraisal techniques.

80%MLU By Market Area						
RANGE	COUNT	MEDIAN	MEAN	WGT.MEAN	COD	PRD
Irrigated						
County	2	102.47	102.47	104.80	21.35	97.78
2	2	102.47	102.47	104.80	21.35	97.78
Dry						
County	2	22.03	22.03	22.01	02.54	100.09
2	2	22.03	22.03	22.01	02.54	100.09
Grass						
County	26	72.26	71.24	66.66	21.19	106.87
1	24	70.98	70.69	65.91	22.58	107.25
2	2	77.88	77.88	77.74	00.48	100.18
ALL	32	70.98	68.17	65.48	27.36	104.11

#### Level of Value

Based on analysis of all available information, the level of value of agricultural land in Sioux County is 71%.

# 2020 Opinions of the Property Tax Administrator for Sioux County

My opinions and recommendations are stated as a conclusion based on all of the factors known to me regarding the assessment practices and statistical analysis for this county. See, Neb. Rev. Stat. § 77-5027 (Reissue 2018). While the median assessment sales ratio from the Qualified Statistical Reports for each class of real property is considered, my opinion of the level of value for a class of real property may be determined from other evidence contained within these Reports and Opinions of the Property Tax Administrator. My opinion of quality of assessment for a class of real property may be influenced by the assessment practices of the county assessor.

Class	Level of Value	Quality of Assessment	Non-binding recommendation
Residential Real Property	96	Meets generally accepted mass appraisal techniques.	No recommendation.
Commercial Real Property	100	Meets generally accepted mass appraisal techniques.	No recommendation.
Agricultural Land	71	Meets generally accepted mass appraisal techniques.	No recommendation.

<sup>\*\*</sup>A level of value displayed as NEI (not enough information) represents a class of property with insufficient information to determine a level of value.

Dated this 7th day of April, 2020.

# **2020** Assessment Survey for Sioux County

# A. Staffing and Funding Information

1.	Deputy(ies) on staff:
	One
2.	Appraiser(s) on staff:
	None
3.	Other full-time employees:
	None
4.	Other part-time employees:
	None
5.	Number of shared employees:
	One
6.	Assessor's requested budget for current fiscal year:
	\$161,211
7.	Adopted budget, or granted budget if different from above:
	Same
8.	Amount of the total assessor's budget set aside for appraisal work:
	\$30,000
9.	If appraisal/reappraisal budget is a separate levied fund, what is that amount:
	N/A
10.	Part of the assessor's budget that is dedicated to the computer system:
	\$14,500
11.	Amount of the assessor's budget set aside for education/workshops:
	\$6,800
12.	Other miscellaneous funds:
	None
13.	Amount of last year's assessor's budget not used:

# **B.** Computer, Automation Information and GIS

1.	Administrative software:
	MIPS
2.	CAMA software:
	MIPS
3.	Are cadastral maps currently being used?
	Yes
4.	If so, who maintains the Cadastral Maps?
	The County Clerk
5.	Does the county have GIS software?
	Yes
6.	Is GIS available to the public? If so, what is the web address?
	Yes. The web address is https://sioux.assessor.gWorks.com
7.	Who maintains the GIS software and maps?
	gWorks
8.	What type of aerial imagery is used in the cyclical review of properties?
	gWorks
9.	When was the aerial imagery last updated?
	2018
10.	Personal Property software:
	MIPS

# C. Zoning Information

1.	Does the county have zoning?
	Yes
2.	If so, is the zoning countywide?
	Yes

3.	What municipalities in the county are zoned?
	Harrison is zoned.
4.	When was zoning implemented?
	2001

### **D. Contracted Services**

1.	Appraisal Services:
	Pritchard & Abbott for mineral interests.
2.	GIS Services:
	gWorks
3.	Other services:
	MIPS for administrative, CAMA and personal property software.

# E. Appraisal /Listing Services

1.	Does the county employ outside help for appraisal or listing services?
	Pritchard & Abbott.
2.	If so, is the appraisal or listing service performed under contract?
	Yes
3.	What appraisal certifications or qualifications does the County require?
	Certification and expertise in the appraisal of mineral interests.
4.	Have the existing contracts been approved by the PTA?
	Yes.
5.	Does the appraisal or listing service providers establish assessed values for the county?
	Yes, for mineral interests.

# **2020** Residential Assessment Survey for Sioux County

Valuation data collection done by:					
unique characteristics of					
roundings.					
of Harrison.					
ket value of residential					
For the cost approach does the County develop the deprecation study(ies) based on the local market information or does the county use the tables provided by the CAMA vendor?					
The county uses the depreciation tables provided by the CAMA vendor.					
Are individual depreciation tables developed for each valuation group?					
Describe the methodology used to determine the residential lot values?					
one vacant lot sale in the					
How are rural residential site values developed?					
ectric service to improve a e farm site at \$1,000 and					
Are there form 191 applications on file?					
Describe the methodology used to determine value for vacant lots being held for sale or resale?

# **2020** Commercial Assessment Survey for Sioux County

1.	Valuation data collection done by:							
	The county assessor.							
2.	List the valuation group recognized in the County and describe the unique characteristics of each:							
	Valuation     Description of unique characteristics       Group							
	10	Harrison: all commercial p	properties within the vill	age of Harrison.				
	80	Rural: all remaining comn	nercial parcels that are no	ot within the village of Harris	son.			
3.	List and describe the approach(es) used to estimate the market value of commercial properties.							
	The cost approach is used.							
3a.	Describe the process used to determine the value of unique commercial properties.							
	There are currently no unique commercial properties within Sioux County.							
4.	For the cost approach does the County develop the deprecation study(ies) based on the local market information or does the county use the tables provided by the CAMA vendor?							
	The county uses the tables provided by the CAMA vendor.							
5.	Are individual depreciation tables developed for each valuation grouping?							
	No.							
6.	Describe the methodology used to determine the commercial lot values.							
	By using the	market approach via comp	parable salesif vacant	lot sales are available.				
7.	Valuation Group	Date of Depreciation	Date of Costing	Date of Lot Value Study	Date of Last Inspection			
	10	2014	2014	2010	2015			
	80	2014	2014	2018	2018			
	Admittedly, the commercial lot value study for Harrison is past the six-year cycle. It should be noted that the market for commercial property in the village of Harrison is virtually non-existent.							

# 2020 Agricultural Assessment Survey for Sioux County

1.	Valuation data collection done by:					
	The county assessor.					
2.	List each market area, and describe the location and the specific characteristics that make each unique.					
	Market     Description of unique characteristics       Area     Description of unique characteristics	Year Land Use Completed				
	This agricultural market area consists of the largest portion of the County and is comprised mostly of ranching operations.	2016				
	This market area is located geographically in the extreme southwest corner of Sioux County and primarily consists of about 34% irrigated or crop-producing parcels and about 64% grass land.	2016				
	The county monitors irrigation by pivot in Market Area 2 on a yearly basis. Also, a comparison of the obliques for improvements and land use are done by range. For assessment year 2020, ranges 30, 31, 32, 33, 34 and 35 were reviewed.					
3.	Describe the process used to determine and monitor market areas.					
	The County Assessor monitors land use in each market area via gWorks maps and physical inspection, and determines the agricultural market boundaries based on use.					
4.	Describe the process used to identify rural residential land and recreational land in the county apart from agricultural land.  Primary use of the land is the major consideration that determines the identity and valuation of both rural residential and recreational land apart from agricultural land within Sioux County. Recreational value is applied by the County to accessory land in parcels where a hunting lodge or cabin is located and/or parcels of land in which the primary purpose of ownership is to provide recreational opportunities.					
5.	Do farm home sites carry the same value as rural residential home sites? If not methodology is used to determine market value?					
	Yes.					
ó.	What separate market analysis has been conducted where intensive use is identified in the county?					
The county contracted with Stanard Appraisal in 2017 to re-value the commercial feed county. Market analysis of feedlot sales in the Panhandle were used to develop a value the head capacity, (at about \$1000/head) and this included pens, feedbunks, aprons, associated with the office and med buildings were valued separately.						
7.	If applicable, describe the process used to develop assessed values for parcels enrolled in the Wetland Reserve Program.					
	There are currently no parcels enrolled in the Wetland Reserve Program.					
	If your county has special value applications, please answer the following					
	11 your county has special value applications, please answer the following					

	N/A					
8b.	What process was used to determine if non-agricultural influences exist in the county?					
	There are no non-agricultural influences in Sioux County.					
	If your county recognizes a special value, please answer the following					
8c.	Describe the non-agricultural influences recognized within the county.					
	N/A					
8d.	Where is the influenced area located within the county?					
	N/A					
8e.	Describe in detail how the special values were arrived at in the influenced area(s).					
	N/A					

### 2019 Plan of Assessment for Sioux County Nebraska Assessment years 2020, 2021 and 2022 June 15, 2019

To: Sioux County Board of Equalization

Ruth Sorensen, Nebraska Property Tax Administrator

FROM: Michelle Zimmerman, Sioux County Clerk/Ex-Officio Assessor

Pursuant to Neb. Laws 2005, LB 263, Section 9, Sioux County Assessor Michelle Zimmerman hereby presents a Three-year Assessment Plan as follows:

Assessment levels for 2019 are: Agricultural – 75%, Residential – 100% and Commercial – 100%.

For the 2019 County Abstract, Sioux County consists of the following real property types:

	Parcels	% of Total Parcels	% of Taxable Value Base
Residential	440	9	3
Commercial	73	1	1
Recreational	7	.001	.004
Agricultural	3934	88	96
Mineral	2	.005	
TOTAL	4456		

Nearly 90% of Sioux County is agricultural land. There are 292 tax exempt parcels. Sioux County had 376 personal property schedules filed on June 1, 2019. There were 36 Homestead exemption applications filed for 2019. For the year 2018, 3 building permits were approved and homes built in the county and added to the Sioux County valuation. For more information see 2019 Reports & Opinions, Abstract and Assessor Survey.

I and two staff members handle all of the personal property returns, we require depreciation schedules be filed with every return and also mailed notices to new property owners in the event that they were not aware of the personal property filing requirement. Staffing has remained the same for 2019, with a full-time deputy and one full-time employee. As Sioux County Clerk/Ex-Officio Assessor, Ex-Officio Clerk of District Court, Election Commissioner, and Zoning Coordinator I cross-train employees to perform other duties that I am also responsible for.

The budget for FY 2018-2019 for Sioux County Assessor was \$154,169.64. Of this budget, \$30,000 was included for contract for reappraisal.

I have completed IAAO Courses 300 and 101, as required by statute. I attend as many Panhandle District Assessor's meetings as possible, as I believe that the networking with other assessors in the area is invaluable. I also have been able to attend the summer workshops offered by NACO in order to gain knowledge and education credits. As

stated previously, I do have a deputy assessor on staff. I will continue to take courses offered through IAAO, NACO and PAD.

Sioux County contracts with GWorks for a web based GIS system. 2016 photos are being used for assessment purposes. Sioux County has entered into a contract to have oblique photos captured in the fall of 2019 to the spring of 2020. We also maintain a cadastral plat map showing ownership. MIPS PCAdmin and MIPSCAMA programs are used for assessment purposes. Property record cards are maintained by me and my staff. The record owner name and mailing addresses are updated from 521's. Pictures are taken when properties are updated and electronically attached to parcels. Current sketches are also attached electronically.

Ownership on all parcels is updated upon review of 521's filed. Sales data questionnaires are mailed to all purchasers of property listed on 521's on a quarterly basis. I utilize data collected, and am also able to use my personal knowledge on sold properties. Sioux County has county-wide zoning in place and requires building permits for residential construction and improvement information forms for ag construction. The Village of Harrison also requires building permits and I receive a copy of those from the Harrison Village Clerk annually. Property inspections and listing are done by the assessor and staff. I also work very closely with Mark Loose, Field Liaison to prepare and review sales ratio studies.

Market approach to value is used on all properties. Sales comparisons are used to compare similar properties.

Cost approach to value is used on residential and commercial properties. For 2018, Marshall & Swift costing was updated to 2014 for RCN.

Sioux County contracted with Stanard Appraisals to reappraise all feedlots in the county in 2018. A total of seven feedlots were reappraised by Stanard.

"Notice of Valuation Changes" are sent out prior to June 1. Levels of Value are published in the local newspaper and in the office.

#### **Level of Value, Quality and Uniformity for assessment year 2018:**

	Median	COD	PRD
Residential	100	8.82	102.68
Commercial	100	28.88	145.74
Agricultural	75	26.39	104.58

### Assessment actions planned for assessment year 2020:

Residential: Monitor costing index to ensure current values are keeping up with market trends. Continue to physically review parcels for changes and monitor building permits issued by the village.

Commercial: Monitor building permits issued by the village. Study sales to ensure that no changes should be made in commercial properties.

Agricultural: Physically inspect properties on which improvement sheets or building permits have been filed. Continue comparison of oblique images of rural improvements. Continue to monitor irrigation pivots in Market Area2.

Comparison of oblique images of rural improvements-Ranges 24, 25, 26, 27, 28 and 29.

### Assessment actions planned for assessment year 2021:

Residential: Monitor costing index to ensure current values are keeping up with market trends. Continue to physically review parcels for changes and monitor building permits issued by the village.

Commercial: Monitor building permits issued by the village. Study sales to ensure that no changes should be made in commercial properties.

Agricultural: Physically inspect properties on which improvement sheets or building permits have been filed. Continue comparison of oblique images of rural improvements. Continue to monitor irrigation pivots in Market Area2.

Comparison of oblique images of rural improvements-Ranges 30, 31, 32, 33, 34, and 35.

### Assessment actions planned for assessment year 2022:

Residential: Monitor costing index to ensure current values are keeping up with market trends. Continue to physically review parcels for changes and monitor building permits issued by the village.

Commercial: Monitor building permits issued by the village. Study sales to ensure that no changes should be made in commercial properties.

Agricultural: Physically inspect properties on which improvement sheets or building permits have been filed. Continue comparison of oblique images of rural improvements. Continue to monitor irrigation pivots in Market Area2.

Comparison of oblique images of rural improvements-Ranges 24, 25, 26, 27, 28 and 29.

I, as Sioux County Assessor, will continue to maintain acceptable levels and quality of assessment throughout the county.
